The reason for this procedure on the part of Austria was, that Count Andrassy was afraid of rousing the Slavs against him, and thus losing his position. Lord Derby's reason was of the same nature. He was frightened to death at the bare idea of affording any pretext for another discussion of the treaty of Paris, and yet had not the courage to avail himself of the rights accorded by that treaty to the signatory powers, to insist upon the proper treatment of the Christians. This conduct was all the more inexcusable inasmuch as Count Andrassy had to consider the very strong feeling of the Hungarians against the Slavs, and against any policy which might lead to an annexation of the revolted provinces.

Thus matters went on. The Slavs of Austria naturally did all they could, in the face of many and great difficulties, to ferment the disturbances, and they made no secret of it. Committees were openly formed all over the country, ostensibly for the relief of the refugees, of course, who passed over the frontier; but, in fact, the government had quite lost its hand over its subjects, and was powerless to check the most flagrant violations of the frontier. In short, Slavism was rampant throughout the country, and the excitement quite intense. This state of affairs continued throughout 1875, till the beginning of spring, 1876, when a certain change took place, due to the action of the Catholic clergy, who were beginning to be alarmed at the dimensions the movement was taking, and the prominent part played by Servia and Russia as champions of the Orthodox Christians. This change manifested itself amongst the Catholic communities of Bosnia, who held more and more aloof from the movement. From the first they played a very cautious game. Possessing great privileges, the Catholic Church in Bosnia was always careful to remain on good terms with the Porte—as, indeed, it is the modern policy of Catholicism everywhere to seek its sup-

port from the government if any way possible. Their action would have been still more decided in favour of the Porte, if hopes had not been entertained that Austria might, at the last hour, consent to the annexation of Turkish Croatia, and part, at least, of Bosnia and Herzegovina. But when the "atrocity" excitement arose, the Catholic Church felt itself exactly in the same position in regard to the Greek Church, as the Church of England felt itself in regard to dissent. For the *Daily News*, having regained its position as the exponent of the views of the dissenting world, and having called its party to the front on the common ground of humanity and Christianity, the Church of England had not the courage to refuse its co-operation, trusting to time and events to bring about a reaction. Thus the Catholics again took a more prominent *rôle* when they clearly saw that Turkish rule was virtually approaching its end.

The leading idea—the Grundgedante—of this policy of the more foreseeing section, and the most influential section of the Croatian party and the Vatican, is to cement the good relations existing between them and Prince Nikita, of Montenegro. There must ever be a rivalry between the two reigning houses of Servia and Montenegro. Both countries claim the mission of re-uniting the Serb provinces of Turkey, and forming out of them an independent kingdom. Both countries may unite for awhile with the object of taking joint action against the common enemy; but when success has crowned this action, under which leader, under which house, are the destinies of the Serbs to be shaped? The Vatican gives the preference to Prince Nikita; Montenegro is to be the Servian Piedmont, and Prince Nikita its Vittorio Emanuale. All sections of the Serbs and Slavs, Czechs, Croats, and Slovacks, acknowledge the disinterested patriotism of Prince Nikita; all foreign nations bear testimony to his single-mindedness, honesty, and tenacity of purpose. He possesses personal qualities of the highest order, and there is no flaw in his escutcheon. There are no such blots on his shield as those that induced the Emperor of Germany to refuse to receive Prince Milan. There are also no rival houses in Montenegro; no Karageorgevitch, and no Obrenovitch, to disturb the peace by their intrigues. Finally, there is in Montenegro a total absence of all the bureaucratic paraphernalia, modelled on the system of a great country, that make the Servian government the prey of endless intrigues and jealousies. There are as many ministers and heads of departments in Servia to 1,200,000, as in Great Britain to 28,000,000 souls; and the same diversity of personal interests, which, from the absence of broad and general views, degenerates from large-party action into tea-party squabbles and scandal. Added to this is the fact that the Servian people would not find the least difficulty in transferring their allegiance from Prince Milan to Prince Nikita, especially if he brought to the union between Montenegro and Servia a dowry, in the shape of Bosnia and the Herzegovina, to establish an independent State with. On the other hand, the mountaineers of Montenegro would never allow their reigning family, which has such just claims to their affection and esteem, to be swallowed up in the vortex produced by the rival houses of the Obrenovitch and Karageorgevitch, or be ousted in favour of either.

But, in addition to these general principles which guided the Vatican, there was another and special idea that led to their adoption. The Catholic Church has already a firm footing in Bosnia and Herzegovina, whilst in Servia it has none; nor is it likely to acquire any as long as St. Petersburg rules at Belgrad. It became, therefore, of the highest importance for the Vatican, that Bosnia and Herzegovina should not be merged in Servia; but, on the contrary, Servia merged in Bosnia, Herzegovina, and Montenegro. A glance at the map shows, that, in this case at least, common sense is on the side of the church. From Budua to the junction of the Save and Unna an arbitrary line has been drawn, cutting a country inhabited by the same races into so unequal a portion, that the western tract is but a mere strip of sea-coast, possessing the largest number of unrivalled ports, for the distance, in any part of the world; whilst the eastern portion, including Montenegro, is entirely cut off from the sea, or from deriving any advantage offered by the splendid littoral Dalmatia consists of. In any case, a more dog-in-the-manger policy never existed than that of Austria, which refuses to give up Dalmatia—a tract, be it remembered, that does not pay for its administration—to Montenegro and the Turkish Slavs; and also refuses to annex these provinces, or

in any way to assist in their development. Austria has not even the plea of strategic necessity for this policy. There is, first of all, nothing for Cataro, Spalatro or Sebenico to defend; and, secondly, not any of the fortifications on the whole line could resist four-and-twenty hours' bombardment. If ever a coast was marked out for peaceful and commercial purposes, it is that of Dalmatia; and one cannot help a feeling of thorough indignation when one thinks that these fair countries, and a steadfast, loyal people like the Montenegrins, are handed over to misery, simply to satisfy the selfish fears and political conceit of a race who are flaunting their pride in the mediæval tagraggery of a by-gone epoch, when brute force was still synonymous with valour and courage, and have nothing to show for their pretensions but a suspension-bridge, built by English engineers; a gilded post-office, that ignores every language but its own isolated lingo; jobbery canals, to reward patriots of the General Türr stamp; steam-ploughs, and other agricultural machines, that have not yet been paid for—a race, in short, that is strutting the political stage in the costume of the 12th century, and playing a masquerade with the national capital of valour and chivalry their fathers won for them ages ago, but which they have done nothing to deserve, as people will find out when the interest on the Hungarian loan remains *in nubibus;* and Baron Rothschild will inform us how much of the last Hungarian loan he succeeded in placing on the market.

Thus both Dalmatia and the Turkish group of Slav provinces are condemned to stagnation, because a turbulent Magyar race "*teremtetes*" and blusters the marrowless, invertebrate assembly, that propagates itself by a process of fission from year to year, under the name of the Vienna cabinet, into acquiescence with its antiquated and retrogressive views. When one thinks of Magyar and Spaniard, one shudders for the peace of eternity; for how these two races mean to settle their claims to the realms of heaven, whence they are descended, and where only their own respective languages are to be spoken, surpasses the comprehension of mortals this side of the bourne. The only hope is that the question will be settled mundanely, in a sublunary spirit of common sense, by reducing their pretensions to a proper level—a sufficient fall, it is certain, for Magyar conceit.

Now, the Vatican plainly seeing that their hold upon one section of the Panslavistic community would be endangered by the merging of Bosnia, Herzegovina, Montenegro, and, as a necessary corollary, of Dalmatia and Croatia into Servia and a Russian outpost or protectorate, worked hard, and with much hope of success, to attain one of two objects—either to procure the annexation of Bosnia, Herzegovina, Croatia, and Montenegro to Austrian Croatia and Dalmatia, as the South Slavic confederation, state, or province of the future, and incorporate Servia with it, or to procure the formation of a similar state, under the rule of Prince Nikita—not Milan—for the reasons above stated. In short, the Vatican strives for the union of these provinces, either outside the pale of Austria or within it, but at any rate united and freed from Hungarian domination, as well as from Russian and Orthodox encroachments *viâ* Servia.

For how long, and with what tenacity, the Vatican and a portion of the Viennese Court has adhered to this policy, may be judged from the fact that the plan was seriously discussed of proclaiming the Archduke Maximilian King of Servia. All the essential conditions were agreed upon between the royal family and the Servian representatives; but the plan was wrecked by the Servians demanding that the archduke should abjure the Catholic and assume the Orthodox faith. Neither the Vatican nor the traditions of the Hapsburgers would sanction such a step; and thus the archduke was obliged to renounce the crown offered to him. The second that was proposed to him he accepted, with the title of Emperor of Mexico. Having lost this one with his life, in the service of the interests of the church, the least she can now do for him is to award him the crown of martyrdom, with the title of St. Maximilian.

CHAPTER V.

'TWIXT CRESCENT AND CROSS.

MEANTIME, in addition to the insurrection in Herzegovina, the rebellion also broke out in the north of Bosnia, more or less along the confines of the Austrian frontier. The state of these districts during 1876 was sad enough, but still nothing like as bad as was commonly reported, chiefly by the correspondents, who were never nearer this part of the country than Ragusa, several hundred miles away. The following account of the condition of this portion of the disturbed regions was written on the spot:—

A couple of hours' ride by rail, through a fertile district, over the rich black soil that lies between the Save, Drave, and Danube, brings the traveller to Sissek, where the railway comes to an end, and the dominion of the Danube Steam Navigation Company commences. True, some five-and-twenty miles further south there exists a fraction of the projected Turkish lines through Bosnia, running from Novi to Banjaluka; or rather, it begins a little this side of Novi, at Doberlin; but from there to Sissek, Hungarian "interests" block the way.

Sissek lies on the Save, close to the junction with this river of the Kulpa, along the valley of which a railway is also projected to Karlstadt, as part of the line it is intended to build from Essegg to Sissek, and thence to Fiume. This line, connecting the Save, Drave, and Danube with the Adriatic, and which will also be fed by the Turkish lines, will be a very important one, and especially benefit Sissek, which is already a busy, thriving town on both sides of the Save, and the terminus for steam-traffic. Like Agram, one cannot help constrasting its busy, work-day appearance with the idling, Sunday-afternoon-enjoyment aspect of the Hungarian provincial towns. Four times have I visited Sissek within the last three years, and each time I have observed unmistakable signs of progress; whilst such towns as Szegeddin and Czegled in Hungary are always the same, and remind one forcibly of the dense duckweed on a stagnant pond unruffled by any breeze.

Here, so close to the scene of action, we might easily expect to hear some authentic news of the events occurring lower down the river. The expectation was not unfounded as regards news of the most startling description. Bodies were floating in the river, minus the heads, legs, or arms, and tied to stakes in an attitude highly disrespectful to the population on this side of the river. In fact, whilst the heads were looking across into Austria, the bodies turned their backs to it. At some points there were said to be seen some unhappy wretches impaled alive, and who had been known to have been writhing in unspeakable agony for three days and nights—a story that I see has been endorsed by Canon Liddon and Mr. MacColl in the *Times*, from personal observation at some little distance. Now, there is no need to exaggerate the horrors of this Eastern war; they are quite bad enough; but I have been up and down the Save three times, not on board a comfortable steamer, but on horseback, zigzagging about on either side the river, and I have not yet been able to see any such horrors as those sworn to by the officials on board the boats, or the atrocity-mongers of Sissek. The mendacity of the Slav in matters political is so stupendous, that to look for the smallest particle of truth, is like pumping the four oceans dry to find one certain grain of sand.

For these reasons, coupled with my own observations, I refuse to believe the tales told about the impalements, &c., along the Save; and were there room for any "belief" at all regarding the statements of Turk or Slav, I would just as soon believe the former as the latter. As an instance of how the deeds of one are foisted on the other, let the following story suffice. At Kobass, on the 24th of June of this year (1876), I was shown the body of an alleged Turk, which was fearfully mutilated; the head was split, cut off, minus nose and ears, and the eyes gouged out. This was a sample of Christian atrocity. But it struck me as rather curious that here, in Turkish Kobass, amidst a Turkish population, there should

be this solitary instance, especially as there had been no fighting in, or reasonably near, Kobass, to bring the body there. I inquired about it. "Oh, Effendum," was the reply, "they did it over on the other side (of the river). The man was a fisherman, and had unwittingly drifted over to the opposite bank, when he was attacked. We heard his cries for help, and went to his assistance, but were too late." "How did you go to his assistance?" I asked, drily. "Five of us jumped into a boat, and fired on the *giaours*, and then they all ran off into the thicket." "How many of them were there?" "V'allah, twenty or thirty!" "And so," I said, "twenty or thirty men fell upon one man, and ran away when they saw five getting into a boat to cross the river! That won't do." Having taken them aback in this manner, I quietly went to the body and examined it, and proved to my own satisfaction, and to the complete discomfiture of the Turks, that the man, of whatever other religion he may have been, was most certainly neither a Jew nor a Moslem. I could mention a couple of dozen instances, at least, where I was led into a wild-goose chase through the plausible lies told me.

The prevailing character of the Save, like the Drave and Lower Danube, is one of loneliness. Arable land and pasture alternate with low and well-timbered hills, the forest oft-times stretching right down to the water's edge. The villages are mostly wooden; many of the houses built on piles, as at Sviniar, where inundations are frequent, and last sometimes three or four weeks. Altogether, the plains, dark forests, and general mud-and-water aspect of the lower grounds between the Danube, Save, and Drave, present an aspect closely resembling the features we are accustomed to associate with the earlier diluvial periods. At some places I quite imagined I had a lacustrine village before me. I could vividly picture to myself the unwieldy forms of a megatherium or an ichthyosaurus characterising the landscape, and bethought me, frequently, of the lines some poet or other attempts to describe the age in:—

> "The 'grey old age' lacustrine Celt,
> To save him from the wiles
> Of bears and wolves, and such like, dwelt
> On lake-surrounded piles;
> And hugging there a wooden pot,
> He gulped a sorry juice—
> To cheer his sad rheumatic lot—
> Of juniper and spruce."

Only in lieu of juniper and spruce, substitute "slibovitz," a spirit distilled from the prune, which forms here the national beverage, and has quite a Celtic flavour about it. The prune, in fact, is one of the chief staples of trade in Slavonia and Bosnia. Every peasant distils his own liquor, the "Finanz" taking care to get the government tax upon the quantity produced.

This "Finance," somewhat resembling our excise, is a peculiar feature of these parts, not only in those bordering the frontier, but also far in the interior. Combining excise with custom duties, and even the collection of taxes, and possessing a military organisation, they form an influential body of men, in virtue of their official character, their superior education, and the patriotic unity prevailing amongst them. They are all Slavs, necessarily so, in order to carry out their duties, and are thus unadulterated with any Magyar elements. Intensely sympathising with the political objects of the South Slav party, they have done, and are still doing, all they possibly can to promote the success of their brethren across the frontier. I am strictly accurate when I say that, for them, the frontier does not exist when it is unfavourable for their friends on the other side. This state of things is very irritating for the Hungarians, but they cannot prevent it. The troops they send down to the frontier, but who are always quartered at some distance from the river, are quite powerless to counteract the "Finanz" interest; nor, to tell the truth, do they try to do so; for the soldier, as I have seen in Poland, Italy, and France, has a strong objection to what he calls "playing the policeman." His business is not preventative, but executive. Thus when Mr. Holmes, British consul at Serajevo, ascribes the Bosnian troubles, in a great measure, to Austrian intrigue, and the facilities afforded to the insurgents in crossing and making use of the frontier, it must be borne in mind that, as I have shown, the frontier does not exist, and that from the very nature of the circumstances, the government has no power in the matter. Being under Hungarian administration, it is quite certain that the Hungarian government did all in its power to keep these districts well in hand, but quite unsuccessfully. For instance, the sale of powder being strictly forbidden within so-and-so many miles of the frontier, the "Finanz"

are the very men who procure it, and facilitate its transit. One of them told me a very good story. The Turks had been in the habit of coming across the river to buy powder, and, of course, now required large quantities. A trader in Gradiska was applied to by a Turkish merchant to procure him twenty barrels, and was told that, as the sale was forbidden, it could only be procured by dealing in it as black sand—the villanous substitute for blotting-paper, and which bears considerable resemblance to powder. Of course the Turk did not care what it was "declared" as, and thus all the bills of lading, &c., were made out for so-and-so much "Streusand." He received his twenty barrels, paid for them, pocketed his bills of lading, customs receipts, &c., went home to Gradiska, and found there that his barrels contained just what the bill declared—sand, and nothing more. Of course he could do nothing; but I would not like to be in that Austrian trader's shoes if his victim should ever get him into his power.

The Hungarians have thus a hopeless task before them if they desire to cut off communication between the two banks of the river. It is a difficult task to accomplish between two different races or nations —*vide* the Franco-Spanish difficulties during the Carlist war. But to draw an arbitrary line of that sort between communities of the same race, and having the same sympathies and interests, is absolutely impossible. One might as well try to draw a line from Portsmouth to Leith, and forbid communication between the denizens of the two halves, whilst leaving the guardianship of the line in these denizens' own hands. Even if there were a sufficient number of Hungarians to take the place of the "Finanz," they could not do it, from ignorance of the language. And if the difficulties are so great on what is called the "water frontier," and which is formed by the Save and part of the Unna, what must they be on the "dry frontier" (Trockene Grenze), running in a zigzag fashion, with bends and twists innumerable, through marshes and forests, over mountains and vales, from Budua, on the Adriatic, to Brod on the Unna?

Thus, though the minarets and mosques on the right bank of the Save, and the Greek and Latin Cross on the left, show that there is a religious division marked by the waters of the meandering river, there is no difference of race, language, or habits, lay and religious customs, between the population on either side, except as regards their condition. Little as there is to admire on either side, one cannot help being struck by the contrast between the neat-looking villages, with their church steeples and belfries, generally two to each village—a Catholic and a Greek one—and the ramshackle, tumbledown hovels along the opposite bank. And, more significant still, whilst here and there on the Turkish side, a handsome villa in an elevated position, tastefully selected, may be seen gleaming out of the foliage, nothing of that kind is to be observed on the Austrian side. Those houses are the residences of the Beys; they take the place of the baronial strongholds of mediæval times; whilst below them, clustering together in human styes, seethes the suffering mass of humanity whose blood and sweat are poured out into the ground in the service of their masters. On the Austrian side, equality seems, on the whole, to characterise the people. Their houses are all, more or less, of equal size, and equally well kept; though, all the way from Sissek down to Semlin, these two are the only places that can fairly claim the title of a town. But, though primitive in appearance to the highest degree, the houses of the peasantry —Austrian side — are comfortable, well suited to the requirements of the people and exigencies of the climate. The better class live very well; meat, fuel, wine, slibovitz, grain, flax, hemp, &c., are all grown by themselves; and where one proprietor is in want of one of these commodities, he resorts to a system of barter with his neighbours. But, like a bugbear, or horrible nightmare, the shadow of Turkish rule weighs heavily on this district, which ought to be the centre of one of the busiest highways in Europe. Navigable for a distance, as the crow flies, of 300 kilometres, the Save almost connects the Adriatic with the Black Sea, the source of the Kulpa not being more than twelve miles distant from Fiume. And, as though nature intended it as an outlet for the produce of Bosnia, it is abundantly fed by the waters of the Glina, Unna, Bosnia, Verbas, and Drina—all of them rivers that are or might be made navigable for barges and small craft, and running through districts rich in the possession of all kinds of vegetable, animal, and mineral produce.

So much for the Save. A famous high-

way to travel comfortably by, from Adria to Hungary and Servia, it is quite certain that the traveller in search of information regarding the war of 1877-'78, must seek it elsewhere than on board the steamers. If the officials are Germans, "Schwaben," or shortaway, "Schwab," they will indulge in wholesale and indiscriminate vituperation of Slav, Magyar, and Turk alike. If Slavs, if Hungarians, then woe-betide the credulous; but if the traveller wishes to know what the real character of the Bosnian revolt was and is, let him visit the villages along the high road that skirts the Save at a distance of some ten miles, say, beginning at Brod and passing, *viâ* Oriovatz and New Gradisca, to Pakratz. There he will see the material "foreign intriguers" strive to excite into revolt. Excite! Not all the intriguers of Europe could produce such a feeling in the Bosniak mind as excitement. Not all the heroes of all ages and nations would be able to screw up the Bosniak's courage to fighting-point. His spirit is utterly crushed. Even that great attribute of mankind, the consciousness of his misery, is absent in the Bosniak. I can say nothing more expressive than this, nothing that speaks such volumes. If it be doubted that this is true, let me point to facts and figures. The Christian population of Bosnia amounts to some 500,000 souls; of these 160,000 are refugees on Austrian soil, and some 40,000 in Servia, where they have sought and found a shelter. Nearly half the population has run away; the other half is cowering, in abject terror, at the foot of the Moslem, who holds their lives, and the bodies of themselves, their wives, and daughters, at his disposal. The Moslem population amounts to about 400,000: they are the most fanatical, tyrannical, and brutal element in the Moslem world. But they, too, are Bosniaks, Slavs by race and by language, and have no more connection with the Turk or Osman, than an Englishman has with a Caffre. It requires far more love for one's neighbour than, at any rate, I possess, to feel any sympathy with such a race—as a race—of which one-half is composed of brutal renegades, and the other half of abject animals, which have been steadily pursuing a course of retrograde development for the last 600 years. By all means extend sympathy and charity to the individual—we even do that to the homeless dog and the abandoned cat—but do not let false sentiment plunge Europe into a war for the sake of such a race. Keep the causes of this degradation well in view, and insist on the removal of those causes, not so much for their own sakes as for the honour and welfare of the rest of humanity. And in regard to the sympathy that is being lavished on these people—Moslem or Christian—I would just ask, leaving out of the question such amiable souls that would weep over the blighted affections of a youthful frog—how much of this sympathy is less with the people than with the country? In how far is this sympathy provoked by the neglected state of the land, and the non-development of its natural resources. The sight of a fertile estate running to ruin through the incapacity, from whatever cause, of the owner, causes a feeling of pity, not for the proprietor, but for the riches thus running to waste. So with Bosnia. Here is a land running to rack and ruin, that might materially benefit millions of people; and it certainly claims our sympathy in this sense, and in a practical form. The question must be approached in a practical, and not in a sentimental frame of mind.

Thus, to sum up matters under the present circumstances on the Save, I find that there is no question between Turk proper and Slav; but that the existing state of things, atrocious or not, has arisen amidst an homogeneous race, and is due to the jealousies and dissensions of the Slavs themselves. We find that here, in Bosnia, one-half of the race, the landed proprietors, became renegades, and identified themselves with their conquerors. The other half, crushed, humiliated beyond description by their own brethren, had but a fraction of personal freedom left them. And this fraction of liberty only helped to produce another division in their broken ranks, and to separate them into two sections, the Orthodox and the Catholic, each of which regards the other with intense aversion, even to the extent of one of them passively uniting with the Moslem.

No sketch of these regions would be complete without a picture of the clerical prince of Croatia.

Not very long ago two men were waiting in the refreshment-room at Mestre for their respective trains. They seemed to know, but took no notice of each other. The one was a tall, gaunt personage, with wiry, grey hair bushing out on either temple, marked features, and small glittering eyes. He

walked with an elastic step, and had all the appearance of a man bearing the responsibilities of a high position, and quite satisfied with the way he was discharging its duties. The other was a short, stout individual, with heavy eyelids, aquiline but flabby nose, and careless, not to say slovenly, in his dress. He, on the other hand, did not impress one with the idea of his being a successful man. On the contrary, he rather conveyed the impression of his being a disappointed man—of what the Germans would call a "Verfehlte Existenz." The former was Joseph George Strossmayer, Bishop of Bosnia, Djakovo, and Syrmia; and the latter was Ernest Renan. The trains came up, and the bishop, the author of Pomponio Leto's "Eight Months in Rome," and the "Letters of Quirinus," went to Rome; whilst the author of the "Life of Jesus" went wandering to Venice. The one had made his peace with the Vatican; the other was still erring outside the pale of any church—a wandering Jew amongst the Pharisees. The one was still a potent factor in the world's society; the other but one of the phantasmagoria of Bohemian life. So, at least, saith society.

As we have said, no picture of South Slavonia would be complete without its virtual, if not declared head—the central figure, in short—that represents the aspirations, capabilities and intellect, the virtues and the failings, of the Southern Slav. It must be remembered that he also represents the Vatican and the Roman Catholic Church, in spite of the views he took, and the line of conduct he pursued, during the Vatican Council. It is well to direct especial attention to this fact, because Canon Liddon and Mr. MacColl, who recently visited the bishop for two days, have certainly misapprehended his political position, and have ascribed principles and ideas to him he is far from entertaining. It is not easy to say how the misapprehension arose—whether the bishop himself caused it, or whether the episcopal splendours of Djakovo occupied too much of the reverend gentlemen's time to correctly appreciate the bishop's views: probably the latter was the case; for two days are scarcely sufficient to master a mind of such intricacy, in spite of his apparent frankness, as Bishop Strossmayer's. Whilst Canon Liddon asserted that the bishop wishes Bosnia to be annexed to Servia, it is just exactly the contrary that is the bishop's desire. In whatever way the error has arisen, it is a fundamental error, and one that nobody could fall into if he had the most elementary knowledge of the question. A moment's consideration will prove that such is the case. Servia is an Orthodox State; Bosnia partially Catholic; and the Vatican opposed *per fas et nefas* to the Orthodox Church, or any extension of its jurisdiction. Bishop Strossmayer, representing the Vatican, could, therefore, not possibly counsel the incorporation of Bosnia with Servia—except, perhaps, as a preliminary step, and in view to future *bouleversements*, which it is just in the interest of Europe to prevent.

With this correction, Canon Liddon's views and opinion that Bishop Strossmayer "probably holds in his hands the tangled threads of the Eastern Question more perfectly than any other man," are quite correct. Quite true, he does. But he pulls them from a specifically Croatian or South Slavonian point of view, and, if he could, would solve the enigma by the light of this view, which just happens to be one of the questions—*i.e.*, whether the disintegration of Turkey is to result in a Croat, a Serb, or a Russo-Panslavonian State? or, whether things are to go on as hitherto after a judicious course of tinkering and re-modelling?

Apart from his personal qualities and talents, Bishop Strossmayer owes his success to accomplishing the most difficult feat of sitting between two stools. Formerly the Court preacher (Hofprediger) of the Burgkapelle in Vienna, he made many influential friends at Court, and was appointed to his present post in 1850; Croatia, from its military services and loyalty, having always enjoyed much imperial favour, especially at that time, when Austria owed so much to the Croatians in suppressing the Hungarian revolution of 1848. Then, a quarter of a century ago, the Panslavistic hydra had not yet reared its countless heads, and Croatia was regarded as one of the mainstays of Austria, to influence which, Hofprediger Strossmayer was regarded as eminently well fitted.

But the causes that made him at that period a *persona gratessima* to the Viennese government, came to an end when Pesth shared with Vienna in the administration of the empire, and shut Croatia out in the cold. The Hungarians would be but too glad could they but get rid of a bishop who stigmatises them as Turks, and worse than

Turks; but the Court and Slavonic party at Vienna are too well aware of his influence not to keep him in his present post; added to which, his liberal views have gained him the support of the anti-ultramontane and anti-concordat parties. At Rome, again, the Vatican would gladly have excommunicated him, as they proposed doing, had he not been indispensable to them from his ascendancy over the Croats. Thus, ecclesiastically obnoxious to the Vatican, politically hated by the Hungarians, he was politically necessary both to the Courts of Rome and Vienna; whilst latterly he has been reconciled to the Vatican, and the past dispute allowed to drop, on the part of the Vatican from expediency, and on his part for the national, *i. e.*, Croatian welfare.

Now Bishop Strossmayer is eminently calculated for preparing the great work that must always precede the unification of crude and diverse materials. If Prince Nikita, in whom the bishop has every confidence, is to be the Vittorio Emanuele of South Slavdom, Strossmayer will certainly be its Cavour. He has laboured for years in the work, promoting culture, industry, and economy, by every means in his power, throughout Croatia. He has largely contributed to an Academy of Art at Agram; under his fostering care literature—national Croatian literature—is flourishing; no Croatian artist applies to him in vain; all men of culture and intelligence are welcome to him; and, if possible, he seeks to retain their services. The amelioration of the condition of the peasantry is constantly before him. In short, there is no subject concerning the progress of the country, from paving a road to founding an academy, to which he does not devote his attention, his influence, and his purse. Add to this his learning; his knowledge of Italian, French, and German; his hospitality, and ways of a refined man of the world, and a courtier; his manly instincts and force of character; his chivalrous enthusiasm for the cause he is engaged in; his diplomatic acumen and political knowledge. Sum all this up, and the result is a perfect Bayard of the church. It would, under these circumstances, seem somewhat ungracious to be obliged to demur to some of the opinions ascribed to him by Canon Liddon and Mr. MacColl; but as these gentlemen have represented him as denying Servian intolerance in regard to the Jews, it may casually be observed that, next to the Magyars, the objects of his greatest aversion are the Jews. But that is such a minor point that it is not worth consideration when discussing Bishop Strossmayer. Suffice it to say that the Croats, under his leadership, consider themselves entitled to assume the hegemony in the South Slavonic state of the future, in virtue of their superior qualities and powers, and would certainly never let themselves be swallowed up by the Serbs.

The daily life of such a man and his surroundings cannot but be interesting, especially when both preserve, in a high degree, the character of ecclesiastical life in the palmy days of its power. We abstain purposely from the word mediæval as used by Canon Liddon, for we quite fail to see what there is peculiarly mediæval about the bishop, his palace, or his surroundings. Nor, from what we remember of Fulham Palace, do we quite see how that building can be compared, externally or internally, to the episcopal residence of Djakovo. It is built in the form of a quadrangle, is one storey high, and surrounds a large courtyard inhabited by a fox, a couple of eagles, and a youthful stork. The basement is taken up with the household offices, stables, &c., a long gallery running round the upper storey, out upon which open the doors of the saloons and rooms occupied by the various officers of the bishop's household, his secretaries, clerks, &c., the chancellerie being on the ground-floor. There are three separate suites of apartments—the grand saloon, hung with the portraits of the former bishops of Djakovo, a billiard-room, and dining-room, leading lengthways away from the front towards the back of the building. Adjoining this suite follows a series of smaller rooms and cabinets, used chiefly for the bishop's guests, the walls of each hung with paintings of various earlier schools, especially Venetian and Tuscan, and of modern Slav artists, all of which are intended as a gift to the National Academy of Art at Agram. To the right of the grand saloon a door leads to the bishop's private apartments, the surroundings of which are certainly more in the style of "the grand monarque" than the others, which are but meagrely furnished, and will be empty when the paintings are gone; whilst the rooms occupied by his secretaries, Monsignore Vorsak, M. Gamperl, and Count Jules de Drohojowski, are of a truly monastic simplicity. A large garden and well-wooded grounds are attached to the

palace; and, in the farther corner of the court-yard, on the right-hand when entering, is the ancient episcopal chapel where the bishop attends mass. Till one o'clock, the episcopal dinner hour, he is engaged in his study, and does not like to be disturbed, no matter by whom, except on business. By that time, however, the guests of the day, and the members of his household, assemble in the grand saloon till he makes his appearance, and leading the way with the chief guest to the place of honour on his right, casts business to the winds, and sets to enjoying himself and delighting the company, which seldom numbers less than a dozen, and generally amounts to twice that number, especially on Sundays and *fête* days, when his table is more than usually crowded. Amongst the guests are the German and Italian artists who are engaged on the frescoes in the cathedral of St. Peter, which the bishop is building partly from funds provided by his predecessors for the purpose, but chiefly from his own pocket. It is a fine structure of bright-red brick in the Italian Romanesque style, the two western towers, surmounted by finely-tapering steeples, and the cupola, being of the same material, and presenting thus a rather peculiar appearance. The crypt and vaults are roomy, and built of solid masonry; whilst the interior, when finished and adorned with the frescoes designed and executed by MM. Zeitz, father and son (pupils of Cornelius and Overbeck, but domiciled in Rome), will bear comparison with that of any of the chief churches in Rome. The visitors are from all corners of Europe; Franciscan friars from Bosnia; officers from Essegg; clerical dignitaries from Agram and Rome; delegates from Dalmatia; artists, authors, and stray waifs from London or Paris, who have remembered the sensation caused by the "wild Croat," as Pio Nono called him, who tried to devour the infallible dogmatists at the Vatican Council. These are the elements which, presided over by a host who knows how to draw his guests out, easily prolong the dinner, with the aid of an excellent *cuisine* and irreproachable cellar, to half-past three or four o'clock. But, be it known, a Slav dinner is no small matter. It must be approached in a spirit of modesty and doubt as to one's capabilities, but with stern determination withal. Not that the viands are so overwhelming in amount, as a general rule; though, on one occasion, no less than forty-seven dishes were served, which took three hours and a-half to work through, being at the rate of one every four minutes and a-half, but on account of the Slav habit of toasting in bumpers of good-sized tumblers. The "Nazdravas" (your health), and the "Zivios" (viva), on such occasions, are something portentous in their frequency. Supposing there are twenty guests at the table, the bishop makes the beginning, and, after a complimentary speech, drinks to your health, to which you bow your acknowledgments, but do not drink in response at once; at the same time he couples your name with that of some lady, present or not. After an interval you rise, and, thanking his excellency, drink with a "Nazdrava" to somebody else's very good health; that person returns the compliment; and thus the toasting goes on and on, till the amount of wine imbibed convinces one that purity, at any rate, exists somewhere, and that is in the bishop's wine —most of it grown on his own estates, which produce some 10,000 gallons a-year. After dinner, coffee and cigars; whilst the bishop, not being a smoker, disappears, and indulges in forty winks, which is rather gratifying as showing, at any rate, one mortal weakness in his armour. But it is not more than forty winks, for he soon reappears for a drive or ride on horseback to his vineyards, park, or preserves, of which he possesses two, one for large, and the other for small game; besides a tract of forest for wild boars. The chief park is divided into two sections by an ordinary fence, separating the common deer from the white deer (*Dammhirsch*), of which there is a herd of 400. Here the bishop amuses himself by taking a shot now and then, but misses on purpose, except when there is a grand *battue* in honour of some high and mighty guest, and proves that he is as keen a sportsman and as good a shot as any Highlander that ever wore a kilt instead of a bishop's apron. Then back to the palace, and supper at 7 P.M.; after which, a rubber with Canon Vorsak and Count Jules de Drohojowski. This goes on till about ten o'clock, and then to bed, where, in his dreams, the bishop still carries on his implacable war against Turk, Hungarian, and Hebrew, and rises at about 5 A.M. in summer, and six in the winter; so that his life is not all play and pleasure.

Yet it is this aspect of his existence that most strikes casual visitors, and produces upon them the impression of "mediæval splendour;" which Canon Liddon ran away with, or which ran away with him, and led him into such statements as that the bishop's "head-servant" is called "Harem Pasha," when alluding to the bishop's "Pandour," an official for out-door work that every nobleman possesses, and who is dressed in the regular Pandour costume of red, blue, or other colour, adorned with an intricate system of brass-plates and bells, and strings and tassels, and whom it would be the height of presumption to attempt to describe. He is truly an important-looking and imposing personage, and appears to have had the same effect with his "Asiatic splendour" upon the Canon, that the beadle, in his scarlet cloak, is intended to exercise on the infantile mind. So far from the title "Harem Pasha," which so touches the Canon's sense of humour as applied to a Roman Catholic bishop's "head-servant," being a remnant of Turkish customs, it is nothing else but a nick-name given to him in reference to a little episode, of which, no doubt, his manly or imposing form was the original cause. Finally, he is not the bishop's head-servant at all. That personage is a demure gentleman in black; and if the Canon gave his parting douceur to the Pandour instead of to him, it is an additional proof of the value of brilliant externals, though it is to be lamented, in this case, for the opinion that will be entertained of the Canon in the servant's hall at Djakovo.

These, it will be said, are very small matters. But if small things are thus misrepresented when it would have been quite as easy to represent them correctly, the other representations must also be taken *cum grano magno—maximo*, in fact. For it must be remembered that the bishop's table is a peculiar institution —a sort of political alembic—that receives a continual strain of crude materials, and distils them over, chastened and purified, for export all over the country, and beyond it. Thus the Canon and Mr. MacColl were wonderfully well rectified in the episcopal sense, and, like the port-wine fortified with a modicum of alcohol, were sent back to England with a tinge of mediævalism to suit stronger tastes. Of course, all such free hospitality always has its object when the host is a public character, and produces its effect, as Lady Glencora has shown us, especially where society is not so scrupulously conscientious as was the duke and her other critics. A Croat, above all, Catholic in all his instincts by nature, Roman Catholic by his profession, diplomatist, politician, and courtier by taste and turn of mind, and an eminently practical idealist, Bishop Strossmayer does not enunciate a single word that has not its well-defined object. His most sparkling anecdotes have a hidden moral, an *argumentum ad hominem* in them; and it is only by continually bearing this in mind, that one can fully estimate the important object he is playing for—*i.e.*, the elevation of the Slav generally, the Croat in particular, and the reduction of the Hungarian influence to its numerical proportions.

It cannot be denied that he has a good case. His special complaints are, that the Hungarians swallow up 55 per cent. of the Croatian revenue for imperial purposes, and only leave them 45 per cent. for educational and public works; that the postal service, the telegraphs, and all other important posts are occupied by Hungarians; that they are abolishing German in the national schools, and substituting Hungarian; that they have allowed the Jews to settle within the quondam military frontier; in short, that Croatia is to the Hungarian government that which Bosnia is to the Turkish. Emancipation from Hungary is his primary object, as a Croat and Slav; and to obtain this object he would enter into any temporary arrangement with Servia, or the young Servian party, to produce the necessary pressure. Turkish misrule is of secondary importance compared to this object. Of course it must go with the rest, but Hungarian misrule must go also, and the Magyars, instead of draining Croatia of its money, pay up their own arrears of taxes, which amount to very many millions, amongst the nobility alone.

Still, with all these administrative drawbacks, the lot of the Slav peasant, even in Turkey, under ordinary conditions, is materially far superior to that of the peasant in any other country, no matter where. The real evil in the rural economy of the Slav districts, on either side of the border, is the absence of a rural middle class—a yeomanry.

But with all its material advantages, rural Slavonia does not present an inviting picture.

A ride from Fiume to Bihach, from Glina to Brod, and a drive from Brod to Essegg, with an occasional detour right and left towards the Save or the Drave, will probably amply satisfy the most ardent investigator in his quest for information. As to the best season for any such expedition, the intending tourist can take his choice of any of the four that constitute the Slavonic calendar. Here they are:—

> Snow, slush, and mud;
> Rain, mud, and mire;
> Wind, dust, and fire;
> Malaria, gnats, and fleas.

These, as far as an extensive experience shows, are the twelve signs of the Slavonic zodiac. They are enlivened by a perpetual chorus of frogs, exclaiming, in an everlasting drone, "What the devil!—what the devil!"—and unable to get on any farther for sheer wonderment as to what the mischief any sane man can want to come to Slavonia for. The dark soil of the country, the rank vegetation, the endless stretches of corn and maize, rising out of an undergrowth of great gourds, the melancholy, shaggy buffaloes, in a sad, pachydermatous enjoyment of their native mud, and the solemn, uncouth peasantry, stalking through their fields like so many grave storks that have lost their beaks, all impress one with a sense of depression and monotony it is vain to struggle against. There is no cheerfulness either in the landscape or its inhabitants. Mud is the characteristic feature of the scene for three parts of the year. And even during those months that, in most countries, impart some light-heartedness and merriment into rural life—during the harvest and the vintage—the only approach to blitheness consists in the music of a ragged gipsy-band, and the songs and dances of the peasantry, which are all three simply horrible in their oppressive melancholy. Of course the peasant is not remarkable for his cheerfulness in any country; the plough takes it out of his back, and swinging the flail is not an intellectual exercise. But he is, at any rate, boisterous at times, and indulges, now and then, in venting his feelings in some strong, hearty fashion; but the Slavonic peasant takes his woes and pleasures in a caterwauling miaouing fashion, which is the acme of mental stagnation. To hear some Slavonic Corydon serenading his Phillis, is the veriest desolation of sound. It seems to be the lament of a maiden cat bewailing, like Jephtha's daughter, her virginity on the top of a deserted garret in a plague-stricken town. The dance of the Slavonic peasant, instead of warming the blood a little, and causing the performer to indulge in the eccentric steps and bounds the German or French peasants delight in, consists in the dancers forming a ring by laying their hands on each other's shoulders, and jumping up about two inches, whilst imparting a tremulous motion to the body by bending the knees on the downward stroke, till they all look like so many animated lumps of quivering jelly. All this is performed to the wail of half-a-dozen violins, each playing a different tune on half-a-dozen notes. Take any six notes of the preliminary screech of violins in Wagner's "Tannhäuser," transpose them into a minor key, play them over and over again, and the effect of Slavonic national melody will be pretty fairly realised.

To make up for this burden of melancholy, the Slav, generally speaking, sets his stomach upon a pedestal, and then straightway falls down and worships it. He is undoubtedly fond of good and abundant food; and, to tell the truth, his *cuisine* is by no means bad, though, like all primitive people's, rather too rich. It is immensely varied, and thus makes some amends for the monotony of his life and the landscape it is set in. As a natural consequence of this monotony, he is also fond of bright colours, and exhibits herein almost as bad a taste as we do, which is certainly saying a great deal. Red, blue, and yellow, in glaring juxtaposition, are, of course, his favourite colours; and on gala occasions, and on Sundays, when the sheepskin jacket is new, and the linen trousers so broad that they look just like petticoats, and are clean and white, there is a certain awkward picturesqueness about the Slavonic peasant of the Danube that still savours strongly of the East, especially in the Turkey-carpet sort of embroidery with which he and his better-half adorn their festive garments. This sort of embroidery—in coarse worsted—is claimed by Bishop Strossmayer as an original Slavic art. As it is the only one the Slavs lay claim to, they may as well be allowed to enjoy whatever reputation it affords them. Otherwise, female Slavonic attire is simple in the extreme, consisting of a jacket of sheepskin, the wool turned inside, and a

chemise, of which one end is generally looped up, exhibiting an expanse of leg and thigh more like the fairy queens and Dianas of burlesque, than what one would expect the prosaic peasant-woman of Slavonia to resemble. And, in fact, there is no romantic foundation for the attire, but, on the contrary, a very material one. The bottomless mud of Slavonia, that forces even the clergy to wear Hessian boots, like so many hussars, would be fatal to shoes, stockings, or petticoats; and thus the bare leg, in its unadorned and natural beauty, is best adapted for progressing through the mire, that curls up, in graceful festoons between the Slavonic toes, to the tune of a constant squish.

This mud has, also, considerably influenced the plan on which the villages are built. The houses, semi-quadrangular, or simply gable-ended towards the street, are built alongside the high-road, forming one long street, so that in populous districts, as between Oriovatz and Brod, one village is scarcely ended before the other one commences. Contrary to what one would expect, the village inns, as a rule, are very fair; the beds are clean, and furnished with a most formidable pile of mattresses. Conveniences, of course, are useless luxuries. The wide expanse of nature is always close at hand. The food, however, is good and cheap. It is not easy to spend more than five shillings a day for board and lodging, including an ample supply of the wine of the country. Especially good and cheap are the poultry, eggs, and milk. Geese and turkeys cost about one florin to a florin and a-half—two to three shillings a-piece; and, to judge from the abundance of the latter birds, one might be well disposed to credit the explanation of Turkey being so called because of the number of turkeys growing there and thereabouts. The milk, being buffalo milk, is very rich, and costs three-halfpence to twopence a quart. A good cup of coffee and a plentiful supply of "Obers" (cream), such as one gets in most of the inns, is not to be despised. Butter and cheese, however, are unknown; whilst, in a country supposed to be devoted to the culture of pigs, it is remarkable how little pork, ham, and bacon are used. Of fruits, the grape, melon, and prune are the chief. Apples and pears are few and bad. Maize takes the place, in the Slavonic kitchen economy, of the potato; but onions and garlic are worthy of Egypt, as well as are the cucumbers. No wonder that the Jews were anxious to settle down in Slavonia, and appreciate its gifts. Not only does it contain the produce of the Promised Land—milk, honey, and wine in abundance, but also that of Egypt in the days of their happiness on the Nile—to wit, the flesh-pots, the onions, the garlics, and the cucumbers, which they seemed chiefly to have sighed for during their wanderings, and impressed upon Moses the fact that the Jewish stomach is a serious thing, and not to be trifled with. Add to this the fish from the Save, Drave, and Danube, the caviare and stewed carp—of which Israel and the monks are so fond—and it will be acknowledged that Slavonia would not be a bad kind of place if the people would but wash themselves sometimes, and comb their hair, say once a month.

As might be imagined, in a country where the cost of replenishing the larder is so slight, hospitality is indulged in on a large scale, and visitors and strangers entertained with the best beds and the best of everything. It is the old story, however—civilisation and the primitive virtues do not combine. The greater the rascality and the swindling, the more highly civilised is the nation. Hence, peculation, robbery, swindling, &c., are very rare in Slavonia; love in the month of May, and slibovitz in the month of January, being the chief causes of crime in shape of battery, assault, and homicide. Swindling the government, of course, does not count: that is rather a "popular" virtue. One of the characteristic features of a Slavonic village is the wells, with their long dipping-poles stretching athwart the sky; whilst on the high-roads, the rail-carts, drawn by three horses, generally at a sharp trot or a gallop, at once remind one of the Russian "Troika." There is also another institution in rural Slavonia, not met with elsewhere—truly and literally, the Wayside Inn. The proprietor of the village tavern is entitled by his licence to appropriate a convenient piece of ground alongside the road, and to furnish it with a primitive hearth of two or more conveniently-lying stones. On each side, and about six or eight feet apart, he fixes a forked stick—fork uppermost, and one opposite the other. A whole pig or sheep is transfixed on a wooden spit, which rests on the above-mentioned forks, and is then roasted before the fire, the innkeeper furnishing the wood for a small sum, and

trusting to the consumption of drink for a "fair profit." This institution is made use of by the cattle-drivers, waggoners, and gipsies; the monopoly being sometimes sublet to the butcher of the place, who roasts his own meat, and retails it to the passers-by, at the rate of about 2*d.* a pound, cooked. This is the only form of impalement to be met with in Slavonia, Turkish or otherwise.

CHAPTER VI.

THE SERVIAN AGITATION.

THE action of the Croats and Slavonians along the confines of Bosnia and the Herzegovina, naturally roused the jealousy of the Serbs, and spurred the Omladina on to redoubled exertions. They were alarmed at the influence which the Croat and Catholic party were acquiring in these provinces. Even the flight of refugees across the frontier into Austria was regarded as most serious, as it gave the Croats an additional claim to consideration in the future. And not only was the alarm felt by the political parties; it was also largely shared in by the clergy, who justly feared the progress which was being made by the Roman Catholics. The attitude of Montenegro also caused great uneasiness, for it was very generally believed that Prince Nikita wished to take the lead in the consolidation of the Serb provinces belonging to, or under the tutelage of, the Porte. At the same time the Serbs in Hungary were straining every nerve to precipitate events. Threatened on all sides by the Croats, by the Germans, by the Hungarians, they felt convinced that, unless Prince Milan adopted a bold policy, they would see Bosnia and Herzegovina cut off from Servia for ever, and handed over to the Croats, whose instinct for their own interests would far outweigh any of the historical ties or the racial relation between them and the Serbs.

Thus, whilst professing the same desires, and asserting their community of interests, there were three distinct parties, each pursuing the same end with different objects.

Bosnia and Herzegovina were the prize. To obtain this prize was the object of Croat, Serb, and Montenegrin alike. The Croats, led by General Rodich and Bishop Strossmayer, and supported by a powerful Court party at Vienna, were opposed by the Hungarians openly and energetically, and intrigued against by Serb and Montenegrin. The Serbs, headed by M. Ristics, and supported by Russia, were equally opposed by the Hungarians, and intrigued against by Croats and Montenegrins. The Montenegrins, however, owing to their peculiar position and the compactness of their interests, enjoyed the most freedom from attack. Supported strongly by Russia, they were temporised with by Croat, Serb, and Turk alike. The principality was not large enough to cause any fear of permanent conflict with Austria, and could always be played off against Servia, or *vice versâ*.

The position of Prince Milan, therefore, when the insurrection in Bosnia broke out, was not an enviable one. To the north and the west of Bosnia the Croats were having it all their own way. In the south, the greater proximity of Montenegro, and the more warlike and sturdy character of the people, threw the Herzegovinians into the arms of Prince Nikita. In the east, on the Serbo-Bosnian frontier, the Turks were in considerable force. They held the fortress of Mali Zwornik, with the line of the Drina, and were in strong numbers at Serajevo, the capital of the province, which, besides, had very strong military positions at Trawnik, Fotscha, Vishegrad, &c. Servia was thus, more or less, out of the running; and, besides, she had no money.

Now, as far as real grievances went, the Serbs had none at all. They paid a very small tribute to the Porte, and were under the protection of the great powers. Between them and the Sultan there were none but the smallest differences. One was the Mali Zwornik question—a frontier dispute chiefly, as with all the rest—entailed by the erratic caprices of the river Drina, which insisted every year or two on altering its course, to spite either Turk or

Serb. Then there was the railway question; but this was less of a political than of a financial question.

There was, therefore, no earthly practical reason why Servia should have interfered in the Bosnian question at all. As for the rhodomontades about sympathy with the oppressed races in Bosnia and Bulgaria, sympathy with the misfortune of others is an unknown quality in Servia. Gratitude, hospitality, charity, the novel characteristics of semi-savage races, are unheard of. All the talk, therefore, of the wars of the insurgent provinces formed but the stock-in-trade of the journalists of the *Obzor*, *Vidovdan*, *Zastava*, *Serbski Novine*, &c., and furnished but the material for intriguers throughout Slavdom to fill their own pockets, and to attain place and position, or to supply the wood for the hobby-horses on which Mr. Freeman and Messrs. Liddon and MacColl pranced to Exeter Hall and Hyde Park after their more arduous ritualistic labours.

The Serbs themselves were quite aware that they had nothing to complain of which might not easily be obtained from the Porte with a little frank consideration; and they knew perfectly well that the possession of a few acres of ground on a disputed frontier border was not worth going to war about, and would not be allowed by the other powers. But when the insurrection in Bosnia arose, the opportunity was eagerly seized by the tuft-hunters and intriguers, and the cry of sympathy and patriotism raised to cover personal ambitious avarice, and, it may be said, the demands of necessity.

The agitation in Servia arose partly within the principality, and partly without.

Within, it proceeded from the considerable number of people who had abandoned agricultural pursuits, and migrated to the towns. The Serb, when he has gained a little education, and become acquainted with the *tingel-tangels* and can-can circles of Vienna and Pesth, conceives a great repugnance to a country life. His ambition is to become a merchant or a statesman—the citizen of a town. He will sell his little patrimony and establish a booth, a commission-agency, or anything that does not require much work, but allows of much talk. But he has little aptitude for commerce, less for industrial pursuits, and is thus left far behind in the race by the Jew and the German. Hence his deep hatred of the two races. Without brains, without energy for practical affairs, he degenerates into an intriguing idler and habitual conspirator. Such is the case in all ranks. To take an instance: Sir Charles Bright purchased a large mining estate at Kutschaina. He employed between 400 and 500 men; but the Serbs were almost useless, and he was obliged to employ Wallachs, Hungarians, and Bulgarians—the latter proving especially useful, and a peaceable, economical body—whilst the Serbs were cantankerous, disputatious, idle, greedy, drunken, and dishonest. The same was the opinion given by the manager of a neighbouring estate at Maidanpek, and by every foreign employer of Serb labour.

There was thus a large number of malcontents, who concentrated naturally in the capital, at Belgrade, and found that patriotism, if properly worked, was a sufficiently remunerative trade. Every opportunity was eagerly seized to stir up the mud and fish in the troubled waters. The railway question furnished these gentlemen with an opportunity. It was generally agreed that this railway was to be built; it was to connect the Hungarian terminus at Basiasch with the Turkish terminus at Mitrovitza; it was to run along the valley of the Morava, and would, no doubt, prove of great benefit to the country. There were no difficulties at all in the way; there was plenty of wood, there was plenty of coal, and the mineral and agricultural riches of the adjoining districts were such as to promise a reasonable profit. The only impediment was the capital. Unfortunately, there had been a Servian timber company formed, which had left an exceedingly diagreeable impression regarding Servia in the Western money-markets, where next to nothing was known of Servia; whilst in the more contiguous money-markets at Vienna, Pesth, and Trieste, far too much was known of the interesting country to allow of a single penny being subscribed for any purpose whatsoever.

Some capitalists, however, such as Messrs. Crawley, Power and Co., and a very large number of invertebrate syndicates, turned their attention to the proposed line, and negotiations were opened up, which all led to nothing. Everybody wanted so many commissions, that the whole of the proposed capital would have been swamped by them alone. Finally, the government itself de-

termined to take up the matter, and try to get a loan for two millions. Agents were, therefore, sent to all the chief capitals—to London, Vienna, Berlin, Paris, Amsterdam, and St. Petersburg. They knocked at the doors of the large banking firms, and based their expectations chiefly on the fact, that Servia had never yet contracted a loan, and was, therefore, unencumbered. These expectations were, however, speedily damped by the very general observation, that Servia's immunity from debt arose, not from her flourishing condition, but from the fact that nobody would lend her anything. In vain did she offer lands, timber, taxes, duties, as guarantee; syndicates, agents, and government all met with the same reply and the host of tuft-hunters, and the flocks' of crows ready to pounce upon the golden prey were bitterly disappointed, broke out into loud complaints, and cast about for fresh fields and pastures new. The immediate result, of course, was dissatisfaction with the government, and especially with the minister of finance, M. C. Mijatovich, who was the chief promoter of the railway scheme.

M. Mijatovich, a mild, gentlemanly little man, with lustrous, melancholy eyes, and habitually attired in a white hat and sky-blue trousers, was a gentleman of considerable education, and had married an American lady twice his size. As one of the consular corps used to observe, M. Mijatovich was thus doubly overweighted—by his foreign connection, and his superior education, which placed him, at a moderate estimation, fully a century in advance of his countrymen. Still, even as the porker of Chicago had ousted the acorn-fed pig of the Servian wilds, and sailed up the Danube in the shape of portly barrels of lard, so M. Mijatovich fancied that he would be able to substitute the ideas of New York and London for those of Belgrade and Kragujevatz; and at the same time he fancied, that with Madame Mijatovich's assistance, he would also be able to convince London what a magnificent future was awaiting Servia. With this intention he caused Madame Mijatovich to write a book about Servia and its prospects. It was a very sober production—so sober, in fact, that it was very appropriately published by the well-known temperance bookseller, Mr. Tweedie; but as it only gave one side of the question, it did not produce the effect fondly hoped for. This was bad enough;

but failing in the railway and loan scheme, M. Mijatovich also managed to displease the very large tribe of "bankers" and money-changers by his manipulation of the old currency when he introduced the new coinage, by preventing the State from incurring a loss for the benefit of these gentlemen. Thus failing in negotiating a loan, failing in providing pickings for the multitude, and even contemplating the introduction of laws to prevent fraudulent bankruptcy, and a few other cherished institutions, such as the oppression of Jews and foreign traders in the interior, M. Mijatovich only retained his position because there was really not the vestige of a reason to attack him.

Thus, for a time, M. Mijatovich, who gave the whole tone to the cabinet, went on projecting reforms of various kinds, and spasmodically making another attempt at a little loan, when the disturbances in Bosnia broke out. This was the signal for the tuft-hunters, for the professional patriots, for journalists' editors, to swarm up like a crowd of gnats on a summer's eve, and buzz around M. Mijatovich's ears. His rival, M. Ristich, at once took advantage of the movement, and summoned the unruly spirits, from near and far, to come in their thousands to Belgrade. And they came. They swarmed into the *cafés* and hotels, into the "Servian Crown," the "King of Servia," the "Hotel de Paris," all in a state of greater or lesser impecuniosity, but with unlimited capacities for the assimilation of solids and the absorption of liquids. There was not room for them all in Belgrade, and many slept in Semlin, on Austrian territory on the other side of the Save, whilst they ate, drank, and conspired in Belgrade. Business of all kind got to a standstill; the creditors clamoured, the debtors complained and cried loudly for the *moratorium*. This broke M. Mijatovich's back; he and the rest of the cabinet resigned, and M. Ristich succeeded him as the head of the war party. Of course the *moratorium*—the suspension of payment of bills of exchange—was granted, and patriotism allowed to run rampant at the expense of the foreign merchants in or out of Servia. Not the least unimportant section of agitators was the host of newspaper correspondents located in Belgrade and Semlin. They were divided into two sections, the anti-Servian and the pro-Servian. The latter remained in Belgrade,

the former in Semlin. The pro-Servians were the correspondents of the Croat journals, *Obzor*, &c., of the Hungarian-Serb paper *Zastava*, of the Bohemian paper *Politik*, and endless writers for the Russian and French press. The English press was represented only for a short time by a correspondent for the *Manchester Guardian*. The anti-Serbs were the correspondents of the Hungarian and Austrian papers, the *Peste Lloyd*, *Budapesti Napilap*, *Ellenör*, *Neue Freie Presse*, &c. All these gentlemen were animated by the fiercest opposition or partizanship, and, as a rule, did nothing but frequent the *cafés* of Belgrade or Semlin, and take their intelligence from the most untrustworthy sources, without attempting to make any independent inquiries. A few put themselves in communication with the consuls; some with the ministers, and such as wished to become ministers; others with the host of adventurers who had come to fish in the troubled stream. But the majority evolved events out of their inner consciousness, according to their desires.

The result of all this was a turmoil and a ferment, of which there were no signs a few miles out of the town. In the country people knew absolutely nothing of what was going on. All that gradually filtered through to them, was a report that the Turks were going to attack Servia, and the government contemplating calling out the militia. The news, however, did not produce much effect, and M. Ristich saw that he would have to adopt other measures to create an excitement. He accomplished this by convoking the Skuptchina in Kragujevatz, the ancient capital of Servia, ostensibly to place it beyond the agitating influences in Belgrade, but in reality to transfer a portion of that agitation into the interior of the country. In the meantime, wishing to keep on good terms with the moderate and conservative party, he offered no objections to M. Mijatovich's becoming Prince Milan's private secretary.

Such was the state of affairs in the autumn of 1875. There was an exceedingly active and unscrupulous war-party, headed by M. Ristich, which was determined to plunge the country into war. "Action" was their cry; in what that action should consist, on what basis it should be taken, they were not at all clear about. The dominating idea was jealousy of Montenegrin and Croat. But they could not determine whether this action should be independent, whether it should be undertaken in conjunction with Austria, with Russia, or only with the assistance of the Omladina. Everywhere there were divided counsels, and, as a consequence, they drifted hither and thither, till they became, more or less, the laughing-stock of all Europe. The consuls were equally undecided and divided. There had been a pretty general three-cornered duel going on amongst them for some time. Dr. Rosen, the Prussian consul, demanded precedence of the French consul, who, in virtue of his title as agent diplomatique, would not yield on the point. At the same time Dr. Rosen had growled with the Russian consul, M. Kartzoff, and refused to be conciliated. At last the other consuls proposed that M. Kartzoff should call upon Dr. Rosen, and Dr. Rosen then return the visit. But, at the last moment, Dr. Rosen refused to receive M. Kartzoff, and the result was, that the incident which had led to diplomatic representations by Prince Bismarck and other ministers, terminated by a friendly communication from Prince Gortschakoff, that Dr. Rosen was a very troublesome person, and had better be sent away from Belgrade. This was done, and the question of precedence settled by Mr. White, the British consul, proposing that it should go by seniority of service in Servia, and not by rank; so that the Greek consul was constituted *doyen* of the consular corps.

This, however, did not bring any real union into the consular body. The indecision of the foreign governments was reflected in the action of their consuls. The only one who seemed to know what to do, and who did it, was the German consul, Count Bray. But then, as he was formally instructed to do nothing but keep his government *au courant* of all that occurred, his task was not very onerous or difficult.

Consul White, on the other hand, from whatever reason, acted in an official and an unofficial capacity. Whilst officially counselling the prince and his ministers to keep the peace and allay the excitement, he at the same time said, that if they followed his advice as a private individual, they would at once take action and declare war. There is no doubt whatever as to this singular action on the part of Consul White. By some it was ascribed to the influence of his wife, a Polish lady. But as the Poles

by no means love the Serbs, and still more hate the Russians, whose policy it was to stir up Servia into a declaration of war, this explanation will not hold water. It was probably due to the turn public opinion was taking in England, and a desire to appear a friend of Servia, which dictated his policy. That it was a fact, appeared not only from the positive statements of Prince Milan and M. Mijatovich, but from his own utterances.

In fact, M. Mijatovich met his unofficial advice with the argument that Servia did not wish to cut herself off completely from Turkey. "Servia," he said, "is far too weak to stand alone; she would inevitably gravitate towards Austria. It is beyond doubt that, sooner or later, the Serbs on either side of the Save and Danube will become united. But it is not to be supposed for an instant that Servia will ever be powerful enough to wrest the Serb districts of Austro-Hungary from the empire. In all probability it will be Austria which will wrest Servia from Turkey. For that reason, whilst we wish to secure absolute local independence and a complete autonomy, we do not wish to snap the thread which binds us to the Porte, and entitles us to claim the protection of the Turkish government."

This was a sensible and intelligent policy. But it did not suit the views of M. Ristich as the apostle of the great idea—of a mighty Servia—of the Omladinist Utopia. Had Mr. White reported in this sense to his government, and had they taken corresponding action, in all probability the whole Servian war would have been avoided, together with the disastrous complications that resulted from it. He may possibly have done so; but nothing appears in the Blue Books to warrant the supposition. On the contrary, in his despatch of September 13th, 1875, he simply encloses a translation of the prince's speech at the opening of the Skuptchina, and the reply of the deputies, as they appeared in the official gazette; whereas it is perfectly well known that M. Ristich induced the deputies to present a secret address to the prince, urging him to take up arms for the prohibition of the Bosnian insurgents. He knew perfectly well that such a document existed, for he was informed of it by M. Mijatovich; besides which, it was also well known that M. Ristich only succeeded, after enormous pressure, in gaining a small majority for the insertion of the following passages in the reply:—

"Verily the present condition of Servia is a very complicated one, as your highness has said; our people are disturbed in their domestic quietness. The large forces collected by the Ottoman Porte on our frontiers, and the hostile attitude assumed by these towards Servia, has compelled a portion of our countrymen on our eastern and western frontier to leave their fields and their homes for the purpose of watching over the security of our country.

"The Servian nation, which has redeemed this dear country with its swords and blood, is mindful of the words spoken by your highness in a proclamation in 1872, 'that it would be a sin to lose the smallest portion of this heritage of our fathers, and it is little enough to our credit that we add nothing to it.'

"These words are engraved on our hearts. The times are serious, no doubt; but no less serious, sire, is the will of the Servian people to rise to the height of the occasion.

"Wherefore, the Skuptchina declares hereby solemnly, on behalf of the Servian people, their readiness, as a nation, to defend their fatherland and its liberties, and to preserve inviolate the inheritance of the great Milosch, and of our fathers: there is no sacrifice which Servia is not ready to make on the altar of the country. At the voice of your highness the entire nation is ready, as one man, to present itself to defend our native soil.

"Sire, the secular sufferings of our brethren in Bosnia and in the Herzegovina, have compelled them to rise in arms and fight for their natural and their national rights.

"The effusion of their blood offends our fraternal feelings. Their cry of despair finds a noble echo in other parts of the civilised world. We cannot, we ought not to remain insensible to their fate.

"The Skuptchina is penetrated with the deepest gratitude at seeing that your highness' conviction is, that these disturbances must be tranquillised by obtaining permanent satisfaction for our oppressed brethren.

"In this patriotic direction you may rely on the support of the Servian people, who are prepared to place at your highness' disposal all the means required to accomplish this great task."

These passages were forwarded by Consul

White to his government on September 23rd, at the same time as he received the official French translation.* But they had been given to him some time before by M. Mijatovich, who translated them for his convenience in the above form, in order that the British government might have early information. At the same time he told Mr. White what pressure it had been necessary to bring to bear upon the assembly, which, by the way, held its sittings with closed doors. Why did not Consul White avail himself then of this opportunity to inform government how matters actually stood?

No doubt Mr. White would deny all this: but it remains a fact all the same. Internal evidence also proves that the above passages were not written by an Englishman. The translation was certainly not made by Mr. Henneage, nor by Mr. Spooner, nor by any Englishman. For instance, "secular sufferings" is scarcely a translation of *siècles de souffrances*—centuries of suffering—as appears in the official French translation.

Nor does the passage, "It would be a sin to lose the smallest portion of this heritage of our fathers, and it is little enough to our credit that we add nothing to it," accurately represent what was really said—*i.e.*, "It would be a serious responsibility to lose the least of what our fathers acquired, and unworthy to add nothing to it." Equally so, the phrase, "These disturbances must be tranquillised," is scarcely English.

In short, Consul White did not make such use of the opportunities offered to him as might have placed the government in a position to appreciate the full significance of the movement which was in progress. Or, if he did, government has successfully kept the secret, and is greatly responsible for what ensued.

It was not until the spring of 1876 that Mr. White began to inform the government of the threatening aspect of affairs. On February 5th, he wrote:—

"Although the echoes which reach this place from Vienna and Berlin, and even from St. Petersburg, are extremely pacific, and would lead one to suppose that political men in the continental capitals look upon the present disturbances in Turkey as in a fair way of being solved in the sense of Count Andrassy's project, it is my duty to report to your lordship, that there are numerous indications in Servia which, unfortunately, point to a contrary result.

"The preparations which have been steadily going on for some months, and which are now prosecuted with renewed vigour; the extraordinary powers voted by the 'Skuptchina,' and demanded by the Servian administration; the activity of numerous unofficial agents, whose connections are well known—all confirm the supposition that something important is in contemplation.

"With the return of spring, a supreme effort will probably be made to enlarge the area of the insurrection, and to delay a pacific solution in the Herzegovina, by importing into the shifting sands of Eastern politics a Bosnian and Servian, and, possibly, a Bulgarian, and other questions."

This despatch was followed up by another on February 17th, which, however, conveyed singularly inaccurate impressions as regards the attitude of Russia towards Servia. He wrote:—

"Ever since the commencement of the present disturbances in the Herzegovina, it has been apparent that the conduct of the Prince of Montenegro has been exercising an influence on the attitude of Servia, and his example has been constantly used as a reproach to Prince Milan in the Slav newspapers published in the Hungarian dominions, and even by violent partisans of the 'Omladina' in this principality.

"The connection of that prince with the origin and duration of the present insurrection is generally believed here, and invoked as a title to popular favour amongst Slavs.

"There are some circumstances in which that prince has been particularly fortunate, and which contribute to invest him with a peculiar reputation of success in the national cause.

"He is said to have secured a loan, whilst Servia, with superior resources, has hitherto failed in contracting one; he appears to have escaped the admonitions of either Russia or Austria for his conduct, whilst Servia received a solemn warning from the great powers last October; more than that, the Imperial Court of Russia has given Prince Nicholas several indications of its sympathy, whilst Prince Milan has had none bestowed upon him since Count Soumarokoff's mission here at his marriage; and even the customary presents granted by

* Turkey, No. 2 (1876), C—1475.

the Czar on those occasions have been hitherto withheld.

"Somehow or other an idea has got abroad that, sooner or later, the Prince of Montenegro would derive actual benefit, in the shape of an accession of territory, concurrently with the termination of the insurrection.

"This supposition, though, as far as I can see, resting upon no basis, acts as a stimulant on the excitable politicians of Belgrade; and having been recently repeated, as if approaching realisation, produced an unusual sensation here, by giving the war party a most welcome and convenient argument.

"I felt it my duty to inform your excellency of this mischievous report on the 10th instant, at 7 A.M., by telegraph, and received a contradiction of it in reply on the 14th instant.

"In the meantime, the Prince of Montenegro considered it his interest to send one likewise to Prince Milan; and I see from the *Times* newspaper of the 12th instant, that he has thought it worth his while to get a similar denial published in a telegram, dated Cettigné, February 11th, disclaiming at the same time 'any discouragement by his government of the insurrection.'

"The despatch of a new special envoy from here to Cettigné had been intended for some weeks previously, and Colonel Ranko Alimpitch was at once sent off in that capacity, with instructions, at the same time, to transmit here regular information as to the conditions and plans of the insurgent forces.

"It is evident, therefore, that an approaching pacification is not anticipated here, and that Servia may be induced, in the long run, to paticipate in the struggle, unless the pacification of the Herzegovina is more prompt and easy than people here are disposed or willing to believe." *

This despatch was followed up by another, of which the following extract is given:—

"I beg to assure your excellency that I have been assured, from a source which I have hitherto found reliable, that the chief reason which has prompted Prince Milan to assume a bolder and quasi-martial attitude, is the growing suspicion in his mind that a bait, in the shape of an accession of territory, was about to be offered by Austria, on behalf of the Porte, to the Prince of Montenegro.

"This opinion is strongly entertained here by persons who are supposed to be well acquainted with the nature of the relations which have existed, during the last two years, between the Court of Vienna and that prince.

"It is admitted that probably Prince Nicholas would be content with a secret promise to that effect just now, and would be willing to wait for its realisation until such time as the insurrection has been completely subdued."

Now, the false impression conveyed in these despatches is produced by the statement that Russia looked upon Montenegro with more favour than upon Servia, and that there was a jealousy of Montenegro in consequence. That is quite incorreet. The jealousy of Montenegro existed long before this period, and was the cause of Russia's displeasure, not *vice versâ*. The Russian agents—who alone were believed, official representations being very properly regarded as only undertaken to keep up appearances—had incessantly urged Servia to war; and it was the hesitation of Servia, which could not make up its mind between following the Austrian lead or the Russian desires, that led to the disfavour the Czar was induced to regard Servia with. At the same time, however, Russia had no special interest in Servia at all. The Serbs were not a race the Russians cared about benefiting. They only required somebody to keep the fire going, and made use of Prince Milan simply as a *pis aller*—a second string to her bow, in case Montenegro should succumb.

This was perfectly well seen through at Belgrade; and there is no doubt but that if Austria and England had combined, Servia would have followed their counsels instead of those of the unofficial Russian agents.

But instead of showing how affairs really stood, Mr. White talks about the Omladina as though it had been a potent factor in determining the policy of Prince Milan. Instead of endeavouring to effect a *rapprochement* between Servia and Austria by showing what influences were at work to estrange the two countries; instead of showing that Count Andrassy, by poohpoohing Servia, whilst allowing the Croats to do what they liked, and by persecuting the Hungarian Serbs to please the Magyars, was really doing his best to urge on the conflict, and inducing the belief at Belgrade

* Turkey, No. 3 (1876), C—1531.

that Austria was thoroughly opposed to Servia, and thinking only of the annexation of Bosnia; instead of showing all this—for which he had ample materials—Consul White did his best to produce the impression that the movement in Servia was a national movement, fostered by jealousy of Prince Nikita of Montenegro. And in conformity with this policy, he repeated the platitudes regarding the doings of the terrible Omladina, which were gravely enumerated by Count Andrassy and others, with the object of showing that society was dangerously threatened by this and other secret associations, which were solidarily united with the revolution.

The Austrian State had nothing to fear from the Omladina, any more than Russia had anything to fear from her secret societies. It suited the government, however, to magnify their importance, pretend that it was endangered by them, yet at the same time making what use they could of them both ways. They were allowed to proceed a certain distance in their agitation, in order to afford the government a pretext for asserting the existence of the question. But at no time was the Omladina beyond the control of the government authorities.

As for the influence of the Omladina on Prince Milan, it was *nil;* it was used by him and his advisers as it was by the Austrians. But in itself, and as an organisation, it had no power whatever beyond what was publicly known, publicly allowed and sanctioned by the authorities.

All this was so well known, that it is simply astounding to read such a despatch as the following, which was sent by Consul White to London on April 28th, 1876:—

"In the political events which are either going on or preparing in this part of Europe, two distinct Slav bodies are likely to exercise no small influence—viz., the *Omladinists in Hungary* and the Slavonic committee in Moscow.

"The *Omladinists are the Slav home rulers of Hungary;* as such, they are hated and despised by the governing (Magyar) class in that kingdom; and hitherto they had shown so defective a political organisation, that their importance arose *much more from their supposed connection with certain parties at Court at Vienna*, and on account of their actual relations with the revolutionary party in the principality of Servia, than on account of any immediate influence as agitators in Croatia, Dalmatia, or Slavonia. Actual events are foreshowing a change in this respect.

"From 1849 to July 1875, *these Slavs* were chiefly aiming at the attainment of a recognition of certain home-rule prerogatives, by means of their opposition to Magyar or Hungarian supremacy. With that view they took up arms under Jellachich for the Emperor Francis Joseph in 1849, opposed the restitution of the ancient Hungarian constitution till 1867, and have carried on a more or less factious constitutional opposition to the dominant party since that year.

"But the sympathies which *the Southern Slavs* were able not only to set forth openly, but also to which they could give practical effect during six months, in favour of the insurgent Slavs in the Herzegovina, have modified *their position,* and the aspirations of *that race have acquired fresh vigour from the Adriatic to the Drave, and from the Drave to the Theiss and the Save,* by giving them a cohesion and a common bond of hope, by making them view the cause of the Turkish rayahs as their own, and their emancipation from Ottoman rule as an object of primary importance for Austrian Slavs, by which they can attain an influence which they have not had for centuries, and which they have hitherto sought in vain on the hustings or in parliamentary assemblies.

"Their proximity to the scene of the insurrection has enabled the Croats and Dalmatians to give the insurgents far more real assistance than they can have derived from Servia, and the public men of the latter principality have seen themselves gradually ousted by these, and by the Prince of Montenegro, from the leadership of the national cause, which Servia considered hitherto as its peculiar mission and attribute.

"The Slavonic committees in Russia, and especially the central one at Moscow, have contributed a good deal to propagate sympathy for the insurgent cause in the Russian empire, and to collect funds for the support of that cause."

Consul White here makes the surprising statement that the Omladina and the Croats, and the rest of the Austrian Slavs, were working together for one object, whilst, as we have shown, they simply made use of the same means to attain different objects.

He ought to have pointed out that the Omladina differed essentially in its objects from the Croat party; that its importance

only arose from whatever connection it had with Servia; and that, far from being connected with the Court party at Vienna, in the sense of being supported by that party for the attainment of its particular object, it was only used by the Court party in so far as it might assist the Croat and Catholic movement.

Consul White must have known all this; and certainly he was aware of it the same day he wrote the above despatch; for there is another despatch from him, dated the same day, April 28th, in which the following passages occur:—

"The prince takes no pains to conceal that more than ever he considers a collision with the Porte as within the range of possibilities; but he continues to disclaim, at the same time, any intention to act as the aggressor. He pointed out to me, the other day, that that portion of Bosnia which is conterminous to Servia has been entirely free from armed bands since last November, when the Papas Zarko was repulsed into Servia, whilst the insurgents, who had within the last few weeks made their appearance on the river Unna, between Bihatch, Novi, and Kostainitza, were all in proximity to the Austrian frontier, and he *defied any one to show that Servia had been instrumental in fostering insurrection in that part of Bosnia*, though he added that such an accusation had been made somewhere, evidently alluding to Austrian authorities.

"Indeed, it is generally believed here that this last rising in that part of Bosnia which I have described above, and which is generally known by the name of Turkish Croatia, owed its main support to *Austrian Slavs*.

"Whilst the above are, no doubt, the views of the most influential persons in this principality, corresponding military preparations are carried on unremittingly with immense care and attention; and although the purchases of stores of different kinds are contracted for on a scale corresponding to the smallness of the resources of this juvenile State, most of these indicate by their nature the contemplation of a regular warfare at no distant period, and payments for them have well-nigh exhausted the small supplies of cash which either existed in the treasury a few months back, or which have accrued to it since. It does not appear that any means have succeeded, up to this moment, in providing for a mode by which it would be possible to replenish the exchequer before it is thoroughly drained—a moment which cannot be far off.

"The delivery of some of the stores will not be supplied by the contractors till May, and to the end of June; and the intended purchase of horses in Bessarabia having turned out a total failure, on account of their high price, these are brought daily across the Danube from the inundated districts of Hungary by dealers, and those that are approved of are bought by the war department.

"All these facts would lead one to suppose that a regular campaign was in contemplation; the militia has been divided in six divisions, and all the arrangements of this new organisation are, I believe, sufficiently advanced to enable Servia to enter the field at very short notice, and perhaps even before all the preparations are fully completed, should it be considered advantageous to do so.

"In conversation with the foreign representatives, persons in authority tell us that all these preparations have a purely defensive character, and that the advent of the war party in the councils of the Sultan might, at any moment, expose Servia to an attack, and her prince to the merited reproach of his people, were he to leave such a danger out of his calculations.

"Thus much I may say, that I have not met a single politician of any note in Servia who did not contemplate, sooner or later, hostilities with the Porte—*not with a view to independence, but for the purpose of the acquisition of Bosnia, and through the deeply-rooted desire of making the present principality the nucleus of a larger Slavonic State under the suzerainty of the Porte, as long as European Turkey forms a compact State.*

"All are unanimous and agreed on this subject without exception. A few entertain a faint hope that the same result might be attained by negotiations with the Porte if any of the great powers could be made favourable to such a project; but not even these exclude an appeal to arms altogether from their calculations; so that it may be asserted without hesitation, that the only differences existing amongst Servian public men in this respect are as to time, and appreciations of the fittest opportunity."

This proves amply that it was well known at Belgrade, in all circles having any

knowledge of the facts, that the two movements, the Croat and the Omladina, though moving side by side, were really opposed to each other. In fact, they were rival suitors for the fair lady Bosnia, whom they were equally intent on delivering from the hands of the Turk. Now, why did not Mr. White clearly state the circumstances long before? And how is it that he did not state, in 1875, that "not a single politician of any note in Servia wished anything but the development of Servia under the suzerainty of the Porte," but left this important intelligence till 1876, when it was too late? He cannot even plead ignorance; which, though it would not be to the credit of his employers, would, at any rate, absolve him to a certain degree. He was repeatedly informed of the true state of affairs. In strong contrast to his habits in Warsaw during the Polish insurrection, when he kept the doors of the consulate double-locked, barred, and chained, in Belgrade he kept open house, and was fully informed, from hour to hour, of all that passed.

Now, having drawn a line between the Croats and the Omladinists, it will be easier to define the precise relations of this terrible body to Servia, and to appreciate the influence it is said to have exercised on affairs at its true value.

It was, in fact, a three-headed monster. The one head was Svetovar Milatics; the second was Karageorgevitch; the third was "General" Stratimirovitch. Each of these three despised the other, and repudiated all association with each other.

"General" Stratimirovitch is a descendant of the Patriarch Stratimirovitch, under whose auspices, a couple of centuries ago, a large number of Serbs fled from Turkey, and, seeking refuge in Austria, formed a considerable portion of the ancestors of the Hungarian Serbs. In 1848, Stratimirovitch rendered considerable service in the campaign under Jellachich against the Hungarians, and was promoted to the rank of general. In reward for this, and for services to the emperor of a more personal nature, he was presented with an estate, and granted a certain sum of money. But estate and money soon disappeared, owing to his intemperate habits and gambling propensities. After awhile, circumstances arose which resulted in his being cashiered; henceforth he was never mentioned but with contempt, and with shrugging of shoulders, which is more significant than words. For years he dragged on a hang-dog existence, always on the look-out for something to turn up. That "something" appeared, as he fondly thought, in the shape of the Bosnian insurrection and the imminent action of Servia, as was generally expected. So Stratimirovitch, resuming his title of general, proceeded to Belgrade, and made the most tempting offers to Prince Milan and his ministers. He was accompanied by a consummate rascal and notorious brawler, a man called Rankovics, who was his general factotum, his "gallopin," and called himself the "General's" secretary. Others of a similar stamp followed him to Belgrade, where he established a regular recruiting bureau. The Servian ministers, much as they disliked the personal character of the man, nevertheless entered into negotiations with him as much to keep him in sight, and prevent his doing any mischief elsewhere, as for any other reason. At the same time they had a sort of idea that his military experience might be useful, as there were no officers in the Servian army, of his rank, who had had any experience of actual warfare. The commander-in-chief, General Zach, was, first of all, an aged man, a very amiable man, indeed, but untried in the field; and secondly, he was a Bohemian, and not a Serb. So Stratimirovitch was provisionally accepted for a command, and supplied with a moderate amount of money to enable him to keep himself and his family of several children, who had accompanied him to Belgrade, and to gather round him a number of penniless individuals and adventurers from all the four quarters of the globe.

The second Omladinist chief was Karageorgevitch. This person, popularly supposed to have caused the assassination of Prince Michael, was protected by the Hungarians and Austrians as a useful card to play against Prince Milan in case of necessity. But when the insurrection broke out, he determined to play a game on his own account, and, recruiting a body of men at his own expense, made periodical expeditions across the border whenever an opportunity offered to raise a few head of cattle, when there were no troops in the way. His chief object, however, in these expeditions, was the distribution of a number of medals, on one side of which

was his own effigy, and on the other the motto, "Liberty, Fraternity, and Equality." With these medals, and a proclamation calling upon all the Slavs to appear at the unfurling of the banner of their emancipation on the plains of Kossovo, where the conquest of Servia by the Turks was accomplished, Karageorgevitch expected to be able to establish a great Servian republic on the ruins of the house of Obrenovitch. But Kossova was unfortunately a long way off, and right in the midst of the Paynim's territory, so that neither medals nor appeal were sufficient to rally the Servian braves round the banner which Karageorgevitch may, or may not, have had ready to unfurl. On the other hand, both medals and proclamation furnished the material for diplomatic representations, and afforded Count Andrassy an opportunity to direct Sir Andrew Buchanan's attention to the difficulties which the imperial government had to contend with. What with the Omladina, what with the refugees, and what with Karageorgevitch, the poor count really did not know what to do. He was badgered on all sides, and even Prince Milan called him to account for allowing the Pretender to pass and repass the frontier without molestation. And insult was even added to injury; for when Prince Wrede, the Austrian consul in Belgrade, following Count Andrassy's instructions, declared that the Hungarian government would be only too glad to intern Karageorgevitch, as they had Liubibratich, if they could only find him, the Servian authorities offered to lend Count Andrassy one of their own detectives, who was able to follow all his movements. However, Karageorgevitch's expeditions had no further result than the above representations, and a despatch from Sir Andrew to the Earl of Derby, to the effect that 4,000 of the medals had been distributed amongst the Serbs in Bosnia and the adjoining districts of Servia. Now to show how small beginnings lead to great ends in the diplomatic world, as elsewhere also, it may here be mentioned that these famous medals were the speculation of a clerk in a mercantile house in Karlova, of the name of Veslin. Following the custom in the Nüremberg and Birmingham trade, of providing buttons, studs, snuff-boxes, &c., with the portraits of celebrated men, he had had a number of these counters made on the chance of selling them amongst the admirers of Karageorgevitch, who, unlike the "unfortunate nobleman, had no brains but plenty of money," and was himself Veslin's chief customer. It was a cheap and facile way of attaining notoriety, and of bringing his name before the general public, as well as within the Foreign Offices of the European capitals, and even into the numismatic collections in the museums of Pesth and Vienna.

This is probably as much as most people will care to know about the proceedings of the Karageorgevitch Omladina. Still, be it remembered, it was regarded as one of the questions, and really seriously discussed by statesmen and diplomatists with portentous gravity.

The third, and chief of the Omladinists, was Svetovar Miletics, one of the Serb deputies in the Hungarian parliament, and proprietor and editor of the *Zastava*, a Serb paper published in Neusatz.

Neusatz, it may be mentioned, is a flourishing little town opposite the frowning walls and ramparts of the celebrated fortress of Peterwardein, and one of the great centres of the Serb colonies in Hungary. It drives a considerable trade in grain, wine, &c., and is altogether a progressive place. A little further down the river we come to Carlovitz—better known to the British public through Max Greger's advertisements of the red wine, grown on the slopes of the hills which surround it; but of high importance to the Serb population as the seat of the Serb patriarch, and as surely also an important centre for Serb agitation. Still further down the river, an hour's distance by steamer, past Belgrade, at a little way up the river Temes, lies Pancsova, also a great centre for the "Omladina," and represented in the Hungarian parliament by D. Michael Polit, an intimate friend of Miletics'. North-west of Pancsova, and on the railway from Bosiasch to Pesth, lies Verschetz, the fourth focus of Serb agitation. The country in between these four places is the home and birth-place of the Omladina; and between these towns and Belgrade and Semlin, there was a constant communication and agitation going on. The agents of the Omladina would start from Neusatz, proceed to Belgrade by steamer, thence continue to Pancsova, on to Verschetz, and then across country back to Neusatz, or to other minor places in the interior. A constant ferment was going on. At Neusatz,

the brother of Dr. Michael Polit, a hosier and linendraper, was one of the chief agents and forwarders of goods, circulars, proclamations, &c. He occupied in Neusatz just the same position as his fellow-hosier, M. de Soubras, the Carlist agent at Perpignan, and sold patriotism by the piece or the yard, and sedition by the bale, and "Miletics' buttons" by the gross.

All through this region there was an atmosphere of mystery and conspiracy; an oppressive sense of something always going to happen. Men gathered into knots, and engaged in eager conversation, which was immediately hushed on the approach of other groups. First-class passengers in the boats conferred mysteriously with steerage and second-class passengers; and mysterious people always came down to the landing-stage when the boat arrived at any of the stations, and held more mysterious commune with the travellers. In short, it was a perpetual Guy Fawkes' day, and everybody expected, or affected to expect, that there would be a tremendous explosion, which somehow or other would blow up all Hungary, Turkey, and portions of Austria and Roumania, and leave all that was worth leaving in the shape of the mighty Servian empire.

Of this state of things, Count Andrassy, M. Tisza, Count Beust, and the whole host of kindred diplomaticuli made immense capital. "The Omladina! the Omladina!" was their perpetual exclamation. The *Politische Correspondenz* was full of its doings; Lord Beaconsfield even shook his head when it was mentioned; and it was classed with the rest of the secret societies which have played an important part in the world's history.

Yet there never was such a wind-bag of an association as this same Omladina. As an effective political body it had no more substance than a pastrycook's flour-bag, and could produce no further practical result than one of these same bags when little Tommy puffs it full of wind, and explodes it between his hands, highly delighted with the consequent bang. The slightest puncture was sufficient to make the whole concern collapse.

Still it was pretended by the heads of the State that it was a most dangerous society; and this impression, owing to the childish affectation of mystery its members observed, rapidly gained ground, fostered, as it was, by the government authorities and the Magyar irreconcilables, until the excitement became so great as to allow of the arrest of Dr. Svetovar Miletics on a charge of high treason, and his imprisonment in the fortress of Buda Pesth on July 6, 1876, a few days after the declaration of war by Prince Milan against Turkey. Here Miletics remained until January 8, 1878, without being brought to trial. It was universally acknowledged at the time that this measure was one of "precaution." The government had played long enough with the Omladina, and had allowed it to assume the proportions of a "question," convenient to the policy of the government; but, having accomplished its work in this sense, it was decided to prevent any chance of its really becoming, what it pretended to be, an association of practical importance.

Now, no better picture of the Omladina exists than that presented at the trial of Dr. Miletics on January 8, 1878. Be it noted that the whole power of the Hungarian government, the whole energy of the police, and the services of a host of spies, had been put into motion to obtain evidence against Dr. Miletics, and that the prosecution had over eighteen months to prepare its case.

The accusation against Dr. Miletics was that he had excited hatred amongst the Serbs against Hungary, and enmity against the constitution and the integrity of the State.

The first witness called was George Rankovics, who stated that in June, 1875, he went to Belgrade to take part in the war which the Servian government was contemplating against the Turks. But as the Servian government could not make up their minds as rapidly as the state of Mr. Rankovics' finances rendered desirable, he entered the service of General Stratimirovitch, as "secretary, and for all other services."

He declared that, in June, 1876, Dr. Miletics arrived at Belgrade, where he made a speech in the room No. 9 of the hotel, *King of Servia*, in the presence of a number of Serb patriots. In the course of this speech, Miletics, according to Rankovics, declared that there were 20,000 to 30,000 volunteers in the Hungarian districts of Banat, the Bácska, and the Servian military frontier, ready to take up arms and assist Servia in her war against Turkey; that in order to enable these

volunteers to pass into Servia, a rebellion in Hungary would have to be arranged, and that for this purpose Servia would have to supply money and arms—though, as for arms, there were, perhaps, enough already in the country. To this purpose Miletics declared that all present would devote their whole energies, and that, if Servia should be victorious, she would wrest the Serb districts from Hungary, and unite the Banat, the Bácska and Syrmia to one great kingdom, under Prince Milan. After having made this speech, Miletics and his friends, Professors Boskovicz, Kassopinovich, &c., went to M. Ristich, and, declared Rankovics, remained with him in conference until 3 A.M.

In reply to the judge, as to whether he himself was present, he answered in the negative; but said, "he knew it."

"And," asked the judge, "why did you leave Belgrade?"

"I had had enough of the beggary and rubbish. I did nothing but indulge in dissipation, and I saw no money coming in." He then went on to say that the Servian government had spent 30,000 ducats amongst the Omladinists; and on being asked by the judge whether the Omladina still existed, he replied that he had doubted it, but that now looking around him, he saw that all the witnesses arrayed against him were Omladinists. "How do you know that?" inquired the judge. "Because I do!" was the unanswerable reply. On the other hand, when Dr. Polit cross-examined him, and asked whether Stratimirovitch was a friend or an enemy of Dr. Miletics, he shouted, at the top of his voice, "How do I know?" and when reproved by the judge for his violence, declared that he could not help it, as he was naturally violent, and not responsible for his nature. All this called forth loud bursts of laughter from the Serbs, so that the judge was obliged to interfere, and threaten to clear the court.

In reply to this accusation, Miletics categorically denied everything Rankovics had said about the alleged meeting, and that he had never seen the man to his knowledge; and, in reply to the judge, stated that he went to Belgrade to assure the prince that he was not opposed to him, and that the opposition to his government was dictated by conscientious motives, and was by no means antagonistic to Prince Milan personally, nor to his dynasty. As a matter of fact, his doubts as to his reception were so great that, at first, he intended to sleep in Semlin, but that ultimately he went to Belgrade, and took up his quarters at the *Servian Crown*, and never put his foot inside the *King of Servia*, where he did no more than drink a glass of beer at one of the tables outside the hotel. Both these houses, in fact, are on the promenade, just before the citadel; one is at one end, the second at the other end of the same block of buildings, and both are the resort of the Belgrade *beau monde*, which assembles at one or the other to drink beer and sup to the strains of the gipsy bands. As for room No. 9, in the *King of Servia*, at the very time when he was supposed to be holding his seditious speech, it was occupied by Senator Gravitovics. These declarations of Miletics were fully confirmed by a host of witnesses, who swore that Miletics was never in the hotel, who accounted for all his time during the three days he was in Belgrade, and had never heard of the alleged meeting in the *King of Servia*.

Rankovics, however, insisted on the truth of his assertions; and when several witnesses proved that he had declared in prison, where he was confined after his escape from Belgrade, that he had threatened to denounce so many people that the prison would not hold them all, he shouted, "That's a lie! I was only savage at being arrested for a political crime, and at being shut up in one cell with 1,000 bugs and five million fleas!" This led the way to some inquiries into Mr. Rankovics' antecedents, when it was established that he had been condemned to six months' imprisoment for rape and assault, and had also been accused of forgery: this charge, however, had been dropped by the prosecution, consisting of his brother and brother-in-law.

In addition to this, the authorities of his parish stated, officially, that he bore a very bad character, had always lived a dissipated and immoral life, and had frequently been punished for breaking the public peace. In short, he was an unmitigated scoundrel.

So much for George Rankovics and his testimony.

The next witness was a certain Kornel Jovanovics. Mr. Jovanovics, a book-keeper at Beckskerek, was so moved in his patriotic soul at the woes of the Christians

in Turkey, and the refugees in Austria, that when he heard that Miletics had returned from Belgrade, he went to ask his advice as to a project he, the patriotic Jovanovics, had conceived, of collecting funds for the benefit of the wounded and refugees. His examination and cross-examination throws such a vivid light upon the whole affair, that it will be highly interesting to read it *in extenso*.

President: "What was the object of your journey?"

Jovanovics: "The collection of funds for the benefit of the refugees and the Christians in Turkey."

President: "Not their liberation?"

Jovanovics: "No; only for the refugees and the wounded."

President: "Why did you go to Neusatz?"

Jovanovics: "I had a brother there, Dr. Jovanovics, and I went to him, and other acquaintances, to ask them for advice. I also requested them to get up a subscription to defray the expenses of my journey; and it was by their advice that I appropriated 100 florins out of the subscriptions I received for that purpose."

Dr. Lassky: "In your preliminary examination, you said that Dr. Miletics had recommended you to undertake your subscriptionary journey."

Jovanovics: "During this inquiry I was very ill with the fever, and often signed the protocols without reading or understanding them. They are, consequently, incorrect."

President: "You also received a visiting card from Dr. Miletics, on which we find your name in Miletics' handwriting. What did he give you that card for?"

Jovanovics: "I wanted it as an introduction to people I did not know personally. I did not tell Miletics so; but simply asked him to give it to me, and he complied with my request."

Judge: "How did you know that Servia was in want of money?"

Jovanovics: "I read it in the *Serbski Novine*."

Judge: "But in your preliminary examination you said that Miletics had told you so, and that he had promised the prince to 'place' 100,000 to 500,000 florins of the Servian loan, and that you were going to get it taken up in Hungary?"

Jovanovics: "I meant to place more than 500,000. But Miletics had nothing to do with it, nor did he tell me anything about it."

In reply to a question by the judge as to the object with which he had written various names down on the card in question, he said that he had written one because the person in question had been killed in the war, and the other because it was such a very funny name. The rest were those of people who had "fled" to the Herzegovina.

Called upon by the judge to explain his connection with Jovanovics, Miletics said that he did not remember giving him any card; on the contrary, he was certain he had not done so; and that it was more than likely that Jovanovics had procured it from his brother, upon whom he, Miletics, had frequently called. Anyhow, it was publicly notorious what part Jovanovics was playing; and that his journey was no secret. He had received leave of absence from his chief to collect subscriptions and push the sale of a book he had written, when he was arrested on a charge of agitation.

Hereupon the examination of Jovanovics was resumed, and Rankovics confronted with him. He denied having told Rankovics, with whom he had been imprisoned, that the Omladina still existed. The Omladina was dissolved. It was a literary society established in Verschetz, with the sanction of the authorities.

Dr. Miletics: "I beg to observe, that, in his first examination, Rankovics stated that I, and not the Prince of Montenegro, was the head of the Omladina."

Rankovics: "Bosh! Jovanovics said that Miletics was the head of the Hungarian Omladina; but that the Prince of Montenegro was the head of the whole band."

Jovanovics: "The Omladina was but one society, and did not have two presidents. Also, I must say that I was shut up with Rankovics in the same cell for six weeks; and one day, whilst looking at the almanac over his bed, he said to me, 'I'll just tell you something in confidence. I never saw Miletics in Belgrade at all. Why doesn't he get up a revolution amongst the Serbs? Hang him!'—(Turning to Rankovics)—Confess, did you not say that?"

Rankovics (laughing): "Yes, I did."

Jovanovics: "You also said, 'What a pity it is that General Stratimirovitch is arrested. He could easily recruit 30,000 to 40,000 volunteers here. Poor devil! to be

shut up just now.'—Did you not say that?"

Rankovics: "Yes, I said all that."

Jovanovics: "You also said, 'Now I cannot do anything but betray the whole band, or go into prison.'"

Rankovics: "Yes, I said that, too."

This *nonchalant* attitude of Mr. Rankovics put Mr Jovanovics into such a state of excitement, that he could not proceed for a few minutes, and then accused Rankovics of being bribed by the authorities to give false evidence; stating, amongst other things, that he always had plenty of money, and smoked nothing but "the best cigars and the finest 'Sultan Flor,' which he wasted in a most wicked manner."

In reply to this, Mr. Rankovics declared, "that it was well known that he always smoked the best tobacco; and, if he had no money, he would rather smoke none at all than poison himself with cabbage-stalks: finally, that he had managed to scrape together a sum of 867 florins in Belgrade; and that that was all the good he ever got out of that pigstye of a town."

And this was all that Mr. Jovanovics could get out of Mr. Rankovics.

The next witness brought to confront Jovanovics was Pope Peter Pericz, an Orthodox priest in Bassahid. He stated that he had known Jovanovics since his youth, and had met him in June, 1876, when Jovanovics had asked him what chance there was of getting the people in his district to take up the Servian loan. He replied that the harvest had been so bad, that there was no chance of their doing so to any amount. In reply to the question whether Jovanovics had told him anything about the interview of Miletics with Prince Milan, he said 'No;' and that he knew all about it before he saw Jovanovics, as he was in the habit of reading the newspapers. Hereupon Pope Peter Pericz was confronted with a man named Lujanovics, which gave rise to the following delectable episode:—

Judge: "What did his reverence tell you about Jovanovics?"

Lujanovics: "I called him out into the passage, and asked him, in confidence, whether Jovanovics had not been talking of other matters besides the Servian loan. He then said that in case war should break out between Servia and the Porte, a revolution might break out amongst the Hungarian Serbs."

Judge: "Now, Mr. Priest, what have you to say to that?"

Pericz: "I can state upon my oath that no such conversation took place."

Judge (to Lujanovics): "Say it to his face. Repeat your statement to his face."

Lujanovics (turning to the priest): "If you deny that, your reverence, you are a liar!"

Pericz: "You're another!"

This passage of epithets led to some judicial remonstrances, with no further result than that both witnesses adhered to their assertions.

The next witness was a Serb, the mayor of Gross Kikinda. He deposed that he had been invited to supper at M. Majinski's, a solicitor of Gross Kikinda, at which he met Jovanovics, who said that Prince Milan had been told by Miletics that 30,000 to 40,000 Serbs in Hungary were ready to join him against Turkey. But at the same time he did not understand Jovanovics to say that Miletics had told him so; he only related it as a piece of news. Altogether, the supper at Herr Majinski's appears to have been a rather jovial affair. At another supper, one of the "seditious speeches" was made by a certain Markovicz. His niece had just been presented by her father with a fine horse, and Markovicz called upon her to promise this horse to the first Servian warrior who should take a Turkish battery. Mademoiselle Markovicz, however, replied that she did not mean to give her horse away to anybody—not even to a Servian warrior.

This exhausted the Jovanovics portion of the inquiry. It resulted, from this inquiry, that Mr. Jovanovics decided to make a tour to "collect" subscriptions for the relief of the wounded and refugees; that at the same time he took advantage of the opportunity to push the sale of a book, written by him, on the art of book-keeping; that he appropriated a portion of the subscriptions to pay his expenses; that he endeavoured to place shares of the Servian loan in Hungary; and that he had, somehow or other, obtained a card from Dr. Miletics.

The next witness was an old friend, Veslin. He was a counter-jumper in the establishment of John Polit, hosier and linendraper, and being thus as it were to the manner born, had had a number of buttons, studs, and medals struck, this time with the portrait of Dr. Svetovar Miletics, and the motto, "Czernagora, Bosnia, Herzegovina, Servia, Croatia, Slavonia, Bácska." The sale of these medals and buttons, said the witness, he had regarded as a matter of speculation. It was, he declared, just the same thing as the sale of gingerbread cakes with a portrait of Kossuth, at the time when the Hungarians rebelled against Austria, and were put down by the Serbs and Russians. There was no secret at all about the matter. His own initials, J. P. V., were on the medals; and far from Dr. Miletics, whom he had never spoken to, approving of his speculation, he was very indignant at it, and sent him back one of these medals made of gold, which he had sent for his acceptance. He only wanted to make money by the transaction. It was a common "dodge," he said, and numbers of similar medals and counters were about, with effigies of Serbs, Hungarians, Austrians, and Italians of note. Finally, he declared, and his evidence was borne out by the testimony of the director of the museum, that these medals had been struck years ago, and had circulated without any opposition on the part of the authorities.

This closed the evidence for the prosecution. The prosecutor, Dr. Böck, summed it up in a long speech, and considering that he had fully proved the guilt of the prisoner, demanded the full penalty accorded by the law—death, or imprisonment for life.

He was followed by Dr. Polit, who tore the arguments of the prosecutor to shreds, in a magnificent speech of several hours' duration. At the conclusion, Dr. Miletics rose. This concluding incident in the comedy is thus related by the *Pester Lloyd*, a Hungarian journal, the reputed organ of Count Andrassy, and which, therefore, cannot be suspected of partiality towards the prisoner.

"I am glad," he said, "that the light of publicity has been cast upon my conduct. The prosecutor states that I have followed the paths of high treason for years. Since when? I will not boast of what Francis Déak said to me in 1860, when I was introduced to him: '*Vérmes szerb, de jo hazafi*,'—a sanguine Serb, but a good patriot—but it is due to all whom I have the honour of knowing, and who have honoured me with their friendship, that it should be known what Déak himself said of me. The prosecutor seems to have forgotten everything that happened between the years 1860 and 1868.

"They were years of trial and tribulation. We all know how necessary it then was for all nationalities to hold together and combine to obtain constitutional rights. Although not decisive—for with all the political and material superiority of the Hungarians, they were unable to secure their constitution without foreign assistance—the help at that time of the Hungarian Serbs was certainly not unimportant. Then we Serbs, in spite of the reminiscences of 1848, joined in the demand for a constitution for Hungary: then I was a *jo hazafi*, a good patriot; but now, eight years later, because I wish that we Slavs should also constitutionally battle for our constitutional rights, I am called *hazaáruló* and *felségsérto*,* traitor and betrayer, and placed in the dock as a criminal."

At these words Miletics was overcome by emotion, and his eyes filled with tears. He then entered into a learned discussion with the prosecutor on intricate points of law, and showed a most wonderful mastery of the laws brought to bear against him. It was truly a strange sight to see this old man, his emaciated features flushed with excitement, and strongly contrasting with his grey beard and long snow-white hair, as he sat before a little table and turned over the pages of the great folios his counsel handed to him, criticising the Latin text word by word, and refuting the argument of the prosecution. The whole scene savoured rather of a legal discussion in ancient times by learned scholars, than of a trial in a modern court of law—even of a trial for high treason.

But it was all of no avail. The next day, after a six days' trial, Svetovar Miletics was found guilty of high treason on the above evidence, and sentenced to five years' imprisonment.

Comment on this trial is superfluous. No case in the Turkish courts of law, corrupt as they may be, could exceed this in point of flagrant injustice and national hatred—contemptible, mean, despicable beyond expression. On the unsupported testimony of a notorious scoundrel, a violator, a forgerer, a pimp, the jackal of a drunken general who had married the cast-off mistress of an emperor, Miletics was condemned to imprisonment for five years in the cells of Buda citadel. After eighteen months' preparation, this was all the evidence the State could adduce against him! This was all they could prove against the

* *Lese Majesty.*

Omladina. On their own showing, the dreaded society consisted of a Jovanovics, who went about collecting funds, and trying to place shares of a Servian loan; who appropriated part of the proceeds—perhaps the greater part—and used a card of Miletics', which he had stolen from his brother, to give an air of importance to himself; and, finally, of a counter-jumper at a hosier's, who speculated in buttons, and made use of an honest man's trade to put money into a blackguard's pocket. After eighteen months, this was all the Austrian government, police, detectives, and spies could find out against a literary society whose policy was represented by the diplomatists as subversive of society, and a grave danger to the State.

At the same time, however, it would not be accurate to say that the Omladina was not a political body also. It was; but only in the same sense as the Reform Club, or any of the Liberal or Conservative associations in England, without one-tenth of their organisation. But as for the Omladina, as a body, having had any practical weight, or having exercised any material influence on the course of events, it is perfectly absurd to say so. That individuals were found like John Polit, Jovanovics, Rankovics, and Veslin, to embark in speculative adventures under the cloak of patriotism, was natural, and would have been the case without any Omladina at all; but under no circumstances could the organisation of the Omladina, or its active help to the insurgents, be compared, in the remotest degree, with the activity of the Carlist sympathisers and adventurers on the French frontier. Personal experience, in fact, and the perusal of documents written in 1875 by Polit and Miletics, now lying on the table whilst these lines are being penned, assess the influence of the Omladinists still lower even than appears from official documents and the great trial of the chief of the "society" himself. Throughout, 90 per cent. of those who took an active part in the agitation were animated by the most sordid motives; they were the black sheep of a country where the species is peculiarly abundant; and scarcely one of them was there who might not have been arrested for half-a-dozen misdemeanours. Yet, in spite of all these notorious facts, we find Lord Loftus writing that, "in regard to Servia, Prince Gortschakoff stated that the interest of the Russians was to support Prince Milan against the 'Omladina' and the violent revolutionary party who were plotting his overthrow; and he had lately drawn the attention of the Austrian cabinet to the secret workings of this party, not only in Servia, but in the adjoining Austrian provinces, as also to the intrigues of Karageorgevitch and his followers. His highness had recommended that these revolutionary proceedings and elements should be carefully watched, and that they should be put down with a strong hand."

What Prince Gortschakoff really was doing was exciting Prince Milan's suspicions against Austria, and preparing the way for that influx of Russians which was soon to give quite a different complexion to affairs.

With this we may conclude the Omladina incident in the affairs of Servia. It is abundantly plain that Servia was in the hands of her ministers—*i.e.*, of Ristich; and that she hoped, by skilful manœuvring between Austria and Russia, to be able to secure enough for herself to counterbalance any acquisitions that might be made by Montenegro. The only real influence brought to bear upon her was that exercised by those two countries.

CHAPTER VII.

THE BERLIN MEMORANDUM.

In considering the part played by Montenegro in the local scramble, as it may be called, for the provinces of European Turkey, the manifesto of Prince Nikita, issued on May 8th, 1876, is worthy of the fullest attention. It is a remarkable document;

and with some exceptions, less in matters of fact than in matters of inference, it is also remarkably accurate, and worthy of being placed on record. It was sent to all the European governments, and contained one noteworthy warning which we have reason to know was due to Russian initiation, but which, if it had been properly appreciated and acted on by the powers, would have probably prevented the war which ensued.

He wrote:—"For years the province of Herzegovina has been the theatre of continual disorders, and the position of the Christian majority of the population has been rendered intolerable. The reforms and guarantees accorded, time after time, by the government of his majesty the Sultan, with a good faith which we are far from suspecting, have not attained their end, because, in this, as unfortunately in everything else, the authorities charged to apply them have set themselves to annul their effect, in which they have been actively aided by the Mahommedan minority.

"This minority, in concert with the civil and judicial magistrates, as well as with the military leaders, has never failed, after the publication with a great flourish of the decrees of the Porte, to make them a dead letter, even before their application had been attempted. The vexations and refusals of justice, in great as in small matters, continued as in the past, and the rayah had, no more than formerly, an hour of security for himself, his family, and his goods. Such a situation would exasperate the most gentle populations; much less, then, could unlimited patience be expected from a people strangers to all civilising influences, and whose masters themselves set the example of contempt of the laws. Life itself had become insupportable; when a people is reduced to this we know the result.

"A striking proof of the despair to which the Herzegovinians were reduced is the perfect brotherhood to which daily sufferings have led two hostile religions. To those who know the hatred which everywhere in the East divides the Roman Catholics and the Orthodox Greek Church, this fact speaks for itself. At this hour Catholic priests and Greek popes fight together, mixed up in the same ranks."

(This, as was pointed out in another place, was owing to the peculiar relations existing between Prince Nikita and Bishop Strossmayer, and other leaders of the Croat movement, and not so much from a community of interests or sympathies.)

"During the year 1874, the misery of the Christians having reached its height, there were, in various parts of the province, movements precursory to a rising, to which the authorities responded by doubling their rigour, and by the summary arrest of a certain number of notables. Others, escaping pursuit, took refuge in Montenegro, asking the prince to give them an asylum, and even to help them to shake off the yoke.

"Prince Nicholas, faithful to international laws, refused to listen to this last request; but, well knowing the state of things which had necessitated the flight of his guests, he did his utmost to make possible their return in safety to their homes. At the same time he made known to the powers, by a memorial dated April, 1875, the situation in which the neighbouring territories were placed.

"Then, as ever, when there was question of a good action, he had the good fortune to obtain the powerful assistance of the government of his majesty the Emperor of Austria, which was ready to make itself, at Constantinople, the medium for communicating his highness's wishes. Thanks to this support, the Porte granted an amnesty for the acts of agitation, and for the illegal departure of the notables. Besides this, she instituted a commission of officials, charged to receive and record the claims of the Herzegovinians. As soon as the emigrants had returned and the commission was installed, there happened, what always has happened in Turkey since the Sultans have undertaken reforms, the new decrees were left unexecuted like the preceding ones, and the delegates did nothing but commence, formally, the inquiry with which they were charged. The native Mussulmans, irritated, redoubled their acts of violence and molestation under the eyes of the commission, which was either powerless or their accomplice; and the Christians, at the end of their patience, listened only to the voice of despair.

"It was thus that the present insurrection broke out, without any preliminary arrangement or preparation.

"It is quite useless to relate the history of this war of detail, of surprises, of small engagements, which has only been signalised by the animosity of the two

parties, and by the vengeance exercised, without distinction, on entire districts, by the Turks.

"Since the commencement of this crisis, the Christian powers, anxious as they should be to circumscribe the incendiary focus, in order to prevent it from becoming by degrees a general conflagration, addressed themselves to the Prince of Montenegro, whose action might decide or arrest the gravest complications. Entering without hesitation into their views, and moved by the same sentiments of order and peace, the prince gave his promise to observe neutrality, and he is happy to be able to say that he has kept this engagement. He even wishes it to be remarked, by the way, that he has given a striking proof at the same time of his fidelity to his engagements, and of his power over his people, by preventing them from throwing themselves blindly into the struggle, as they would have done formerly. This fact shows, as it is not useless to observe, what progress the country has made in the path of order and respect for the laws during the last quarter of a century."

Then recapitulating the endeavours made by the powers to restore peace in the revolted provinces, and detailing the ferocious measures taken by the Turks to suppress the rebellion, the prince concludes with the passage to which reference has been made.

"In the general break-up," he said, "the Turkish nation, in spite of the admirable patience which characterises it, driven to despair, cannot fail to call upon its courage to inflict, to the utmost of its ability, a terrible vengeance upon its rivals, before accepting the ruin of its power.

"*The crisis which is impending, if the last moment for averting it be not seized upon, cannot be circumscribed; the whole peninsula of the Balkan will be enveloped in it. It is no business of ours to deal with what concerns Bosnia, Servia, and Bulgaria; but we cannot be blind to the evident connection of all that is going on in European Turkey.* The Mussulmans on their side will make no distinctions; all Christians, whatever their nationality or religion, are fatally included in the number of enemies to be destroyed. We know perfectly well, and the whole world ought to know with us, that, as the normal centre of independence, our little State is specially designed for implacable vengeance; also, no one will be surprised that, whilst preparing to the best of our ability to defend our existence, we should take, in spite of the humble position we occupy on the map, the initiative of an appeal to Europe.

"We do not pretend to point out what form of negotiations, congresses, conferences, or correspondence between the governments may be best suited to attain the desired object, and still less to bring forward questions which do not affect our country alone, or the provinces that surround it. But we earnestly intreat the powers not to lose sight of the fact that the Porte will not, cannot, and, indeed, from the Mussulman point of view, ought not to entertain serious projects of reform and justice towards its Christian subjects; that, had she such projects, she is powerless to execute them; that the supreme and inevitable crisis will burst forth of itself by the force of circumstances, in spite of diplomatic notes and fine promises of the divan.

"Europe alone, by acting in concert with promptitude and determination, can still, by interposing her will, prevent the horrors of a war of extermination."

Now, there appears to be scarcely any doubt that this manifesto of Prince Nikita's was dictated partly by his own convictions, and partly in consequence of Russian advice, in view of the conference about to be held at Berlin between Prince Bismarck, Count Andrassy, and Prince Gortschakoff, to concert fresh measures for forcing the Porte to grant substantial reforms. It is, in fact, impossible to resist this conviction, quite apart from any other information, when we compare the following passage in a despatch from Lord Loftus, relating to a conversation he had with Prince Gortschakoff on April 30, with the passage in the prince's circular which we have italicised.

"There can be no doubt," said his highness, "that, in case a pacification could not be accomplished, the insurrection would assume much larger proportions, and a flame would be kindled in Bulgaria, Epirus, Thessaly, and Albania, which the Porte, with its weakened resources, would be unable to extinguish; and the Christian powers of Europe, awakened by public opinion to the call of humanity, will have to interpose to arrest the effusion of blood."

Nor is this all. For when, in consequence of Mukhtar Pasha's report, that, when proceeding to the relief of Niksics, he found that the insurgents were largely composed of Montenegrins, the Porte seemed decided to attack Montenegro, but assured the powers that nothing beyond the assembling of some troops at Scutari, for defensive purposes, had been discussed at the council held at the Porte, and Lord Derby presumed that the joint action of the representatives at Constantinople was no longer called for, Prince Gortschakoff still considered that, in the eye of Europe, as well as of the Turks, the non-active participation of England in the remonstrances made by the five powers at Constantinople, against a reported intention of Turkey to invade Montenegro, might give rise to misinterpretation and misconstruction, and that a false impression might be deduced, from the apparent silence of England, that she separated herself from the European concert.

The prince, therefore, asked Lord Loftus to express his hopes that, in some form, her majesty's government would convey to the Porte their participation in the opinion of the five powers on the occasion in question, and their satisfaction on learning that the Porte had no intention of attacking Montenegro.

But, at the same time, Prince Gortschakoff observed that the Porte had not abandoned her intention of concentrating a force at Scutari, and he considered this measure as one of a dangerous nature; for, said his highness, "c'est une étincelle près d'une poudrière."

In conversing with Lord Loftus on the attitude of affairs in the Herzegovina, the prince expressed the opinion that the negotiations could not be carried on (as Count Andrassy apparently hoped) on the basis or within the scope of the proposals accepted by the Porte, and remarked that the Porte could not carry out the engagements she had taken; it was impossible for her to do so.

"But," observed Lord Loftus, "the European powers could not possibly say to the Porte, 'We have asked you to undertake an impossibility.'"

"That is true," replied the prince, "but at the time those proposals were made, we conceived that the Porte had more resources, more vitality; that she was not so powerless as she has since proved herself to be."

Now, regarding these utterances, whether by the light of subsequent events or not, there was nothing intrinsically objectionable to them in point of fact. They were consistent with the facts of the case, and ought to have furnished a sufficient basis for agreement, no matter whether Russia was animated by ulterior designs or not. The facts being undisputed, no harm could have been done in accepting them, and insisting on whatever remedy was to be proposed, as long as that remedy did not go beyond the exigencies of the case.

But the hesitation of the English cabinet to interfere in the military operations of the Porte, coupled with the outcry in England against the despatch of the fleet to Besika Bay, which took place a couple of days before the meeting of Prince Bismarck and Count Andrassy with Baron Jomini, produced an impression in Russia as well as in Turkey, that England, as heretofore, intended to assist Turkey, and thus make the Porte far more unyielding than would otherwise have been the case.

But, be it well noted, it was not the despatch of the fleet in itself that produced this stubbornness in the Porte. On the contrary, the Turkish ambassador at Vienna stated plainly, that "THE OUTCRY AND OPPOSITION IN ENGLAND, LEFT NO ROOM FOR DOUBT THAT THE GOVERNMENT INTENDED TO PROTECT TURKEY; FOR," he added, "THERE CAN BE NO QUESTION BUT THAT THE ATTITUDE OF THE OPPOSITION AFFORDS THE BEST CLUE TO THE REAL INTENTIONS OF THE GOVERNMENT. WHO IS TO SAY WHAT THE CABINET MEANS, IF NOT THE OPPOSITION, WHICH IS MOST NEARLY CONCERNED? YOU MAY SAY WHAT YOU PLEASE; MR. GLADSTONE KNOWS PERFECTLY WELL WHAT THE GOVERNMENT INTENDS TO DO, AND SIR HENRY ELLIOT MAY SAY WHAT HE PLEASES."

This was the view generally taken in Turkey, and, it may also be said, Russia likewise. That it was incorrect, is shown by the following series of telegrams. The answer they supply is irrefutable, except on the supposition, which is inadmissible, that Sir H. Elliot was instructed beforehand to act as he did. On May 9, he telegraphed:—

"Great uneasiness prevails here amongst all classes, and there are grounds for apprehending serious consequences. Nothing certain is known of the designs that may be entertained, but for some days the Mussulmans have been buying up arms. My colleagues believe that the presence of ships of war at Besika Bay might be a pro-

tection to the Christians here, and give them confidence. I entirely agree with them; and, as our squadron is now at Jaffa, I have telegraphed to Mr. Eldridge as follows:—'Inform Admiral Drummond that his early presence here might be useful, and that I would be glad if he would bring his squadron to Besika Bay.'"

The following day, Lord Derby, frightened out of equanimity by this telegram, replied by the following one:—

"Sir,—I have to request that you will explain to her majesty's government more fully your reasons for requiring the presence of the squadron at Besika Bay."

This query of Lord Derby's provoked a repetition of the first telegram, in so laconic a form as quite to preclude any idea of collusion.

"My Lord,—I have the honour to explain, in reply to your lordship's telegraphic despatch, which I received to-day, that I believe that the presence of the squadron at Besika Bay would greatly conduce to the security of the Christians here, who are considered to be in much danger at present."

This "explanation" was followed up the same day by another:—

"Every day the state of things here becomes more critical. My own impression is that the designs of the Mussulmans are directed more against the government than against the Christians; but still, in case of a disturbance, the latter might be placed in great danger by the spirit of fanaticism which prevails. It is doubtful whether the army could be depended upon to act against the Mussulmans. The presence of a second British vessel here is desirable, and I should add that all my colleagues have requested their respective governments to send an armed gun-boat in addition to the 'stationnaires.'"

This telegram left Constantinople at 9.50 P.M. At 10 P.M. the following one was sent off:—

"Reports received from Salonica are far from satisfactory. It would appear that the Turkish force there is insufficient, either to insure tranquillity at the public funeral of the consuls, or to permit of arrests being made. Both our consul, Mr. Blunt, and the commander of the *Bittern*, consider that the presence of two ironclads is much required, and they have telegraphed to the admiral to that effect."

Now, when it is considered that it was only the day before the first despatch arrived that Lord Derby had heard of the murders of the French and German consuls at Salonica, and yet that his lordship wanted "explanations" before ordering the fleet to Besika, it must either be acknowledged that the despatch of the fleet was not due to any preconcerted plan, or that Lord Derby must be credited with an amount of Machiavelianism which there seems to be no grounds for attributing to him.

The outcry against the despatch of the fleet, excusable as it might have been in an ignorant mob, was unpardonable in the case of men who had been in office, and not only knew the byeways and crooked paths of diplomacy, but also had the means of acquiring authentic information if so disposed.

It was under these circumstances that the Austrian and Russian ministers, Count Andrassy and Prince Gortschakoff, met at Prince Bismarck's on May 12, 1876, and drew up the famous document, subsequently known as the Berlin Memorandum. After alluding to the assassinations at Salonica, the memorandum went on to state that, in virtue of the Andrassy note of December 30, 1875, and its acceptance by the Porte, the powers had acquired a moral right—that of watching over the fulfilment of the reforms granted by the Porte; and an obligation—that of insisting that the insurgents should lay down their arms and return to their homes.

"Nevertheless," it continued, "this programme of pacification, though it has been adopted in principle by both parties, has encountered a twofold obstacle.

"The insurgents have declared that past experience forbids them to trust the promises of the Porte without a positive material European guarantee.

"The Porte, on its side, has declared that, as long as the insurgents were scouring the country in arms, and the refugees did not return to their homes, it was materially impossible for it to proceed to the new organisation of the country.

"In the meantime hostilities have resumed their course. The agitation engendered by this strife of eight months has extended to other parts of Turkey. The Mussulman populations have been thereby led to conclude that the Porte had only apparently deferred to the diplomatic action of Europe, and that at heart it did

not intend seriously to apply the promised reforms. Thence arose a revival of religious and political passions, which has contributed to cause the deplorable events at Salonica, and the menacing over-excitement which manifests itself at other points of European Turkey.

"Nor is it doubtful that, in its turn, this explosion of fanaticism reacts on men's minds in Bosnia and Herzegovina as in the neighbouring principalities.

"For the Christians in these countries must have been keenly impressed by the fact of the massacre of the European consuls in open day, in a peaceful town, under the eyes of powerless authorities: how, then, can they be induced to trust themselves to the good-will of Turks, irritated by a protracted and sanguinary struggle?

"Were this state of affairs to be prolonged, the risk would thus be incurred of seeing that general conflagration kindled which the mediation of the great powers was precisely intended to avert.

"It is most essential, therefore, to establish certain guarantees of a nature to insure, beyond doubt, the loyal and full application of the measures agreed upon between the powers and the Porte. It is more than ever urgent to press the government of the Sultan to decide on setting itself seriously to work to fulfil the engagements it has contracted towards Europe.

"As the first step in this direction, the three Imperial Courts propose to insist with the Porte, with all the energy that the united voice of the three powers should possess, on a suspension of arms being effected for the term of two months.

"This interval would enable action to be brought to bear simultaneously on the insurgents and the refugees, to inspire them with confidence in the vigilant solicitude of Europe; on the neighbouring principalities, to exhort them not to hinder this attempt at conciliation; and finally on the Ottoman government, to place it in a position to carry out its promises. By this means the way might be opened for direct negotiations between the Porte and the Bosnian and Herzegovinian delegates, on the basis of the wishes the latter have formulated, and which have been deemed fit to serve as starting-points for a discussion.

"These points are as follows:—

"1. That materials for the reconstruction of dwelling-houses and churches should be furnished to the returning refugees; that their subsistence should be assured to them till they could support themselves by their own labour.

"2. In so far as the distribution of help should appertain to the Turkish commissioner, he should consult as to the measures to be taken with the mixed commission, mentioned in the note of the 30th of December, to guarantee the *bonâ fide* application of the reforms, and control their execution. This commission should be presided over by a Herzegovinian Christian, and be composed of natives faithfully representing the two religions of the country. They should be elected as soon as the armistice should have suspended hostilities.

"3. In order to avoid any collision, advice should be given at Constantinople to concentrate the Turkish troops, at least until excitement has subsided, on some points to be agreed upon.

"4. Christians, as well as Mussulmans, should retain their arms.

"5. The consuls or delegates of the powers shall keep a watch over the application of the reforms in general, and on the steps relative to the repatriation in particular.

"If, with the friendly and cordial support of the great powers, and by the help of an armistice, an arrangement could be concluded on these bases, and be set in train immediately by the return of the refugees, and the election of the mixed commission, a considerable step would be made towards pacification.

"If, however, the armistice were to expire without the efforts of the powers being successful in attaining the end they have in view, the three Imperial Courts are of opinion that it would become necessary to supplement their diplomatic action by the sanction of an agreement with a view to such efficacious measures as might appear to be demanded in the interest of general peace, to check the evil, and prevent its development."

Now there were two items in this document which were clearly objectionable. The one was Article 3; the other Article 4. "Concentrating the Turkish troops" meant their withdrawal to certain specified points, and thus allowing Article 4 to produce its natural result of fresh outrages on both sides, without any authorities to repress them. On the contrary, it ought to have

been proposed that the troops—regular troops of whom no complaint is ever made—should be employed in keeping order, and both Mussulmans and Christians be disarmed to prevent any conflict. But these objections were not made by any of the powers except England and Turkey; whilst Lord Derby fastened chiefly upon the last sentence, and stated, in reply to Count Beust, that, in considering the question of an armistice, it was necessary to look at its effect in a military and political point of view. Unless the armistice suggested were accompanied by proposals that seemed to hold out a reasonable expectation of the re-establishment of peace, he doubted whether the Porte was likely to accept it, for three reasons.

In the first place, he said, an armed insurrection always gains strength by the mere fact of continuing to exist. The longer it lasts, the smaller is the chance of its being ultimately put down. In the next place, the cost of maintaining a Turkish army of not less than 50,000 men on the frontier could not but press heavily on an exhausted exchequer, while the insurgents, fighting among their own mountains, incurred but little expense, and it was impossible that the troops should not become more or less disorganised by being kept inactive in the face of an enemy. Thirdly, what real guarantee could be given for the maintenance of the armistice? On the Turkish side there was an organised government to deal with, and the generals of the Porte would not venture to break engagements into which they had been ordered to enter: but could the same thing be said of the insurgents? Had they recognised chiefs capable of enforcing obedience along the whole frontier? And if they had, could those chiefs be relied on? These were considerations which the government of the Sultan could not overlook.

Count Beust then pressed him to say that, if he gave no support to the proposal, he would at least abstain from opposing it.

To this Lord Derby answered, that he was quite aware of the responsibility that would be incurred by any government that should urge, or even encourage, the Porte to reject advice supported by so general an agreement of the continental powers. He should not press his view, nor would he say that the objections which he had suggested might not be got over; but, if asked, he could only state them for what they might be worth.

Some further conversation followed, in the course of which he told Count Beust that he had no plan to propose, but that it seemed to him idle to talk of putting an end to the war as long as the prince and people of Montenegro were allowed to give it active support and assistance, as they were then doing, being at the same time guarded by the intervention of the powers from all fear of retribution on the part of Turkey.

This action of the government is inexplicable, except on the hypothesis that they wished to precipitate events in Turkey, and see an end put to the Turkish rule without having any hand in it, in order to profit by the inevitable collapse, whilst carefully avoiding any grounds for suspicion on the part of their Mussulman subjects that they were in any way privy to the dismemberment of the Sultan's empire. It is, at any rate, certain that all the powers officially expressed their great regret that England refused her co-operation. Still it must not be forgotten that one word spoken often outweighs a dozen despatches, and there may be some other explanation to account for the hostility to the memorandum which the cabinet evinced.

In case, however, that the government were determined to proceed to extremities should Russia do the same, their policy was a wise one. By keeping themselves free from all entangling engagements, they put themselves into a position to interfere at the given moment with all the freshness and vigour of a strong and uncompromised power.

CHAPTER VIII.

THE TERROR IN BULGARIA.

WITH Bosnia, the Herzegovina and Montenegro in revolt—with Servia and Roumania on the point of declaring war, and teeming with insurrectionary committees, which sent their agents swarming over the country, it was not to be expected that Bulgaria would long remain unaffected by the course of events on her borders.

Comparatively unknown until recently, the early history of Bulgaria is that of a series of expeditions against Byzance, until the dissensions in the House of Comnenus enabled Asan I. to throw off the yoke of the Greek Emperor Isaac, and to establish his rule in the district known as the Silva Bulgaria, with the exception of a few strong places which were still held by the Greek emperor's troops. He was crowned in 1186 at Tirnova, which became henceforth the capital of the Bulgarian kings, and where, in 1205, Baldwin was barbarously murdered after the defeat of the Crusaders by the allied Greeks and Bulgarians. The rule of the Asanides was, however, of short duration; and in 1291 Bulgaria fell a prey partly to the contentions of its own rival princes between themselves, and to the intrigues and attacks of the Greek and Latin empires at Constantinople, till it fell more or less under the control of the Servian kings Urosh III. and Dushan. Over this chapter of Bulgaro-Servian history, from the death of Asan I. to the Mussulman conquest, the historians pass very rapidly. In fact, the little they tell us belongs rather to the history of the Greek empire than to that of Bulgaria. It is true that the authorities for this period are of doubtful historical value, and partake largely of the character of tradition and legendary lore; but in the absence of well-authenticated facts, traditions and legends exercise just as great an influence on later generations as the most accurate chronicle, and bring out the character of the people far more than any scientifically written history. It would certainly scarcely be fair to judge the present Bulgarian by what he was in the 13th and 14th centuries, if the country had been as open to surrounding influences as the nations of Western Europe were to each other during the same period, and since then. But it must be remembered that Bulgaria has been isolated for centuries; and events have but too clearly shown that the rude, fierce passions which animated the forefathers have been inherited in nearly all their force by the sons. It is, indeed, a dark chapter of history, a story of rival claimants, supported now by the Servians, now by the Byzantian emperors, and in which treachery and murder succeed each other almost without interruption, and clearly shows what the curse really is that weighs upon the populations of the Balkan peninsula, and what chances the Bulgarians have of being able to bury the past, and inaugurating a fresh history untrammelled by the bloody legacies of former ages. The evil destiny of the Bulgarians does not lie in an inferiority of race, in native barbarity, and inaccessibility to European culture, as their enemies say; nor yet in Islam and Turkish oppression. The evil is more deeply rooted in Bulgaria, as elsewhere throughout Turkey; it is Byzantianism. It arises from the contact of Western with Asiatic ideas, and the endless conflicts that result therefrom, not only as between race and race, but also in each individual in whose mind the rival ideas and passions are continually struggling for the supremacy. It lies in the struggle for the possession of the gates of Europe; for the possession of countries which are not sharply marked off by geographical nor by ethnographical limits, but where there is a mixture of races of various degrees of intelligence and energy, divided from each other by creed, language, and interminable jealousies and hatreds. The Bulgarians succeeded the Greeks; the Turks succeeded the Bulgarians; the Russians have been trying to oust the Turks, and to remove, at least, one element of discord from the blood-stained scene. The Russian sees plainly what other nations refuse to see—though he does not seem to know to which category he himself belongs—that the line of contact between Asiatic and European must be moved farther back, and a rigid division made between the two by concentrating the European elements into

a strong phalanx. *Habent sua fata enim regiones;* and the evil fate of the Balkan peninsula lies in the fact that Asia has always had one foot upon Europe from the days of Xerxes, through the various phases of Byzantian empire, to the days of Abdul Hamid. Asia, whether Russian or Turkish, must retire. It then becomes a question as to the division of responsibility for the protection of the gates, and as to *Quis custodiet custodes* if the keepers of the gates are not strong enough to withstand the onslaughts of their Asiatic enemies. It also becomes a question as to which race is more impregnated with Asiatic ideas, and which is more likely to be able to emancipate itself from the Byzantianism which has been the ruin of the peninsula. In short, whether the Greek or the Slav contains the more fruitful germs of honest political life—not the more mobile intellect—and whether a preponderance can be accorded to either; or, if not, what are to be the limits dividing the two races. In coming to more modern times, we must bear in mind the difference between Servia and Bulgaria, and how the Turks scattered their colonies throughout the country, and stifled all national feeling amongst the Bulgarians, who were left to themselves without protection; whilst Servia, regarded as the bulwark of Christianity against the Moslem, received the support of Austro-Hungary, and was thus enabled to retain its national pride, and develop the strongest patriotism amongst its sons. The Bulgarians, however, lay too much at the mercy of their conquerors; they have gradually degenerated into a hopeless state of resignation; and thus, in 1828-'29, it was only the mountain population that rendered any assistance to the Russians. Still, even this assistance, small though it was, caused much anxiety to the Porte, as well as the subsequent risings in 1837-'38 and 1841, and a beginning was made to introduce some few reforms, which were still further extended after the Crimean war. But meagre though these reforms were, the Bulgarians made such good use of them as to prove incontestably that centuries of Asiatic oppression had not converted them into Asiatics; and after the unsuccessful rising in 1862, the Porte was so thoroughly awakened to the importance of the movement progressing in Bulgaria, that Midhat Pasha was sent to pacify the province, and carry out such reforms as were imperatively necessary, as far as consistent with the safety of the Porte. But Midhat soon saw that the slightest reform would be a weapon against the Porte in the hands of the Bulgarians; and the way in which he put down the insurrection of 1867, which was instigated by Servia to exercise a pressure upon the Porte in the matter of the Servian fortresses, clearly shows that the public works he constructed in Bulgaria were but a poor set-off against the reign of terror he instituted. Fifty-four of the insurgents were sent in heavy irons to Rustzuk, where ten were executed, and the rest banished to Diarbekir, which, however, was reached by a few of them only, most of them dying by the way, or being hanged. Still even these "reforms" caused much displeasure in Constantinople, and Midhat was recalled, to the sorrow and yet to the joy of the Bulgarians. They fully appreciated his strict justice; but, at the same time, they plainly saw that he was only forging stronger fetters for them, and that he was the most dangerous enemy to their political regeneration and independence. With the departure of Midhat, the intrigue of the Servian and Panslavist agitators recommenced; but, with the exception of the revolt at Sophia in 1873, the country remained outwardly quiet. The movement, however, silently progressed, till Europe was struck with horror at the atrocities committed in Batak.

Many travellers in Bulgaria have conceived an idea that the Turks are better off and more civilised than the Bulgarians. The Turk does exhibit more taste in his surroundings than the Bulgarian. His house is more prettily situated and more picturesquely built than that of the Bulgarian. But the advantage is only outwardly in favour of the Turk. Inside the Bulgarian house there is much more neatness, order, and busy life than in the house of the Moslem. There is no family life in the Turk's house as there is in that of the Bulgarian; there is none of that mixing of the sexes which distinguishes the Bulgarian from the Turk, and, in many instances, from the Greek, whose ancient institutions were not so foreign to the idea of the Turkish harem. It is true the social life of the Bulgarian can as yet scarcely be called refined; but there is a marked difference between the tastes of the Bulgarian and the Serb as compared to those

of the Roumanian or Wallach. The latter tend more to the French, the former more to the Saxon modes of thought. But many and many a year will pass away before the Bulgarian will be able to hold his own amidst European nations, unless stringent measures are adopted to free him from the trammels which superstition, assisted by the monks, has imposed upon his mind. The name of the monks in Bulgaria is legion; they are infinitely more numerous and ignorant than in Servia; but what was done in Servia, by the help of elementary schools, could also be accomplished in Bulgaria. Perhaps more easily; for, on the whole, the Bulgarian is far more agriculturally inclined than the Servian, and is not so much attracted by the intriguing town life of his neighbours in Belgrade. On the whole, the Bulgarian is essentially material by nature, as is amply evidenced by the numerous superstitious observances and habits to which he is addicted; though, at the same time, it may be doubted whether these superstitions have more influence over him in his acts and daily life than similar customs in other countries. In short, it is a question whether the Bulgarian attaches more importance to his customs than we do to Guy Fawkes' Day, to the Christmas waits, or the pancakes on Shrove Tuesday. On the whole, it would seem that the Bulgarian observances are practised to give vent to the pent-up animal feelings of the people, who have no other outlet for their superabundant spirits. January 6 seems to be an especially exciting day for the majority, though it must be rather the reverse for the minority. The rites are commenced at dawn of day, by the mothers suddenly rubbing their children all over with snowballs; whilst the adults throughout the village lie in ambush, to souse each other with buckets of cold water. The young men who have been married during the year, are led in procession to the river or well, and are there similarly treated; whilst the wife is led by her step-father to the water, and obliged to get into it, and kiss his hand thrice. Having thus satisfactorily soused each other, they take their revenge on January 8, by disguising themselves in fantastic costumes, and, seizing the first best old woman they come across, either plunge her into the river, or souse her also with divers buckets of water. Lent is ushered in with a variety of ceremonies, such as a universal cleaning of pots and pans; but, strangely enough, the dead are exempted from observing the fast; for, on the second Sunday in Lent, food and drink are placed upon the graves of the deceased, and a procession formed by the women, who go from house to house with lighted tapers in their hands, to give their departed relations a good appetite. Altogether, the twenty-two weeks of Lent, the other thirty Fridays, and even the Wednesdays on which the peasantry also fast, represent an amount of corporal castigation unknown in any other country.

It is no wonder, then, that the Bulgarian tries to make up for his enforced digestive idleness during these days by a considerable indulgence on the others. The ceremonies and observances, however, which must be practised by those of both sexes who aspire to matrimony are peculiarly trying, and shows, in a striking manner, what human nature is prepared to go through in order to get married. The preliminaries are most complicated, and when at last the two are safely married, they silently quit the festive board, accompanied by the midwife of the village, who waits outside the nuptial chamber till she is able to return to the assembled guests and announce that the bride has given undoubted proof of her honour. The happy couple remain invisible in their house for several days, after which the bride's first walk is to the well, where she is soused with water by the married women, into whose ranks she is then worthy to enter. Should she not rejoice the soul of her husband with a son and heir, or at least a daughter, she has to be exorcised, and submit to endless incantation; and, if that is all of no avail, she sallies forth on the 1st of May, at early dawn, and rolls herself naked in the dewy grass. If these are some of the difficulties in getting married—and they are only some of them—it may be imagined what are the difficulties in getting born and dying in Bulgaria. When the father of the family feels his end approaching, he sends for the priest and begins to bargain with him about his funeral, and settles the details of his "wake." Having arranged all this and his other worldly affairs, he feels comfortably prepared to leave the world, and, when his agony commences, to have a lighted taper placed in his hand, his jaws bound up with a cloth, and his eyelids closed. The moment his pulse has stopped, all the

pots, pans, jars, kettles, &c., in the house are turned upside down to prevent his soul from taking refuge in one of them, and great care taken to prevent either man or animal —especially a cat or dog—from stepping across his body, as otherwise he would turn into a vampyre, and be a continual nuisance and a danger to his family and the whole community. A few hours after death the body is buried without any coffin, in a shallow grave, eighteen to twenty-four inches deep, and left there for three years, during which time many offerings of food and wine are placed upon it. At the end of the third year, the bones of the dead man are dug up, carefully washed, put into a linen bag, laid before the episcopal throne, of which there is one in every village, blessed by the pope, and then finally buried for good. Thus the Bulgarian is well taken care of after his death, unless, indeed, there is any reason to believe that he has become a vampyre. In that case the grave is opened and the body transfixed by a stake, or a nail is driven into his breast. If the body is very well preserved, then it is riddled with pistol-shots, and the earth stamped down firmly upon it, or sometimes it is burnt to ashes by a fire made of thorn.

These customs, and a hundred others, are naturally fostered by the ignorant monkhood as a source of revenue, which they share with the old women who play the part of doctors and exorcisers. But it must not be imagined for a moment that the Bulgarian allows these superstitions to interfere with his daily work, or that they lead him to indulge in laziness, as would be, and is, the case in southern climes. On the contrary, when it is remembered what a drain upon his resources the claims of the priesthood, the monkhood, and the Turks exercise, it is wonderful that he has so much left for himself as he has, and that he is able to live in comparative affluence. Nothing short of the most unflagging labour would enable him to do so; and that he does work with extreme energy and perseverance we have the word of such men as Kanitz, one of the contractors for various works along the Danube.

Now with these people the Turks were incapable of amalgamating like, for instance, the Normans with the Saxons, on account of the great barrier interposed by the fundamental differences of the faiths of Moslem and Christian. So great is this difference in its political aspect, that those Bulgarians, as in Bosnia, who became Mussulmans, grew more fanatical than the original Moslem. An immense gulf thus separated the ruler from the ruled, and, in a similar way, the Stamboul Court from those of Western Europe. This gulf was bridged over by the descendants of the Byzantians, and they—Greeks, Armenians, and Jews—rapidly acquired that power, and instituted that organisation of corruption, and all the vices that is known as the Sublime Porte. The strength of the Turk thus lies in the fact that he is sitting between two stools—between Slav and Greek. Both parties contended for his favour, and strove to acquire the ascendancy over him. In the struggle that ensued, Byzantianism gained the day over Slavism, and identified itself with the military caste in order to keep a firm hold on the whole country. Clearly, then, if peace is to be restored to the Balkan peninsula, the question must be resolved into its true elements, and the fact be boldly faced, that the two great factors opposing each other are Byzantianism and Slavism. The rest is but incidental. The Turk at Stamboul, and the Greek at Athens, are but corollaries. Abolishing the Turk, and replacing him by the Athenian, would leave matters exactly where they are now, if Byzantianism were not abolished with him. The great difficulty in solving this question is, where to find the necessary administrative powers outside the ranks of Byzantianism, and to draw the limits separating Greek from Slav; and how to deal with Constantinople.

Herr Kanitz, speaking, in his work "Bulgaria," on the connection between Bulgaria and Byzantianism, or the Fanar, has but one opinion on the subject. He insists on the independence of Bulgaria, in the widest sense of the word, as the first step to a happier state of things. He gives a short but graphic description of the events which, after alternating successes, at last laid the Bulgarians prostrate under the Emperor Basilius Bulgaroctonus—"The Slayer of the Bulgarians." Henceforth, till the Mussulman invasion, and with the exception of the short rule of the Latin empire at Constantinople, the Bulgarians were politically and ecclesiastically subject to the Greeks of the empire. And when the Ottoman forces overran the country, after a short inglorious struggle, which has been invested by poets and romancists with a certain nimbus, the Byzantians espoused

the cause of the invader, and retained the power they possessed over the Bulgarians, who now had, in reality, two masters to support—the Sultan in all his luxury, and the Fanar in all its greed. This is what Herr Kanitz says of the Fanar:—"The ecclesiastical traffickers who haggled and bargained for the episcopal posts in Bulgaria, proceeded from the 'Fanar' (fenayer), the Greek quarter of Constantinople, in which the rotten remains of Byzantian corruption blended with Turkish and Asiatic elements. The bishoprics of Bulgaria were awarded to the highest bidder, and not according to the intelligence, piety, or personal qualities requisite in an ecclesiastical ruler." Such was the community at whose mercy the Bulgarians lay, not only ecclesiastically but also fiscally, and who, after satisfying their own greed, screwed down the unhappy peasantry to the last turn to meet the demands of the Porte. But, as Herr Kanitz continues, "even the greatest wealth has its limits. Such was also the experience of the descendants of the Prophet; for the luxury of the Sultans and the Pashas soon swallowed up the tribute and the accumulated riches of the country. In such frequent moments of financial exhaustion the Sultans sought help from that quarter of Constantinople, in whose filth the loathsome remains of Byzance's former pride had found a refuge. In the Fanar they were always able to count, not only upon the rich treasures of commerce, but also upon the enormous wealth sucked by the Greek patriarchs out of the marrow of their flocks; in the Fanar the most usurious traffic in ecclesiastical benefices was established, and the treasurers of the Porte can scarcely be blamed if, in their moments of necessity, they derived a profit out of the depravity of the Fanariote beneficemonger. In the first year of the Mussulman conquest, the price paid for the patriarchate, by Simeon, was 1,000 ducats. In the second year it was doubled; and in 1573 it had risen to 6,000; and by 1864 to 25,000." But an equal sum almost had to be paid away in bribery, in order to get this bid accepted, so many were the applications even at such a price, which restricted the competition to a few of the richest Fanariote families, who regarded the matter simply as a business affair, and a speculation, to carry out which the necessary sums were borrowed from members of the family and money-lenders at usurious interest. The profit had been derived from the sale of the bishoprics, which brought in, on an average, about 4,000 ducats a-year. The bishops, on their part, sold the various cures in their dioceses to the popes, some of the richest of whom would sometimes buy twenty or thirty, and resell them again at a profit. These popes, without education, ground down by the price they had to pay for their cures, were capable of performing nothing more than the barest ceremonies of the church. Marriages, christenings, and deaths were freqnently registered on a stick with the time-honoured notches, instead of in a book. The rest of their time was fully occupied in following the plough and feeding their pigs. All this led to a state of affairs which even the Turkish authorities considered too disgraceful to last, and they insisted that the Christian as well as the Mussulman communities must pay more attention to education, and erect the necessary schools. A beginning was made, but all progress was prevented by the Fanar. "What do you want with schools?" asked the Archbishop of Nisch; "do you want your children to become unbelieving heretics? Better by far devote the money to the building of churches. Great roomy temples to the honour of God are the best schools." Thus, instead of schools, great rambling churches were built, and the prices of the sinecures proportionately raised. Herr Kanitz relates how the new church at Nisch swallowed up all the funds of the community, and that when the new archbishop from the Fanar opened the church, it was found that he could not speak a word of Bulgarian; and when he received the notables of the congregation, he reprimanded them in Greek and Turkish for the address they intended sending to the grand vizier. "Not with complaints," he said, "but with thanksgivings for the unmerited benefits of Turkish rule, the rayah ought to approach the representative of the Sultan." This astounding piece of advice was heard by Herr Kanitz himself, and is in itself sufficient to characterise the system under which Bulgaria suffered for so long, till, owing in a great measure to the exertions of Hilarion, Paisija, and Asentije, Bulgaria was freed from the yoke of the Fanariote vampyre, and a commencement made to inaugurate a fresh epoch of struggling for independence and national life.

It was on such fruitful soil as this that

the seeds of rebellion were sown broadcast by Russian, Serb, and Montenegrin agents. Under these circumstances the irritation of the Turkish populations reached a pitch at which little was required to place the Christians in many parts of the empire in a position of the greatest jeopardy, whilst the unpopularity of the Sultan and of Mahmoud Pasha, coupled with the universal distress arising from the financial state of the country, gave rise to deep-seated and general discontent throughout the country.

The effect of the long-continued insurrection in Bosnia was felt by every class of the community, whether Christian or Mussulman; but the latter regarded themselves as sufferers from a Christian movement for supremacy countenanced by the Christian powers, which allowed every kind of assistance to be given to the insurgents, while the Porte was prevented from adopting the measures considered necessary to put it down by attacking it at its source. At the same time, the Salonica castastrophe increased the prevailing uneasiness; and throughout the country the tension was so great, that the least spark was sufficient to explode the pent-up panic of the Moslems and cause a massacre. An Englishman, employed by the Turks in one of the inland Bulgarian towns, stated that the fright was so great that the Christians were forbidden to walk in the streets, two or more together, under pain of imprisonment; and that before this edict was promulgated, a solitary Turk seeing three Bulgarians advancing towards him down the street, and none of his co-religionists near, without more ado shot one of them dead, and seriously wounded another. The third managed to escape. Now the curious part of this business is that the Turk in question was highly esteemed by the Bulgarian population of the place, so that our informant felt no hesitation in asking him why he had attacked the unfortunate men. The reply exactly represents the state of mind the Turks were in. "My God Almighty," he said, "I don't know. But when I saw them coming towards me, and there was no other in the street, a great lump stuck in my throat and stopped my breath, and I pulled out my pistol and fired at them in a frenzy. God is very great!" And such was the feeling throughout the land. Both parties, it may be said, were bursting with that sort of apprehension or fear that is as powerful as the most determined courage. Those who lived through the Indian mutiny will well be able to realise the feeling, ultimately resulting in the grim ferocity of despair. It was put in another shape by a Bulgarian correspondent—a timber merchant—who is well known in one of the continental towns. He wrote:—"We do not fear the Bashi-Bazouks and Circassians so much. They are a rough, brutal set, but on the whole they can be managed by humouring them and treating them well. They are, of course, a great plague; but the Moslem landowners dislike them just as much as we do, and would be glad to get rid of them, for a Tcherkess does not stop to ask if the turkey-cock he steals is a Christian or a Turk. But what we are afraid of more than anything else is the fear the Moslems have of our rising *en masse*, and massacring them all at some given signal. They are convinced that such is our intention, and never know when the sun rises whether they will see it set. The suspense is killing us both (*la crainte nous assomme tous les deux*)."

This accurately describes the condition of affairs in Bulgaria towards the end of April, 1876, when isolated cases of revolt convinced the Moslems that the moment for their massacre had arrived, and caused an excitement all through the country, that spread from day to day.

These revolts were treated as in 1867, when there was a strange invasion of Bulgaria that created immense local excitement, and no small alarm at Constantinople. A countless Russian host, not of soldiers, but of *rats*, generally supposed to have migrated from the Ural, swept over the province up to the Balkan. Day by day their movements were reported by telegraph to Constantinople, whence the most stringent orders were sent to the Vali of Rustchuk to exterminate the vermin forthwith. The Vali at once published a decree, *ad hoc*, calling upon the people to carry out this order, which, however, remained as usual a dead letter. Fresh and peremptory commands were again despatched from Stamboul; whereupon the Vali armed himself with a stick, armed his generals, Muftis, Mollahs, and Cadis with sticks, and, sallying forth from village to village, summoned the people to arm themselves likewise with sticks, and then proceed, *viribus unitis*, to prod the vermin out of their holes. Such an impulse did this example impart to the energy of the people, that within a few

days the luckless invaders were all irretrievably massacred.

This is no parable, but a sober fact, and exactly illustrates not only the method by which the Bulgarian revolt was stifled, but also that by which the Turkish forces were mobilised. The rank and file formed excellent material, and some of the superior officers were very good; but of the inferior officers and the administration at Stamboul it is hard to say which was the worst. The War-Office sent its orders to the Valis of the Asiatic and European provinces to collect as many men as they could, no matter from what source, and to unfurl the green flag. An immense multitude of rabble was thus assembled at various points in the empire. The scum of the towns, the dregs of the prisons (even those of Egypt, Tripoli, and Tunis were impressed), the poorer peasantry—in short, all who had nothing to lose and everything to gain, were distributed amongst the towns and through the districts denuded of regular troops. Here they were the terror of the population, and about as much under the control of the Valis and Mutesarifs as a wild elephant in the hands of a child.

Under such conditions it is not surprising, as Consul Dupuis states, that disturbances occurred at Karabounar, between Yamboli and Eski-sagra; at Kouleli Bourgas, and at Tatar-Bazardjik, where a complete panic seized the place, and the fears of a general massacre were so great that the whole of the Christian population betook themselves to their churches, where they passed the night, while the Turks were parading the streets fully armed. At Tatar-Bazardjik, an eye-witness, a Polish gentleman in the service of the Porte, said that, on reaching that place, he found it completely abandoned, all the shops and houses shut up, the inhabitants fled or hid away, and complete disorganisation among the railway servants, in consequence of the reprisals threatened for the massacre at Otloukeui of five zaptiehs and an *employé* of the konak by insurgents; for the local authorities, fearing an attack on Tatar-Bazardjik, collected together an armed force of the Mussulman inhabitants, and started in pursuit of the murderers, who immediately fled to the mountains.

But though the murderers had fled, the troops which had been gathered together in the manner already described—Circassians, Bashi-Bazouks, and general riffraff—were not to be balked of their revenge on the inhabitants of the village of Otloukeui, who, refusing to surrender, and taking refuge in a church or monastery, were bombarded by them under Hafous Pasha, and upwards of 300 men, women, and children slaughtered.

This was the signal for that series of massacres by Moslems and Christians of each other (in which it is true that the Christians were worsted), which created such intense excitement in England, where it was at once seized upon for a party cry, and gave rise to that agitation which has become so notorious as to need no further allusion to it.

But, for future guidance, it may be well to show on what the wholesale denunciation of the Turks was based, and who were the immediate perpetrators of the sickening outrages which thrilled all Europe.

We will take the reports of the journal which was so fortunate as to find a way, not only for purely political purposes, but to regain the 'vantage ground it had lost as the organ of dissent. Here we find Mr. MacGahan writing:—

"When the insurrection broke out, regular soldiers were at first sent to put it down. Turkish soldiers are always a rough, undisciplined lot; but they had to deal with men who were not very much better, and who were in rebellion. Leaving out of consideration the provocation and justification which the insurgents had for rebellion, the systematic oppression of years, the numerous cases of individual cruelties and hardships, the long imprisonment in the foul dungeons, which, out of the capital, serve as prisons of men unconvicted and untried, but suspected—it may be admitted that in any country a rebel takes his life in his hands, and has no great reason to complain if, when he fails, he has to pay the penalty of death. Mercy towards belligerents was never expected, and has certainly never been shown in Turkish warfare. But the atrocities complained of are *not* the work of soldiers, but of *Bashi-Bazouks*. It will be remembered that, in the Crimean war, the reputation of more than one Indian officer was destroyed, because it was found impossible by men even with Indian experience to keep order among these irregular troops. Military organisation or discipline they can scarcely be said to have. Composed of the dregs of the Turkish and *Circassian* population, with *Gipsies* and

gaol-birds let out for the purpose, and under no responsible command, they have been let loose upon a large portion of central Bulgaria to put down the insurrection in their own fashion. The result is what everybody acquainted with the materials composing such a force might expect—the plundering of all moveable property, the burning of the houses and villages of the peasantry, without the slightest regard to the question whether the occupants have taken part in the insurrection or not, and the almost indiscriminate slaughter of old men, women, and children."

In another report we read the following graphic description. Novo Selo, however, it must be remembered, is the name of every third village in the country, so that it is rather a vague description:—

"The village of Novo Selo was attacked by *Bashi-Bazouks* and *Circassians*. More than 400 women and children took to flight, and, worn out with fatigue, huddled themselves together in the open fields near Kalofer. They sent to the head men of the latter village for food. After some negotiations to obtain the permission of the neighbouring Mussulmans, they received permission to take refuge in the convent of the Holy Trinity. During the negotiations a band of 200 men burst in upon the poor wretches, took from them everything of value which the *Circassian* troops had left them, and carried off forty of the young women. These men, returning to their village with their captives, were met by the Turkish women, who objected to receive any giaours. They were thereupon driven to a neighbouring farm, and, after a scene which the *Courrier* describes, but an English paper dare not, they were shut up in a straw-loft and burnt. Other particulars are given by the *Courrier;* but these are enough. This horrible statement, I repeat, was not contradicted here by the government, nor was the newspaper suppressed professedly because of its publication. Had it been, and the accuracy of the statements challenged, the truth would have been made manifest."

This reasoning is classic. Because the paper was not suppressed by a government which habitually suppressed the truth, therefore the charge was true.

Again, a letter from Sliven, May 29th, states:—

"In the market the soldiers attacked Detcho, the tailor, while the Redifs fired upon him and killed him. The same band of soldiers killed, with their daggers, a boy sixteen years old, and mortally wounded Thodoraki Ahmakoff. Four men are lying in bed badly wounded; but those who are slightly wounded are without number. The *governor, in this case, showed a great deal of prudence and energy.* The moment he was informed of these troubles he hastened to the place, ordered that the corpses of the two killed should be taken away, pacified the people, accompanied himself some of the wealthier people to their houses, while others he sent accompanied by his men, and commanded the *Bashi-Bazouks* to lay down their arms. In spite of all these orders, however, the *Bashi-Bazouks* did not lay down their arms, and continued to walk about armed, so that the people, fearing lest their property should be sacked, did not open their shops. The governor, observing this, ordered, on the 13th (25th), the public criers to announce to the people to open their shops; but they opened only one door of their shops, being still afraid of the lawlessness of the *Bashi-Bazouks.* A short time after, the *Bashi-Bazouks* and the troops attacked the butchers' and bakers' shops, plundering all the meat, bread, and money they found, so that the shops were again closed. The governor again ordered the *Bashi-Bazouks* to lay down their arms, and the Turkish Muhtars and Imams to tell the Turks to attend to their business. Moreover, he appointed guards of soldiers to go round the city; and by these precautions tranquillity was established again. In the villages, however, the *Bashi-Bazouks* go about freely with their arms, and commit various outrages, so that no one dares to go out of the city."

In the same letter it is also stated—"Great numbers of Bulgarian children have been captured by the *Circassians,* and have been sold, or are now on sale as slaves. So large is the stock on hand, that I am informed, from a good source, that young girls may be bought for three or four liras each at Philippopolis. I have seen an official report from a consular agent in the district, who has apparently no sympathy whatever with the insurgents, in which the estimate of those killed—non-combatants, that is—is fixed at 12,000, including men, women, and children. He adds, that the country is full of armed marauders, who compel all the wealthy Christians to pay heavy penalties, under the threat of

being denounced as insurgents." It is worthy of note, that even at this early period it was acknowledged that some Christians, at least, were wealthy and able to pay heavy penalties.

Then we read again:—"Complete anarchy reigns throughout the towns and villages of this province (Philippopolis). The *governor seems to be the only one who has at heart the true interest of the government, and he is unable to restrain the fanaticism of the Turks.* The idea is current here among the Turks, either to annihilate or to materially weaken the Bulgarian element, so that they may rid themselves of every fear of European intervention. In the space of twenty days more than 100 villages have been burned in the province of Philippopolis and of Tatar-Bazardjik."

"Bashi-Bazouks, and Circassians and Gipsies:" such is the constant refrain. It was not the regular troops, nor even the Moslems as a class, who were guilty of the excesses; but only the scoundrels, for the most part, hounded into Turkey by Russia.

It was, of course, highly reprehensible to make use of these ruffians; but when a man thinks his neighbours are about to fall upon him, and massacre him and all his belongings, he does not inquire too nicely into the character of his instruments to defend himself. Besides this, the Moslems were better aware of the nature of the Bulgarian than were correspondents, whose only preparation for their task was the study of a cheap Turkish grammar, purchased at one of the second-hand bookstalls along the Seine during their journey down the Danube. What the Bulgarians would have done, had they not been forestalled, has been amply proved by subsequent events. That they had cause for fear is now but too plain. But it was well known even then what was preparing. It was known as far south as Salonica. Here we find Consul Blunt writing:—

"Some Servian emissaries, with about thirty insurgents, made an irruption into the mountainous district of Malish, burnt some Bulgarian houses, hoping thus to force the Bulgarians to rise, and massacred some Mahommedans; but they were dispersed, and I now hear that several of them have been apprehended.

"The governor-general of Salonica informs me that he continues to receive satisfactory accounts of the quiet disposition of the Bulgarian peasants in his province.

"I am also informed that the secret agents of the authorities have discovered traces of a 'Bulgarian Comité' in this town, under the direction of foreign influence, who employed emissaries to foment disturbances in the interior."

It was equally known in Rustchuk; and Consul Reade lost no opportunities of impressing the fact upon his superiors, but with little effect. He wrote on May 20th:—

"The state of things here has improved since my last report, and the *emissaries* who have entered the vilayet from abroad find it daily more difficult to stir up the Bulgarians of the province.

"The insurgents from the Balkans having *failed in getting the Bulgarians of Selvi to join them, threatened to come down and punish them.* Accordingly, the day before yesterday, I believe about 1,000 were collected at Ducheva, a spot about two hours from Selvi. The Selvi people immediately sent off to Tirnova and Plevna for assistance, and Nedjib Aga, governor of the latter place, at once hurried off with about 500 men of the reserve.

"On their arrival where the insurgents were, they attacked them so vigorously that they completely routed them in a very short time. The killed and wounded were about 200. Nedjib Aga lost two killed and nine wounded.

"I saw the governor-general yesterday just as he had received this intelligence. His excellency was in high spirits, and hoped that the disturbances here would soon cease, as the insurgents must now be convinced that they cannot do anything of importance. Indeed, I have myself heard, from other quarters, that the Bulgarians themselves say, that not having taken advantage of the moment when the Turks were taken up with the Herzegovina, it is now too late to hope for any success here.

"The so-called *Bulgarian Committee* of Bucharest, as I said before, are moving, but, as the people here, I am told, say, too late. A number of them (from 100 to 120) are on the opposite coast, between this and Widdin, waiting for opportunities to cross; but the Turks are so much on the alert, night and day, that as yet none have been able to come over.

"In this town several have been arrested

for going about endeavouring to stir up the Bulgarians to rise; but they have not succeeded in one single instance. *The affair altogether is contemptible, and I think we shall shortly hear the end of it.*"

This may not appear to have been a very fortunate prophecy; but it must be remembered that Consul Reade was speaking of the country north of the Balkans, where, as a matter of fact, scarcely any excesses took place. At the same time, he writes on the following day:—

"Many of the *revolutionary Bulgarians in Wallachia* are said to be entering this vilayet, and some have already been discovered and arrested.

"From all I see and hear, I am persuaded that there is nothing serious to fear for the moment, nor will there be if the government acts with promptitude on the occurrence of any disorder. The Porte, however, I think, would do well were it to grant the pasha more power, so as to enable him to make examples of some of the chiefs of the insurgents; for I am persuaded if this is not done the natives will think that the government is weak, and the disturbances, which at present are comparatively insignificant, are sure to increase; whereas, if a few examples were made of the chiefs, they would serve as salutary, and, I think, successful lessons to the rest."

It was thus clearly Mr. Reade's opinion that the disturbances were chiefly due to foreign agents; and in advising the adoption of severe measures, he had only these people in view, and not the Bulgarian population; for Mr. Reade is one of those men who refuse to see good in a Turk, as his subsequent despatches amply prove—especially the one that aroused Lord Beaconsfield's ire when he retorted upon Mr. Gladstone's "bag and baggage" with a contemptuous "coffee-house babble." Both phrases were equally unfortunate—the one because it conveyed a wrong impression, the other because it was true. The "babble" was a report from a Mussulman, who was sent by Mr. Reade to acquire information, and ran as follows:—

"This morning I went to a *café*, where a Mussulman was sitting, in company with several Mussulmans of Rustchuk. He was one of those sent against the insurgents, and this is what I heard him say:—

"When asked whether he could be called a Ghazi (champion of the Faith), he answered, 'I will not speak of what I have done; but when I tell you that even our schoolboys killed their five or six Bulgarians, what can you imagine that I did?'

"He praised the Circassians as having done great things, having as their motto, '*Giaur eulsun, vurunuz eulsun*' ('Let the Giaour die—strike him, let him perish').

"A Bimbashi (major) present asked him if they had taken rifles from those that were killed. He replied, that 'they had not even a hoe with them, much less rifles.'

"The Bimbashi then said that they must have killed innocent people. He replied, 'Yes, very few had arms.'

"Another present remarked that 5,000 or 6,000 must have perished innocently. He answered, 'If you had said 25,000 or 26,000 you would have been more correct.' He added, 'It is a great loss to the country, as most of them were tax-paying people.'

"He also said that at Plevna no Christian could go to his field or vineyard for fear of being robbed or maltreated; and that the people of Nicopoli and Shumla were preparing letters of thanks to their Kaïmacams for not having armed the Circassians in their districts."

Similar information poured in from all quarters, and it was all to the same effect. The burden of the song was ever that emissaries were forcing the people into revolt, and that Circassians and Bashi-Bazouks were employed against them. Yet, at this very period, General Ignatieff was the very man who pooh-poohed the movement, and stated that, according to his information, the disturbances arose simply from the turbulent behaviour of the Italian navvies on the railway-works, who were discontented because they had not received their pay. Naturally the wily general did not wish it to become known what dimensions the agitation and massacre were taking. All he cared was that the Bulgarian "question" should arise in addition to the Bosnian, Herzegovinian, and Montenegrin questions.

The summary measures, however, which the Moslems were obliged to adopt, would speedily have resulted in the suppression of the revolt. It had, in fact, been already quelled when, chiefly through Ignatieff's instrumentality, the massacres of Perustitza, Aorat, Alan, and Batak were made known to the world through Mr. MacGahan and Mr. Schuyler. He saw that the time had come for adding fresh fuel to the smouldering flame, and found the above gentlemen willing tools in his hands for the purpose

of creating an intense excitement throughout Europe; whilst, on the other hand, he proceeded to stir up the rebellion afresh: this time, by openly-avowed emissaries and foreigners—that is, by inciting the Serbs to declare war, and carry their arms, not into the districts for which alone they had hitherto expressed their sympathy—that is to say, into Bosnia and the Herzegovina, where the Christians had been battling for the last eighteen months, and were, undoubtedly, suffering—but into Bulgaria, where the most diabolical intrigues and devilish means had been adopted to force the people into rebellion.

A personal friend of Mr. Schuyler's was chosen to carry this plan out—a man who had enabled Mr. Schuyler to make his *début* as a sensation-reporter and atrocity-monger. This man was General Tchernaieff.

Tchernaieff was one of those restless spirits who are consumed by ambition and eaten up by vanity. He had commanded a Russian detachment in the first Central Asian expedition, under General Kauffmann, and had conquered Tashkend. This turned his brain. Henceforth he was known amongst his friends as the Mogul of Tashkend. General Kauffmann, however, did not attach the same importance to his subordinate, who thoroughly believed that to him, and him alone, the success of the whole expedition was due. This led to disputes between the two commanders; and General Kauffmann—who, some people say, is the Czar of Asiatic Russia, which includes the greater portion of the empire—succeeded in inducing the authorities at St. Petersburg to intimate to General Tchernaieff that it would be advisable for him to resign.

The whole affair is wrapped up in some mystery. Whether General Tchernaieff's dismissal was due to his having furnished Mr. Schuyler with the information regarding the atrocities committed by General Kauffmann and the Russian Bashi-Bazouks, or whether it was in consequence of his dismissal that he favoured Mr. Schuyler, is not quite clear. Certain it is that the publication of Mr. Schuyler's report on the Asian atrocities led to such strong representations on the part of the Russian government, that he was recalled from his post at the United States embassy, and ordered to Constantinople. Probably Mr. Schuyler suggested Constantinople himself, as likely, from information probably volunteered by General Tchernaieff, to prove a favourable spot for the preparation of a fresh atrocity report. Be this as it may, General Tchernaieff and Mr. Schuyler were fast friends in Russia; Tchernaieff was in disgrace in Court circles; Schuyler went to Constantinople, became an intimate acquaintance of General Ignatieff's; and shortly afterwards, almost simultaneously with the publication of the Bulgarian horrors, General Tchernaieff arrived in Belgrade.

This may all be a fortuitous concatenation of events. It is quite possible that for once fiction has been stranger than truth; but it will, at any rate, always remain a very remarkable concatenation, and psychologically enigmatical. What the general went to Servia for appears from a letter which he wrote to the *Russki Mir*, the journal of which he had become the proprietor since he had exchanged the sword for the pen:—

"I proceeded to Servia with the object of making myself acquainted with the real state of affairs in the Turkish territories, in order that, in communicating information to my own newspaper, I might be enabled to appreciate correctly the intelligence which is transmitted to Russia chiefly through the Austrian press, which is hostile to all Slavism generally. I chose the route by way of Kisheneff and the Danube, along the whole course of which, commencing from the Russian frontier to the Servian boundary, committees were formed, towards the end of last year, for organising the plans of the Bulgarians in their approaching struggle for independence.

"Commencing from Bolgrad (a Bulgarian colony which fell away from Russia and became incorporated with Roumania by virtue of the treaty of Paris), I everywhere heard the same thing, which was to the effect that all had been done that was possible by the people for the impending struggle. All the arms that could be found in Roumania had been bought up; many rifles, which had been distributed by the Turkish government among the Mussulman population, had been obtained by the Bulgarians, and that powder was being manufactured in many places by the people themselves. Considerable stores of provisions had been removed to the Balkans, and property secreted under ground.

"'We only expect,' I was told, 'a general signal for attacking the Turks, after first

removing our families and cattle to the mountains; we still, however, require leaders and unanimity. We are keeping the people back so as to avoid useless sacrifices by a premature rising!'

"I doubted the correctness of this information, and particularly as regards the enthusiasm of the committees being shared by the Bulgarian people across the Danube. The subsequent outbreak, however, confirmed the statements made to me. At the present moment, and now that a fortnight has elapsed since the first commencement of hostilities, the insurgent Bulgarians may, according to information possessed here, be numbered by thousands. Their movements are regulated by a fixed programme. The Bulgarian military organisation is based on a gradual scale, commencing from a desiatka (ten men); ten desiatkas form a cheta, ten chetas a voevodstvo; ten voevodstvos a head voevodstvo, the command over which will be intrusted to a commander-in-chief. Seniority among the commanders will be reckoned from the day of their taking part in the insurrection. Until the people are seasoned under fire, all the military movements will be confined to partisan attacks on the communications; consisting chiefly in the destruction of railways, telegraphs, interception of couriers, posts, &c.* *An attack of Turkish detachments will only be allowed under specially favourable circumstances, and under a considerable superiority of strength over the enemy. The first acts of the insurgents have been in strict accordance with this programme.*

"After quitting Bucharest I reached Belgrade, where I found that preparations for war were being pushed forward. As is known, the military force of the principalities consists of militiamen (of regular troops there are only 4,000 or 5,000), who can be all mustered in fourteen days. The Servians, relying on Russia, remained quiet for eleven months, enabling the Turks to concentrate along their extended frontier about 60,000 men, a considerable quantity of Krupp artillery, and to form several fortified camps. The justice of their complaints against diplomacy can thus be understood. You will readily perceive why my arrival excited such sympathy. Not only at Belgrade, but also during my excursion into the interior (which I undertook, with the sanction of Prince Milan, for the purpose of examining, amongst other things, the state of the fortresses), did I hear of the strong hopes which the Bulgarians placed in their Russian brethren. This feeling of sympathy, expressed, may be, with greater strength at the present critical moment, always exists in the hearts of the Servian people, as is proved by the presence, in every peasant's hut and wayside station, of the portraits of our emperors side by side with those of their esteemed princes of the House of Obronovitch. Wherever I passed the people shouted, 'Long life to our Russian brethren! Long life to our Orthodox Russian Tsar!'

"On my return to Belgrade a proposal was made that I should enter the ranks of the Servian army. All vacillation on my part would, of course, have been misplaced; a refusal would have been tantamount to a desire to avoid the danger which threatened a kindred country from all sides. After the survey made by me of the advanced positions, my departure from Servia would have been interpreted by the enemies of the Slavs, who are very numerous, in the sense that I had become convinced of the impossibility of the contemplated struggle. My examination, however, of the real state of matters, assured me of the contrary. Servia can muster 125,000 well-armed troops, with 200 rifled guns, and 24,000 horsemen for scout and outpost duties. In addition to this the country is able to command 100,000 armed men for the protection and defence of their families and dwellings.

"It may generally be said that Servia possesses many natural advantages for a successful struggle against the Turks. Victory, however, is in the hand of God. The nation is fervidly devoted to the Obronovitch dynasty, and to its present representative, Prince Milan. Everything that we hear in Russia about the Karageorgevitch party, which is secretly supported by Austria, proceeds from the Austrian press; and every true Servian regards the few partisans of that party, who are in the pay of Austria, with the greatest contempt.

"The communistic outbreak at Kragujevatz, which has been purposely magnified by the Austrian press, was a childish bid for notoriety by a few hair-brained young men thirsting for notoriety. I conclude this letter by expressing the hope that my

* The etc. probably means "casual massacres."

countrymen will not condemn my determination to place myself in the ranks of the Servians in the impending struggle for the emancipation of the *Balkan Christians* from the degrading and insupportable Turkish yoke."—These last words, the "Balkan Christians," left no doubt as to the general's intentions. Yet the very next day we find Consul White writing a pottering despatch, to the effect that, "after hearing most conflicting accounts during the day, it has hitherto been always possible, in the end, to ascertain that these reports are, at any rate, premature." Then follow a number of "probables" and "possibles," "likelys" and "unlikelys," varied with a few "said to be's," and winding up with the statement, "that an attempt will not improbably be made to open new centres of insurrection in Bosnia." Again, on June 12, he writes as though Bosnia were to be the scene of offensive operations, whilst every stable-boy in Belgrade knew perfectly well that Bulgaria was to be the scene of operations, and every cobbler that it was impossible for Servia to take any action in Bosnia for fear of Austrian intervention, which had been plainly threatened.

However, on Tchernaieff's return from Alexinatz, he accepted a commission in the Servian army without giving, as Mr. White wrote, time to the imperial government to raise any formal objection to this act on his part. Still Mr. White did express a "belief" that General Tchernaieff had been in negotiation with some parties in Belgrade with that view for some months, and that his opinion of the attitude that Russia would ultimately take in the question, had more to do with this bold act on his part than any excessive confidence in the military resources of the principality.

One of the parties here alluded to was M. Kartzoff, the Russian consul, who assured Mr. White "that this act of General Tchernaieff's took him quite by surprise, and that he considered this step on the part of the Servian government as wanting in proper deference to his own government."

But whatever M. Kartzoff may have considered, his government showed no signs of displeasure worthy of any attention, and simply contented itself with a formal denial that General Tchernaieff had received any military command in Servia. It was left to the *Agence Russe* to make this denial. This *Agence Russe* is a news and telegraph agency, supported by the government, in order to supply the foreign press with "authentic and reliable information on Russian affairs." What reliance is to be placed on the utterances of this agency appears very plainly in this matter of General Tchernaieff. The *Agence Russe* said (and its sayings were reported by Lord Loftus to his government with all the weight of authority), that they were "in a position to affirm that M. Tchernaieff, who was a retired general, had not received any kind of military command in Servia, and that he was only there in his character of newspaper correspondent, as was proved by the telegram from Belgrade, signed by himself, and which was copied from the *Monde Russe*, which is his paper. But what is true was, that this general and other retired Russian officers, influenced by their sympathies and by the prospect of impending conflagrations in Turkey, had left for Servia or Montenegro, and that probably they were not the only ones who had done so. These," the *Agence Russe* continued, "were all symptoms of very imminent danger, and which proved that not a moment must be lost if it was to be averted."

It was, however, never intended that the danger should be averted; and thus the Servian ministers and their newly-made friends went on with their military preparations with as much energy as ever.

Meantime events had been rapidly culminating in Constantinople to a crisis. For some time those who were behind the scenes had been aware that some movement was in progress which, from its depth and extent, was calculated to lead to important results. For some time the discontent felt by the subjects of the Sultan at the way in which they were misgoverned had been increasing in intensity, and was no longer confined to the Christians, but had extended to the Mussulmans themselves, until the matter was taken up most seriously by the Softas, who may best be described as the educated youths and the students belonging to the upper ranks of Moslem society, and may be regarded as, to a very great degree, representing the intelligent public opinion of the capital, if not of the empire. These Softas were animated by a determination to obtain the entire reform of the administration, which alone could save the empire from the total and speedy ruin with which it was threatened, especially in

consequence of the conduct of Mahmoud Pasha, who was looked upon as directly responsible for a large share in the desperate state of affairs. It was he, they said, who during his first administration encouraged the Sultan in all his caprices, being only anxious to retain his majesty's favour, and totally indifferent to the welfare of his country. Mahmoud, they said, must be removed; for the Sultan having once been taught to consult nothing but his own humour, no subsequent minister was able to restrain him; those who attempted it being invariably dismissed within a few weeks. Their first object, therefore, was to procure the dismissal of the obnoxious vizier, and the nomination of Midhat Pasha, who, as the champion of the reforming party, was the only man in whom much confidence was placed. The Old Turk party, however, preferred Mehemet Rushdi Pasha, who though enjoying general respect as an incorruptible and patriotic statesman, was not supposed to have the power to obtain from the Sultan the concessions and limitations of his authority that were considered necessary, and which might possibly still preserve his throne, if, indeed, this was not too late. With this idea, the word "Constitution" was in every mouth, without there being any well-defined understanding what it meant, except that it signified the establishment of some popular or national control over the purely arbitrary will of the sovereign.

The Softas, knowing themselves to be supported by the bulk of the nation, Christian as well as Mussulman, in calling for this control, determined not to desist in their efforts till they had obtained it, and texts from the Koran were circulated with a view of proving to the faithful that the form of government sanctioned by it is properly democratic, and that the absolute authority wielded by the sovereign was a usurpation of the rights of the people, and a contravention of the holy law. At the same time, both texts and precedents were appealed to, to show that allegiance is not due to the sovereign who neglects the interests of the State. These views met with general approbation; disaffection ran through every class, and no one thought of trying to conceal his opinion. Even among the porters in the streets, the boatmen on the Bosphorus, and pashas who had filled or were then filling the very highest posts, civil or military, the same language was held, and not a single quarter could be named in which the Sultan could with any confidence have looked for support against a well-organised attempt to depose him. So universal was the feeling against the government, as carried on by the Sultan and his favourites, that the highest officers in the army publicly declared that neither they nor their men would oppose the Softas in any movement they might make. And more significant than all was the understanding that existed between the Softas and the Christians; for when it became known that a vast conspiracy was being organised, the first thought of the Christians naturally was that it was to be directed against them: but the Softas at once declared that there was not the least intention to interfere with the Christians. On the contrary, they would only be too glad if the Christians would assist them in their plans, at least by not opposing them.

A painful period of suspense followed upon this action of the Softas, and the air, so to speak, was big with portentous events. At last the first blow was dealt. On May 10th a large assemblage of Softas met Prince Izeddin when on his way to the Seraskeriat in Stamboul, and stopping him, bade him return and inform the Sultan of their demands—viz., the dismissal of the Sheikh-ul-Islam and the Grand Vizier. His majesty, on receiving the message, at once sent his secretary to the mosque, where upwards of 2,000 were assembled, in order to ascertain more precisely what it was they wanted, and by the next day at noon both their wishes had been complied with, so great was the terror at the palace. But this was not all that the Softas required. They intended to require the Sultan to modify his prerogative altogether, and to grant a representative and constitutional form of government, so as to ensure an efficient control over the finances of the State; and at the same time, although Mehemet Rushdi Pasha, the new Grand Vizier, was universally respected, the appointment of Midhat Pasha was still to be insisted upon.

Had the Sultan known, or been able to gauge the character of the movement, he might have avoided what was to follow by complying with the plainly-expressed desires of the Softas, and appointing Midhat Pasha Grand Vizier, and calling upon him to frame a constitution in the sense demanded by all his subjects alike. But either, as is

most probable, he knew nothing at all about the matter, or, knowing it, he felt strong enough, in the possession of his ironclads and the army he had organised, to be able to defy his rebellious subjects. He did not know that neither his army nor his navy would fire a shot to save him.

Thus the catastrophe came. The Softas, led by Midhat Pasha, had learned their own strength. They had succeeded in intimidating their sovereign, and they had learned that their object was approved of by the nation at large; and now, seeing that the Sultan still refused to comply with their wishes, they determined to strike the final blow.

The arrangements for ensuring success, and for preventing the probability of disturbance, were made with consummate skill and foresight; but it is still a matter of wonder that a plot, of which so many were in the secret, and the existence of which was indeed generally, although vaguely, known to the public, should not have reached the Sultan or his immediate favourites. It can only be explained by the fact that in the capital there was hardly a man who did not desire his overthrow, nor a friend disposed to warn him of the dangers—not even Sir Henry Elliot, who was excellently informed upon the subject. But be this as it may, the Sheikh-ul-Islam, the highest authority that Mahommedans can appeal to, declared the lawfulness of deposing the sovereign. The two following questions were submitted to him by the Ulema:—

"If the first of the true believers gives signs of madness and of an ignorance of political matters; if he spends the public money on himself in excess of what the State or the nation can grant him, will he not thus become the cause of troubles and of the public ruin? Ought he not to be dethroned?"

To this the Sheikh-ul-Islam answered by a simple "Yes," and, signed by his name, "Hassan Hairoullah," the questions and the answer became a "fetva," of which the authority would be admitted by all true Mussulmans.

Having obtained this fetva, the Softas then proceeded to lay it before the Minister of War, Hussein Avni Pasha, and the Grand Vizier, Mehemet Rushdi Pasha, who at last gave his consent to the execution of the project, which it was immediately resolved to carry out at once.

By this decision Mehemet saved the country from the most imminent danger; for the public exasperation had arrived at such a height, that the Softas and the people would undoubtedly have attempted a revolution, which, in their hands, would have been attended by all the evils and dangers of a popular movement, but which, conducted by those in authority, might pass without disturbance or even uneasiness.

It is true that, when those who are entrusted by their sovereign with power, turn that power against him, there is in such conduct an appearance of treachery that must create a painful impression; but in the case of Mehemet Rushdi Pasha, his conduct was guided by no considerations but those of the purest patriotism, for there was not another Turkish pasha so universally regarded as incorruptible, and at the same time so free of all suspicion of being actuated by motives of personal ambition. Though he had long been convinced that the personal character of the Sultan rendered the utter ruin of the country inevitable, still he shrank from the act of violence to which he was at last driven, when, against his own wishes, he was placed in the high position which enabled him to secure the success of the plot. The Minister of War and Marine also acknowledged the authority of the fetva, and thus we have the singular spectacle of a despotic government overthrown by the law in accordance with the will of the people—by the people in accordance with the law.

Thus the consent of those having been gained who could have predicted the success of the plot, all possibility of resistance and risk of disturbance were prevented by precautions taken by the Porte. On May 30th, the palace was surrounded, on the land side, by troops before daybreak, and by boats from ships of war on the other. At the same time, the heir to the throne, Murad Effendi, was taken by some of the ministers to the War Office, and there proclaimed Sultan, whilst the announcement of his dethronement was made to Abdul Aziz by a pasha, who convinced him that resistance was useless; and in spite of his fury and despair, the Sultan was taken in a boat with his family to the old palace, which he was to leave no more alive.

At break of day, May 31st, the accession of Sultan Murad V. was joyously proclaimed amidst salvoes of artillery from the land batteries and the ships

of war. Throughout the empire the rejoicing was universal. The new Sultan was hailed as a model of perfection, and, assisted by Midhat Pasha and the good-will of the foreign powers, there is reason to believe that a real reform might have been brought about. But absolute tranquillity would have been necessary for this as well as a reorganisation of the finances, which some sanguine people imagined would have been considerably assisted by the money it was hoped would be found in the late Sultan's private coffers. But all that was found amounted to no more than about £100,000 in cash, £1,000,000 in jewelry, and £8,000,000 of Turkish bonds, representing a market value of about £320,000. As for Sultan Abdul Aziz, although the most explicit assurances were given as to his safety, and the Queen herself telegraphed to express her hopes that no violence would be done to him, there were few people who did not believe that his days were numbered. When, therefore, his decease was announced about a week after his deposition, but little surprise was expressed, except at the manner of his death —suicide. The news was received with incredulity, cases of suicide amongst Moslems being extremely rare. But an inquest was held by nineteen medical men, among whom were Dr. Dickson, physician to her majesty's embassy, the doctors of the Austrian and French embassy, and others of high standing, Turkish, Greek, and Armenian, who all certified unanimously that the death was the result of suicide, and that the deceased Sultan had opened the veins of his arms with a pair of pointed scissors. Dr. Dickson told Sir Henry Elliot that neither he nor any of his colleagues entertained a doubt that the act was voluntary. It was also proved that, since the Sultan's deposition, all arms and cutting instruments had been kept out of his reach, but that on June 4th he asked for a pair of scissors to cut off his beard. A small pair was given him, and he then turned his attendants out of the room and locked the door, which was broken open by his servants when his mother heard her son's groans, and he was found on the point of death. The next day he was buried in the mausoleum of his father, Sultan Mahmoud, with every mark of respect.

These startling events were very differently interpreted in various quarters. In England it was hoped that a new era had dawned for Turkey, and that Midhat Pasha would institute a series of reforms, and see that they were carried out with all the energy of which he was capable. On the other hand, the Russians were exasperated by what they considered a British intrigue, and followed out their plans with more energy than ever. In Constantinople itself the ferment was kept up, so that serious reforms were almost impossible. The terrible state of suspense in which the capital was held, was considerably increased by the assassination, a fortnight later, of Hussein Avni Pasha and Raschid Pasha.

A certain Hassan, a Circassian by birth, and who some years ago had left the military school with the rank of lieutenant, was appointed captain, to be sent to the army of Bagdad. For certain reasons he was retained at Constantinople, and employed in various posts; but when he was appointed to the rank of adjutant-major, and to a post in the said army, he advanced various excuses for deferring his departure: finally, he bluntly refused to obey, and was therefore imprisoned. Being released, with a view to his departure for his post, and having promised to set out for Bagdad the next day, he proceeded in the evening to the house of the Seraskier. Here he was informed that the latter was at a meeting of his colleagues at the residence of his highness Midhat Pasha, to which he at once proceeded. The sentries, believing him to be still an aide-de-camp, did not prevent his entrance into the council-chamber, where he fired point-blank at Hussein Avni Pasha with the revolver which he had in his pocket, and killed him on the spot. While the rest endeavoured to seize him, Raschid Pasha, Ahmed Agha, a servant of his highness Midhat Pasha, and a soldier, shared the same fate, whilst the Minister of Marine, as well as another soldier, were wounded, so desperate was the resistance of the murderer.

The terror in Constantinople at this sanguinary drama was intense; for that one man should have penetrated into a council of ministers, and killed seven persons and wounded eight others before he could be secured, is an act for which scarcely a parallel could be found. Everything proved that the intention of the assassin was to kill the Minister of War, and then to fight his way out and effect his escape, for which he had prepared the means by having a horse at hand to take him to the landing-

place, where he had left a boat. But finding, upon going to the Seraskier's house, that his highness had gone to the council, and as he was himself to be sent to join his corps at Bagdad the next day, his only chance of being able to carry out his design, was by endeavouring to force an entrance there, which he succeeded in doing. As for the unfortunate Raschid Pasha, he was present at the council by what may be called an accident or a fatality; for the ministers invited to attend this night council had been confined to those whose country-houses were in the neighbourhood, while his was at some distance. Hearing, however, that the Grand Vizier proposed to hold a council, and a part of his family being still in town, he determined to remain after office hours for the purpose of attending it; and by another fatality he took the seat immediately next to the Seraskier Pasha, Hussein Avni; and so sudden was the onslaught, so great the confusion, that the Grand Vizier could not say for certain whether he was shot immediately after his colleague, or whether it was after the Minister of Marine, who, displaying remarkable courage and energy for so old a man, had seized the assassin from behind, round the waist, and prevented his escape; for from that moment there was a scene of indescribable confusion. At first the ministers were under the impression that they were attacked by a band of conspirators, and tried to escape to the adjoining apartments, while the murderer, in a state of frenzy—and, as is thought, partial intoxication—was using the four revolvers with which he was armed, and his sword or yatagan, upon all who were within his reach. The Minister of Marine, who displayed such courage and energy, only received severe but not dangerous flesh-wounds from the assassin's dagger; but an aide-de-camp and an attendant who went to his assistance were shot dead; and when the soldiers, who arrived from a neighbouring guard-house, broke open the door of the room in which he had locked himself, they found he had set fire to the room, and before they could run him through with their bayonets, he had killed and wounded several of their number. The next day he was degraded, and hanged early in the morning in an open space near the Seraskeriat.

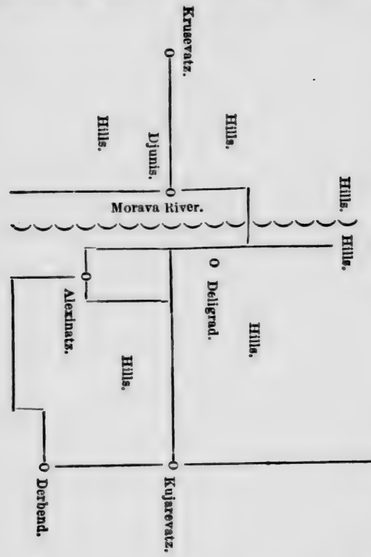
In the midst of these disturbances, the Prince of Servia, following the counsels given to him by his foreign advisers, addressed to the Grand Vizier a lengthy letter, dated June 22, in which, after having mentioned some unfounded complaints, and spoken of the concentration of troops on the frontier, he finished by declaring his resolution to co-operate, by the employment of the military forces of Servia, in the establishment of a state of things favourable to the common interests of the empire and the principality. At the same time he had the audacity to beg the Sublime Porte to facilitate his mission by giving to the imperial authorities the order to send home what he called bands of robbers (alluding to the irregulars), and to enjoin on the imperial troops not to oppose his efforts, so that he might proclaim loudly the principle of the integrity of the empire! Simultaneously, in a despatch addressed to the agent of the principality, M. Ristich invited him to propose to the Sublime Porte to confide to the government of the prince the administration of Bosnia in return for the annual payment of a fixed and invariable sum, in proportion to Bosnia's share of the public debt.

This cool proposal did not quite recommend itself to the Porte, which, however, proposed to reply to this letter of Prince Milan by refuting, one by one, the accusations which he had brought against them, when the news was received from the civil and military authorities of the vilayets of Bosnia and the Danube of the entry of Servian troops, with their artillery, on the 1st and 2nd of July, upon Ottoman territory at three different points, which caused the immediate advance against them of the imperial troops.

On the other hand, the Prince of Montenegro also addressed a long telegram to the Grand Vizier, and declared, for his part, that the equivocal situation must now yield to the more clearly defined position of declared hostilities. Thus the two principalities put an end to their equivocations, and openly declared war to the Porte.

CHAPTER IX.

THE SERVIAN WAR OF 1876.



THE primary object of the war, as declared by Prince Milan, was to have been the emancipation of the Christian Serbs in Bosnia, and the establishment in that province of a new state of things, by means of an armed occupation. Following this plan, the Serb forces were to have entered Bosnia, and concentrated all their energies on this special object. But as soon as General Tchernaieff had acquired a footing in Belgrade, this plan was greatly modified —in fact abandoned—and the chief energies of the Servian commanders were directed against Bulgaria. The troops entered Turkish territory at three points; in the south under Tchernaieff himself, in the east under Leschyanin, and in the west under Alimpich. In the south, General Tchernaieff concentrated his principal forces about Nisch, where he kept them in comparative inactivity for nearly three weeks, with a great show of mystery; whilst the troops sent into Bosnia did not act anywhere in a sufficiently large body; they were scattered and disseminated from the commencement, and failed in penetrating in any direction so as to produce any encouragement on the unarmed rayahs, or any impression on the native Mahommedan population. No greater success attended the offensive movement on the eastern frontier, which soon had to be abandoned, a strong Turkish force having succeeded in pushing its way to Kujarevatz, when, after some hard fighting, the line of the Timok was given up, and Saitschar was evacuated by the Servian troops, by an order of the general, without any serious attempt to retain possession of that important line some days longer, which was thus left to the mercy of Osman Pasha, who, however, did not consider it worth while to occupy the place, or seize upon the abandoned line.

In the rear of this line, and between it and the Morava, the Servians continued in the possession of another and a much stronger mode of defence, in the shape of natural mountains, and of a few passes or defiles, which, if occupied by really good troops, might have rendered access to the Morava, to a hostile army and to its artillery, almost impossible. But within the short space of six weeks there was sufficient evidence, however, that the untrained ploughmen of Servia, although in appearance presenting an excellent material for forming soldiers, had not acquired hitherto the qualities indispensable to fight the battles of their country, and that in the field they thought much more of their homes and farms than of the glory to be achieved by prowess. Cases of self-mutilation were very frequent, and the novel effect of artillery upon them was greater than is known to have been exercised upon any other soldiery.

Thus, beyond having burned a few villages, such as Florentin on the Danube, and the occupation of the Babinaglava chain of mountains, on the road to Pirot and Sofia, the wonderful plans of General Tchernaieff came to nought. He could neither advance nor hold the positions he had occupied for want of an enemy to defend them, and as soon as the Turks advanced, though slowly—yavash, yavash —according to their phlegmatic habits, the Serbs fell back, beaten at all points from the positions they had occupied within Turkish territory, and took up defensive positions. Instead of invading Turkey, their great anxiety was, by the middle of August, to save their own country from invasion. The valour and genius of their soldiers and officers did not at all seem sufficient for the purpose to the prince's government, and they forthwith centred all their hopes upon foreign mediation, for which they abjectly clamoured, and entreated the powers to save them from the "unspeakable Turk," whose just wrath they had provoked. Shelled out of Saitschar by Osman Pasha, Leschyanin barred the road to Banya, which threatened the positions at Alexinatz in flank and rear; whilst Generals Zach and Tchernaieff held the heights of Alexinatz, where they made their first stand before falling back upon their second line at Djunis and Deligrad.

Alexinatz is a small town close to the frontier, some little distance from the right

bank of the river Morava, and is on the junction of two high-roads, one running from Nisch to Belgrade northwards, and the other eastwards to Kujarevatz and Saitschar. The following sketch clearly shows the position of these places:—

The opposition of the Servians to the advance of Ali Saib Pasha down the left bank of the Morava was very slight. Their intrenchments were insignificant, and their resistance apparently directed to ascertain the strength of the Turkish force in their front; the main expeditionary corps under Ahmed Eyoub Pasha being at hand on their flank. This corps having retraced its steps from Kujarevatz to Derbend, Osman Pasha keeping the forces at Saitschar well employed, had thence marched, halting two days on the way, across very difficult country, *viâ* Nisevatz, along the skirts of the frontier to Alexinatz, where it effected its junction with Ali Saib Pasha on Monday, the 21st August.

The strength of the united Turkish expeditionary force was 38,500 regular troops of all arms, with 188 field guns (including two mountain batteries of four guns each). That of the Servian army was estimated at from 30,000 to 50,000 men, who were distributed in a line reaching from Alexinatz to Deligrad, across the heights on the left bank of the Morava.

Though of course expecting the enemy to make a stand here, the Turkish commanders were hardly prepared for the formidable character of the fortifications they had in view, and which were only the outer defences on the southern face of a large intrenched camp, extending to a distance of six miles as far as Deligrad. Far worse troops than the Servians, and less ably commanded, should have been able to hold indefinitely such a position against any odds whatever; much more so against the Turkish army, unprovided, as it was, with engineer department, siege-train, bridge equipments, or other means and material generally requisite for conducting effectively the attack. The engineering was done by artillery officers, and was restricted to the construction of simple intrenchments with sunken batteries for field guns. Against a position naturally so strong and bristling with works, scientifically planned for mutual defence, a *coup de main* could hardly be successful without the intervention of accidents and contingencies of rare and exceptional occurrence in modern warfare. The greatest difficulty of the situation, and one with which the Turkish commanders were fully impressed, consisted, therefore, in the loss of time involved in regular approaches.

Thus, finding that the Servian works covering Alexinatz were unassailable by direct attack, Ahmed Eyoub Pasha determined to cross the Morava and unite his force with that of Ali Saib Pasha on the heights bordering the plain on the left bank of the river. The valley here is three miles wide, narrowing in a north-westerly direction to two miles opposite to Alexinatz. Thence it appears again to open out in the direction of Deligrad, and the course of the river throughout to approach the base of the heights on the right side of the valley.

The passage of the river occupied Tuesday and Wednesday, and was effected by means of a trestle-bridge, and a bridge of open wooden pontoons, with a deepish ford between them, without the slightest interruption from the enemy. Two days were occupied in re-examining the position of a Servian division strongly intrenched on heights parallel to those occupied by Ali Saib Pasha's corps, which corps the division in question had repeatedly assailed with sufficient effect to necessitate its being reinforced by seven battalions from Ahmed Eyoub Pasha's army.

The first important action consisted in turning the right flank of the Servian position, and involved a considerable *détour* round the head of the ravine (opening on the plain of the Morava Valley) which separated the combatants. It commenced at 8.30 A.M., and for four hours was restricted to an artillery engagement between the batteries, at a distance varying from 3,500 to 4,500 métres, the preponderance of metal being on the side of the Servians, and of number of pieces, three to one, on the side of the Turks. At a little after noon the infantry came into action; their assault was spirited and well sustained; but the resistance of the enemy, availing himself of the woods, and fighting behind intrenchments, or cover commanding open spaces, was sufficiently steady and persistent to protract the engagement until dark. It was 9 P.M. before firing ceased. The retreat of the enemy within the lines of Alexinatz was not molested. He lost one gun and three prisoners only. As to the artillery fire, though the Servian batteries appeared often to be temporarily silenced, one of their guns only was dismounted, while in the Turkish batteries hardly a man was wounded. The little effect produced by what, to observers, appeared to be excellent practice, more especially on the part of the Turks, is to be only accounted for by the fact that the fire being direct from batteries crowning heights, and the soil being black loam, the shells, armed with percussion, and not with time fuzes, instead of grazing, invariably imbedded themselves and burst innocuously.

The Turks commenced the action four hours too late. They made no effort to throw up batteries in advance as the day progressed. They omitted, as was perfectly practicable, to send forward guns with the infantry, operating to turn the right flank of the enemy's position, and no steps whatever were taken with their large available reserves to engage the enemy's supports in the plain, and cut off his line of retreat. Yet all these oversights had been anticipated in the plan of attack, proposed by the chief of the staff, which, had it been followed, must have compelled the enemy to retire by the upper road to Deligrad, and have issued probably in the loss of all his guns. As it was, the victory was barren of decisive results. The enemy was safely ensconced behind the lines of Alexinatz-Deligrad, with the Morava winding near the base of his position, and the Turkish army on the heights which bound the plain forming the valley of the Morava, on the left bank of the river, passed four days idly observing him.

Thus, after six weeks' hostilities, the two chief armies had been brought face to face, and each was apparently waiting for "something to turn up," which would give one an advantage over the other. Both were bivouacked in their respective lines, and while fine weather lasted they operated on equal terms; but if the defence were to be protracted, when the autumnal rains set in, the Servians would possess this advantage over the Turks—that while for the former shelter would be provided on the spot for their ambulances, ordinance stores, and provisions, &c., the latter would be dependent for hospital accommodation and commissariat of all kinds upon their depôt at Nisch, distant sixteen to eighteen miles, with no better means of transport than the bullock-carts of the country, ill suited for heavy traffic. Thus far the standing crops afforded an ample supply of forage for the whole army; but as the season advanced this supply failed, and the intervening country, not here only, but along the whole line of frontier, from six to eight miles on either side, so far as villages were concerned, may be described as a desert. This was owing to the Servians, who began the work of desolation on Turkish soil for the purpose as well of harrying the Mahommedan inhabitants, as of compelling the Christians to quit their fields and join the insurrection, whilst the Turks fully imitated the example with like effect on Servian territory.

During the latter part of August several minor engagements were fought, resulting in the gradual advance of the Turks to some two miles on the heights bordering the valley of the Morava to the west, thus bringing its left front opposite to the centre of the Servian position on the heights bordering the valley to the east. The intervening plain, well cultivated with grain and studded with oak plantations and copse, varied in width from three miles at Alexinatz, to five miles or more at Deligrad. The river, after leaving Alexinatz, approaches, in a very tortuous course, with short reaches and deep bends, the base of the Turkish heights, until, beyond the latitude of Deligrad, it turns westward to enter a defile of the mountains. The

Turkish heights partake of the character of parallel spurs, separated by deep ravines, which open into the valley of the Morava, whilst the Servian heights consist of a lower continuous range, extending in one uninterrupted line, like a huge glacis, sloping gently to the plain from Alexinatz to Deligrad.

Alexinatz itself lies in a hollow at the southern extremity of this range, and is covered southwards by a spur from the mountains in the rear, which gradually decreases in height until it abuts upon the river. This spur, strongly fortified and intrenched, formed the southern part of the Servian position, before which Ahmed Eyoub Pasha's force was bivouacked some days, but which was found to be unassailable. Deligrad is a mere hamlet, situated at the base of the range in question, at its northern extremity, where its crest becomes more elevated, and unites itself with the mountains beyond. The Turkish heights northward, in like manner, gradually rise into the mountains, which, at this point, appear to close the valley of the Morava.

The Servian heights on the right side of the valley, more especially towards and beyond Deligrad, were fortified with batteries and intrenchments. On the left side of the valley, too, a strong Servian division daily engaged the Turkish flank from batteries of position, constructed on a parallel and more commanding range of heights to cover the defile of the Morava as well as the road to Krusevatz. During the day these batteries were, here and there, supplemented by field-pieces pushed forward on prominent slopes and peaks in advance. The range across the ravine being, however, extreme, the Servian fire was not sufficiently effective to dislodge the Turkish brigade there posted, or to inflict upon it serious loss.

The Turkish plan of operation was to pierce the centre of the Alexinatz-Deligrad position. For this purpose they constructed a trestle-bridge, put together by Bulgarian carpenters, over a bend of the river, out of range of the enemy's guns, which thus enabled them to threaten either flank of the Servian position. The Servians soon became aware of what was intended, and made several fierce attacks, during which the Russian officers greatly distinguished themselves. They led their men to within 300 yards of the Turkish batteries; but here they were received by so fierce a fire, that they had to fall back with great loss.

The result of the war so boastfully begun was thus, so far, highly discouraging to the Serbs; and diplomacy was called in to save the prince's government from what his own men and his Russian friends could not save him by force of arms. The old plea was put forward—the barbarity of the Turk, and the disgrace to Christianity, if Servia should be left to be devastated by the inhuman enemy against whom she had undertaken her "holy mission."

Thus M. Ristich, on August 24th, appealed to the powers to mediate between Servia and Montenegro and the Porte, Prince Nikita joining in the appeal with him. He supported this appeal with sundry documents relating to the barbarities of the Turks, and forwarded a report from Colonel Horvatovich, giving an account of what he saw at Kujarevatz after the Turks had withdrawn to concentrate their operations in the valley of the Morava. Colonel Horvatovich wrote—

"On my return to the town of Kujarevatz, I have the honour to inform you of the following:—

"The whole town is burnt; hardly one house in fifty has escaped the flames; and amongst those which are still standing, it would be difficult to find one that has not been sacked in such a way as to have lost at least the half of its value.

"All Kujarevatz presents the most melancholy example of what vandal hands can do. A few chimneys and some blackened walls are left standing, but all the lightly-built houses have been completely destroyed.

"The enemy was not content with burning the church and the cabinet containing the images of the saints, but has broken the bells in pieces, some of which have been found at the other end of the town; carried the clock away, and fired shots through the roof and at the sacred pictures. Many of the latter have been found in the streets torn and soiled with filth. The flags which were in the church lie scattered in pieces in the streets. In a word, they have *profaned God's sanctuary* in a manner more horrible than it is possible to conceive.

"Everything that the hand of man could destroy during these few days has been destroyed with an energy and activity which must astonish every one.

"Bodies have been thrown into the wells, and wherever there was drinking-water.

"Every ten steps one comes across the *remains of a dead pig in a state of decomposition, and half consumed by worms and flies.* Close to the magazine, the burnt body of one of our captains, or of an aide-de-camp, known by the distinctive marks of his rank, which had remained intact, was discovered tied to a tree.

"In the street of Djonitch a body was found, recognised by his clothes as that of a citizen of the town. His legs were entirely flayed from the thighs to the feet.

"The body of a man, in like manner recognisable from his clothes as an inhabitant of the town, was found with a piece of iron in his body in the *café* of Mita Yanochevitch. An examination of the body, pierced in many places, shows that the Turks had tortured him, and killed him with a red-hot iron.

"Petko Vesselinovitch, of Kujarevatz, whose leg was broken before we left Kujarevatz, had remained at home. We found him killed. Govko Kaissio, also of Kujarevatz, was tortured and killed in his house by a red-hot iron. In the bakery of Ivrenka Constantivovitch was found the body of one of our soldiers, who must also have been tortured, for some iron spits were found near the corpse.

"In addition to the numerous bodies found in the town, some have been found in the maize fields: I am going, therefore, to have these traversed by skirmishers, who will bury the bodies.

"The smell of all these corpses is so great that, from fear of disease, I have not ventured to let my troops halt for a moment at Kujarevatz. What I have just related can only give you a faint idea of the reality. It is what I noticed at the first glance.

"I have taken measures that the citizens who have returned shall, with the help of a battalion, search through the town and neighbourhood, under the direction of a trustworthy person, Milan Atjimdvitch, bury the bodies, and draw up a procès-verbal, which will be sent to me.

"To judge from the stench, which has spread as far as half a league from the town, and the myriads of flies which fill the air in the neighbourhood of Kujarevatz, there must still remain a great number of human bodies, the identity of which cannot be determined.

"The state of decomposition of the bodies is already so advanced, that even when the head remains it is impossible to distinguish the features.

"All the houses in the neighbourhood, and especially the little houses built in the vineyards, have been burnt; and as these houses were generally surrounded by fruit-trees, or other kinds of trees, the flames have scorched them, and the surrounding country presents a most wretched appearance.

"In short, I am unable to give a true description of this afflicting sight; I can find no words to describe it.

"I will forward to you immediately the further information which may hereafter reach me."

These complaints came with an ill-grace from a government whose habits in peace were about the same as those of the Turks in war. When M. Ristich speaks about the "profanation of God's sanctuary," he should have remembered, first of all, that no more blame is to be attached to the Turks for despoiling a Servian church, than to Christian troops who loot a pagan temple, and sell its idols to the curiosity-dealers. Secondly, he should have remembered that the Servian government also "profanes God's sanctuary" for theatrical purposes, in direct contravention of the treaty concluded between it and the Porte. According to this treaty, when the Turks evacuated Belgrade, the mosques were to be respected, and kept in repair. But not only has this not been done, but one of the mosques has been turned into a gas-factory, to supply the theatre with gas. As for "the dead pigs half consumed by worms and flies," it speaks rather highly for the Turks, that, in spite of the meagreness of their rations, they should not have eaten them themselves, and preferred adhering to the tenets of their religion, which forbids them to eat the unclean animal—doubly unclean in Slavonic countries south of the Danube, where their styes are built under the closets—whenever such an institution exists, which, however, is the exception in Servia.

As for the charges of torture, &c., they were denied *in toto* by Sir Arnold Kemball, who testified repeatedly to the good discipline and good-nature of the Turkish troops. During the whole of his stay with

the army he saw no cases of cruelty, except on one occasion, when he found that some of the dead had been decapitated by Bashi-Bazouks.

However, the Servians having discovered that, instead of massacring the Turks, the Turks were in a fair way to massacre them, the application for mediation was made and acceded to by the powers, the result being a suspension of hostilities until September 25th.

This suspension of hostilities, granted in hopes of a peace, or, at least, a longer armistice being arranged, was used by the two principalities, at the instigation of Russia, as a sort of political and military see-saw. As soon as Servia had agreed to one thing, Montenegro objected; and when Montenegro accepted any condition, Servia refused. Meanwhile, Russian officers and men flocked to Servia by the hundred. Committees were formed in Moscow and other cities, and recruiting carried on openly, the Russian government professing to be unable to restrain the warlike ardour and the just anger and indignation of its subjects.

Thus Colonel Mansfield, the British consul at Bucharest, wrote, on September 8th, that the number of Russian volunteers passing through Roumania to the seat of war was daily on the increase; and that the movement was organised by committees in Russia, who had permanent agents at Bucharest, Galatz, and elsewhere, to receive the volunteers on their arrival, supply their wants, and forward them to their destination. Twice a day they arrived in batches varying from twenty to sixty—sometimes more, sometimes less; they appeared to be drawn from all classes, and very many, from their gait and appearance, had evidently passed through the ranks of the regular army, while some were clearly either retired officers or officers on leave. To promote this movement, the railway authorities in Roumania were asked by persons at Odessa, whether the railway would convey 300 Russian workmen to Servia at reduced fares—a device of which the object was thoroughly transparent. Yet Consul Mansfield wrote, that though it was reported to him that some of these volunteers crossed the frontier with Bulgarian Turkish passports, which had been taken from Bulgarian peasants, who flock to Southern Russia at this season as agricultural labourers, he was disinclined to believe that the Russian government authorities would relax the very strict system of passports and visas; and that, as there could be no objection to Russians entering this country when properly provided with passports, there would be no particular reason for such a device, except, indeed, for those who repair at once to Bulgaria. But as there was no insurrectionary movement to speak of in the latter (Bulgaria), he was disposed to look upon the story as a sensational rumour!

The extraordinary character of this opinion, however, is quite cast into the shade by the following remarkable despatch, addressed by Colonel Mansfield to Lord Derby on September 26th:—

"I have, early this morning, transmitted to your lordship a telegram as follows:—'Special train with 300 Russian volunteers passed yesterday; arms scarcely concealed; disorders at railway stations; Roumanian government much embarrassed. M. Bratiano asked my advice. I recommended prudence, and, if possible, to avoid collision.' And now I shall have the honour to relate the details to your lordship.

"Last night I was spending the evening with M. Debains, my French colleague, when, about half-past ten, M. Bratiano, President of the Council of Ministers, was announced.

"M. Bratiano told me that he had just been to my house, and expressed his pleasure in being able at the same time to consult both the French and English agents on a matter of no small importance.

"It appears that a special train, conveying 300 volunteers, arrived at the Roumanian frontier from Russia on the 18th instant. Many were in the possession of swords, and others did not conceal that they had revolvers in their pockets. One individual was spoken of as General Vasilieff, or some similar name; and others, although all in plain clothes, seemed to be recognised as officers. That there had been disorders at various stations, and notably that the train left Roman, where there had been a dispute with the station-master respecting the composition of the train, amidst the howls and hisses of the by-standers.

"M. Bratiano was extremely anxious respecting the incident, and appeared to be inclined to telegraph to the frontier at Turno-Severin and stop the exit of the whole party from Roumanian territory.

"After carefully examining every point, I indicated to M. Bratiano that, although, of course, the destination and object of the excursionists was, as it were, openly avowed, it was necessary to review the details calmly and *on technical grounds, so as to give little cause for remonstrances on the part of the Russian consul-general, should the matter arrive at that stage.*

"I pointed out that excursionists in all countries employ special trains, and that they even cross the frontiers of foreign countries; that excursionists are frequently under the direction of one or more individuals; that, although for the moment munitions of war cannot be imported, there is, according to the Roumanian regulations, nothing to prevent travellers being in possession of a pistol or a gun; while a sword is looked upon as part of a uniform, with which many persons are in the habit of travelling; that the baggage of these excursionists must have been examined at the frontier, and munitions of war would doubtless have been seized; that it would be competent to the government to issue an immediate order to prohibit travellers from introducing any arms, but that to telegraph that very evening to have these gentlemen searched, and their arms, if found on their persons, taken from them, would be a retrospective act, and likely to cause inconvenience; that, according to his own showing, the Roumanian force at Turno-Severin consists of a couple of companies of the regular army, a battalion of militia, and the custom-house officers, and that perhaps the officer commanding might be wanting in tact or judgment; that an attempt to prevent these volunteers leaving the frontier might cause a collision, in which the Roumanian force might be overpowered; that regrettable incidents and perhaps bloodshed must ensue.

"The next result would be, that there would be renewed disorders at the passage of Russians through this country, and there would spring up mutual bad feeling between the volunteers and the Roumanians at the different towns and stations.

"It was true that there had been disturbances at Roman, but at other stations there had been cheers for Roumania and the cause of the Eastern Christians.

"*To save appearances*, it would be well if these volunteers could leave Severin in small detachments, and not in a collective body.

"That I seriously deprecated any measures which might lead to collision and inevitable consequences of a deplorable character; adding, that it appeared to me most desirable at the present time, when the other powers were anxious for the cordial co-operation of Russia in restoring peace, and also at a moment of delicate negotiations, to aviod any cause of irritation or even comment.

"M. Bratiano urged that the Porte might possibly remonstrate; to which I answered that, if the matter was properly laid before the latter, the representations of the government of Prince Charles would doubtless be accepted in a dispassionate sense.

"He then expressed apprehension lest the guaranteeing powers, and especially her majesty's government, would be of opinion that this government had not been consistent in its professions of neutrality.

"M. Debains reassured him, as far as the Duc Decazes was concerned; and I replied that his (M. Bratiano's) evident anxiety on the subject, and the circumstance that he had come to consult M. Debains and myself, was no small earnest of the sincerity of the professions of the Roumanian government, adding that I ventured to think that your lordship would be disposed to make all just allowance for the position of extreme difficulty in which this government is placed.

"Before coming to see me, M. Bratiano called at the Russian agency; but Baron Stuart was absent, and the vice-consul in charge had expressed a hope that the *volunteers would be allowed to continue unmolested, and tried to explain that they differed in no other way from the other volunteers, except in respect of the special train.*

"M. Bratiano had also seen Count Alvensleben, the German consul-general, but could get no expression of opinion from him.

"The minister also informed me that, on the passports of the Russian volunteers in general, it is stated that they are Russians who have ceased to belong to the Russian nationality, but that he did not know whether the last batch had similar passports.

"I beg to direct your lordship's attention to the circumstance that, in ordinary times, no Russian is allowed to change his nationality without immediately passing to another nationality, and having the whole

transaction arranged with the greatest strictness; these volunteers would, therefore, appear to have no nationality, and the whole system is evidently conceived with a view to their disavowal by the Russian government if convenient.

"M. Bratiano left us at half-past 11, in order to telegraph to Severin that circumspection was to be observed on the arrival of the special train, which would be due at the latter place shortly after midnight.

"M. Bratiano also spoke at great length on the embarrassment of this country; on its position between great and powerful States; its weakness; the maintenance of neutrality; and the conscientious discharge of their duties to the suzerain power; but I hesitate to take up more of your lordship's time with these subjects.

"It was not without some anxiety that I felt myself called upon to offer counsel on so delicate a subject as the above: and I trust that your lordship will believe that, in the suggestions which I put before M. Bratiano, I have not spoken without the maturest reflection, and have been guided by the earnest wish to recommend what appeared to me to be most prudent under the circumstances."

Thus Colonel Mansfield's only care was lest the Russians should be offended. He seems to have been animated by a perfect terror on this head; unless, indeed, it was in consequence of orders from London, or from an idea of what was desired in London—*i.e.*, to precipitate the catastrophe. This is the more likely solution when we consider that it was the same line adopted by Consul White in Belgrade. Anyhow, this despatch fully shows that the Roumanians were abandoned to Russia by all the powers; and it seems, therefore, tolerably certain that none of the powers really desired to prevent the dispute from being worked out to the bitter end.

It was therefore evident that the appeal for mediation and the suspension of hostilities had been made only to acquire fresh assistance from Russia. From all sides the proofs that this was the case came pouring in, whilst the Russian committees continued to pay their attention to the relief of the military wants of Servia. The deficiency in the number of officers was entirely remedied after the 1st of September, at which date there were already 479 Russian officers in the Servian army. Tchernaieff then turned the attention of the committees to the fact that they were in urgent want of educated non-commissioned officers; and by the first week in September, the number of Russian non-commissioned officers in the Morava army alone amounted to 592, half of whom received the medal for "bravery."

The next gap to be filled up was in the cavalry. Accordingly, 1,800 Cossacks arrived within the same period, some of them splendidly mounted, and quite equal to the Turkish cavalry, even to the notorious Circassians.

Lastly, the artillery was taken into consideration; for, though it was well worked during the war, the Servian guns were found to be too small to be of much use. This deficiency was also partially remedied. Two batteries of mitrailleuses and two batteries of heavy guns arrived from Moscow, and were despatched to Deligrad, where they were worked by Russian artillerymen. A heavy battery was also sent off to the Ibar army, in charge of two Russian officers.

The Russian Lieutenant Mussin Puschkin, a relation of the celebrated Russian poet Puschkin, who had greatly distinguished himself by blowing up a bridge which had been thrown over the Morava by the Turks, received his appointment as a captain in reward for his services, and was also appointed commandant of the sotnia of Cossacks, who formed the prince's body-guard at head-quarters. At the same time, Count Lewackoff received the command of the cavalry in the Drina army. Very large quantities of ammunition were sent through Roumania. Even during the formal suspension of hostilities, twelve cases of swords and 22,000 muskets were sent in the same way.

Thus reinforced, the Russo-Servian leaders thought themselves sufficiently prepared to renew the conflict; and when the first week of the suspension of hostilities had terminated (on the 25th of September), hostilities recommenced on the Morava Valley on the next day, by a general attack on the part of General Tchernaieff's army. There was considerable slaughter; but on the 29th the Turks resumed the offensive, and there was heavy fighting on both occasions; but both parties retained all their fortified positions, so that the only result of these consecutive engagements was a large and wanton loss of life on both sides.

The attacks, on the 28th, of the Servians and their Russian allies were prosecuted with unusual resolution, Horvatovich commanded the Servian forces. His right wing, which was opposed to the Turkish right rear, defended by the division of Adyl Pasha, was led by Tcholak Antich; and his left wing, opposed to the division of Suleyman Pasha, and more directly to the brigade of Hafiz Pasha, was led by Strikovich. General Tchernaieff himself visited the ground the previous day on each occasion, but returned to Deligrad before the advance commenced.

The ground over which the Servians made their attack was the same precisely (distant four miles from the original Turkish position on the heights) as that on which they had themselves made their last stand in the battle of the 1st of September. Then the combatants on both sides had ceased to be supported by their artillery respectively; now the superior *élan* of the Turks was effectually seconded by the well-sustained fire of their batteries on commanding positions; whilst a counter-demonstration made by the Turks in the plain between Alexinatz and the trestle-bridge, more than answered its purpose in recalling to their lines the four Servian battalions, with twelve guns, which had been pushed forward on the high road. The Turkish force, consisting of three battalions, six guns, and 1,000 horse, had reached the river, and were on the point of crossing it, with the certain prospect of seizing the Servian batteries in the plain, as well as the batteries covering Alexinatz, which were almost denuded of their garrisons, when Ahmed Eyoub Pasha stopped the movement.

His motive for foregoing his advantage was the same as that alleged by him for abandoning the crest which had been wrested from the enemy once before—viz., deference to the orders of the Porte against assuming the offensive; though by his generals it was attributed to the want of enterprise and excess of caution, which had already deprived him of the fruits of his victories.

In a false attack along the right bank of the Morava during the battle, some Servian troops, having incautiously passed over the stream, were very severely handled by the Turkish detachments, consisting largely of cavalry, which had been posted under cover to watch them; the number of Servians killed and abandoned on the ground exceeding 300 men.

Thus, in spite of all that Tchernaieff and his colleagues could do, the Servians steadily lost ground; and at last the Turkish commander decided to pay no more attention to politics, but to endeavour to seize the Servian stronghold. Broadly speaking, the Servian lines still reached from Alexinatz to Deligrad, with strong works and outposts in front of Djunis. Alexinatz, as already said, could not be taken from the east, west, or south, without extensive mining and siege operations. The position at Deligrad could, however, be turned by the capture of Djunis and the repulse of the Servians across the Morava. This done, Deligrad could be taken in the rear. To obtain this object, Ahmed Eyoub Pasha gave the order to advance.

The attack commenced at daylight on the morning of the 19th instant, by a general advance of the Turkish brigades which had hitherto faced the Servian position in the Turkish rear, when considering the Turkish army as facing Alexinatz, but which, from the change of the point of attack from Alexinatz to Djunis, really formed the Turkish front line; and so completely was the enemy taken by surprise, that his advanced defences, consisting of numerous well-constructed batteries and redoubts, which constituted the main strength of his position, were successively abandoned after a feeble struggle. So persistent was the assault of the Turkish forces, that before 3 P.M. they had carried the whole range of heights opposed to them, except only the crest of a long spur on the right, running down towards the river, where the Servians maintained their defence until night put an end to offensive operations. The occupation of this crest, defended as it was by a redoubt, and commanded by a battery on the adjoining range, being essential to a further advance, the whole of the following day (20th) was spent by the right brigade in the attempt to carry it; but by this time, the Servians having obtained reinforcements, the repeated efforts of the Turkish troops were unavailing. Nevertheless, the progress made by them both along the ridge and on its southern slope having rendered it untenable against a further attack in the morning, and the Turks continuing to hold the ground they had gained, it was abandoned by the Servians during the night.

On the 21st, the general attack was resumed with scarcely more opposition than on the 19th. The Servians were supported only during the later part of the day by the artillery of the distant batteries on their last line of heights on the northern side of the valley of the Djuniska, and the Turks only by the mountain guns attached to their several brigades. The result was, that the Servians were completely driven off the intermediate spurs and crests up to the base of the said line, and left the large villages of Kavnik and Veliki Siljegovatz, beside other minor villages, at the mercy of the Turks.

Owing to the character of the country, which consisted of successive ranges of heights, varying from 300 to 500 feet, covered with forest trees, the inferior Servian troops were enabled to offer a more protracted resistance than without such shelter could certainly have been expected of them; for wherever open spaces afforded a glimpse of the combat, their retirement before the Turks bore rather the appearance of a stampede than a regular retreat. As usual, the Servians succeeded, by their rapid movements, in carrying off all their guns, which, after these had been withdrawn from the shelter of the batteries, were not again employed; nor, indeed, did the nature of the ground admit of their being easily brought into action. The advanced redoubts were protected by mines at a distance of about 200 yards on the line of approach, which was here further defended by *chevaux de frise* and felled trees. The road also was mined between Kavnik and Siljegovatz; but, owing to want of time or to miscalculation, these mines were not sprung at all, or exploded inopportunely, the wires connecting them with the electric batteries, in the former case, being afterwards discovered and cut by the Turks.

The principal feature of the battle undoubtedly consisted in the advance of the right and centre divisions of the Turkish line of attack, along the two crests leading to the superior heights, which formed the main and last position of the Servians on the left side of the valley of the Morava, overhanging Deligrad. These crests were fortified by three batteries and numerous intrenchments, and might be regarded as the outworks of the *enciente* behind. On the crest to the right, while the Turks were employed in climbing the slopes, the Servians were enabled to deliver their fire almost unmolested; but no sooner had the former approached within a distance of 200 yards, than the latter abandoned their intrenchments with the utmost precipitation, and, in lieu of retiring to their main works, they fled down the opposite slopes, and across the plain, on their way to the bridges over the Morava. For once, Nedjib Pasha, chief of the Turkish staff, who commanded this division (for the day), brought up his guns to support the attack of his infantry, and so materially contributed to the result above described. The further advance of the two right divisions was characterised throughout by the same cowardice of the Servians. Their retreat was a stampede, and, before 2 P.M., they had abandoned the whole of their works, with eleven guns (seven field and four mountain guns) into the hands of the Turks. The left and left-centre divisions having to recover the ground from which they had withdrawn on the night of the 21st instant, and also to traverse a considerable tract of wooded country to the left of the valley of the Djuniska before they could gain the base of the Servians' position, had scarcely reached the parallel of Djunis on the heights beyond, when the success of the right division put an end to the contest, and, by cutting off the retreat of the Servian right towards Deligrad, necessarily compelled it to fall back precipitately upon Krusevatz by the only road left open to it. The Servian loss was chiefly inflicted by the fire to which they were exposed during their retreat from post to post. A very considerable number also fell under the sabres of cavalry posted in the valley of the Djuniska to intercept their flight. The loss of the Turks was estimated at between 30 and 40 killed, and 300 wounded only. The attacking force was between 15,000 and 18,000 strong, including the reserves. The Serbs had the same number of men, but lost four times as many as the Turks.

Thus, by October 30th, the Turks had succeeded, with immense dash and valour, in carrying the strongest positions, and held all the country between the valleys of the Morava and the Djuniska, as well as the heights commanding the high road to Krusevatz. Of course, the line having been turned, Alexinatz was abandoned by the Servians, and occupied the same day by the Turks. Tchernaieff fell back with all his troops upon Deligrad—the last stronghold—and, from a military point of view,

there was nothing to prevent the Turks from marching to Belgrade.

But at this moment the Czar stepped in. Official Russia came to support unofficial Russia when it found unofficial Russia getting the worst of it. The "Divine Figure of the North," though absorbed in the contemplation of the evanescence of even imperial flesh, judged it opportune to throw off at least part of his mask. On October 30th, Lord Loftus received a note from Prince Gortschakoff, to inform him that the emperor was unable to receive him that day, in consequence of its being the anniversary of the death of the late empress.

Lord Loftus had met Prince Gortschakoff the same day, and inquired whether his highness had received any satisfactory intelligence from Constantinople. His highness replied that he had intelligence to communicate, but he preferred that the emperor should communicate it to him at an audience, which was then fixed for the 30th. However, Lord Loftus received later from St. Petersburg the official declaration published in the *Journal de St. Pétersbourg*, announcing that General Ignatieff had been instructed to declare to the Sublime Porte, that if, within a delay of two days, it did not accept an armistice of six weeks or two months, and if it did not give immediate orders to arrest military operations, the ambassador would leave Constantinople with all the members of the embassy, and that diplomatic relations would be broken off. This was the intelligence which Prince Gortschakoff preferred should be communicated to Lord Loftus directly by the emperor!

The Sultan, Abdul Hamid, who had succeeded his brother Murad, deposed on account of his "madness," acceded to General Ignatieff's demands without more ado, and agreed to a five months' armistice.

Thus, for the second time, the Turks were balked of the fruits of their victory by Muscovite diplomacy. The Servian war was thus at an end. Beaten at all points, Tchernaieff, Russians, and Servians were obliged to abandon force and arms, and resort to their more accustomed weapons—the pen and falsehood.

CHAPTER X.

LIVADIA.

Good faith, truth and honesty, as has been seen, have not characterised Russian diplomacy since—let us say—1870. There was, however, a popular idea that there was one man in Russia whose word was as good as his bond, whose honour was untarnished, who was the essence of integrity, nobility, generosity, and all the other virtues combined. His only fault was, that he was the Czar of all the Russias, and even that was his misfortune rather than his fault. It was with this model of all the virtues, that one bleak, cold day in November, on the 2nd, Lord Loftus had a special interview at Livadia, when his majesty was pleased to receive the British ambassador "with his customary kindness and cordiality." After some gracious inquiries after his lordship's family, the Czar at once opened on the Eastern question, and stated that he had that morning received a telegram from Constantinople, announcing the probable acceptance of the armistice, and another telegram reporting that orders had already been sent by the Porte to their commanders to suspend military operations. This, the Czar observed, was very satisfactory.

On Lord Loftus observing on the sudden change which had taken place between the Sunday, when he had seen the chancellor, and the following day, when the *ultimatum* was despatched to General Ignatieff, the Czar said that this had been caused by the intelligence he had received of the complete discomfiture of the Servian army, and his fear that it might be followed by similar atrocities as those which had occurred in Bulgaria. He had, therefore, decided on addressing an *ultimatum* in order to prevent a further unnecessary effusion of blood; and he observed that

no one was more astonished to receive this instruction than General Ignatieff himself.

This is worthy of especial note. By the word of the Czar himself, those are convicted of falsehood or culpable ignorance, who contend that General Ignatieff had overstepped his instructions, and was responsible for the subsequent complications.

The bare idea, however, of any Russian statesman or general overstepping his orders, or acting in any way on his own unsupported responsibility, whether an Ignatieff, or a Kauffman, or a Schouvaloff, is too ridiculous to be entertained for one moment. Serfage, amongst the nobility or peasantry, may have been theoretically abolished; practically, it flourishes as much as ever.

The emperor then expressed very earnestly his wish that a conference should meet with the least delay, and that instructions should be immediately sent by the several governments to enable the ambassadors at Constantinople to deliberate at once on the necessary preliminaries of peace between Servia and Turkey, taking as the basis the proposals which had been submitted by Lord Derby. Continuing in this strain, the emperor entered on a retrospective view of the past negotiations. He stated that he had given every proof of his desire for peace, and that he had done everything in his power to aid in arriving at a pacific solution of the existing complications. He even pretended that he had supported Lord Derby's previous demand for an armistice of six weeks, which was refused by the Porte, and was followed by a mere suspension of hostilities for ten days, which proved wholly illusory. This was true; but the emperor did not state that it was illusory on account of the bad faith of the Servians and their Russian accomplices! On the contrary, his majesty considered that this refusal of the Porte to a collective appeal of Europe was a "slap in the face" given to the powers. He had patiently submitted from a wish not to separate from the European concert, and had assented to the proposals to serve as a basis for peace proposed by Lord Derby, and which had been equally agreed to by the other powers.

To these proposals, however, the Porte had replied evasively, declining to convey its acceptance in the form of a protocol, and notifying that a wholesale measure of reform was under consideration, which would be applied indiscriminately to the empire at large, and which even went beyond the demands of the powers. The Czar then observed that, on this refusal, Lord Derby had, simultaneously with a similar proposal from himself, addressed to the Porte a demand for an armistice of not less than a month, for the purpose of enabling the powers to deliberate on the conditions of peace. He had supported this demand in conjunction with the other powers; and to this the Porte had replied by a counter-proposal, offering an armistice of five months, which, under the circumstances, and for the reasons given by his government, could not be supported or recommended to the belligerent parties.

"Thus," said the Czar, "the Porte, by a series of manœuvres, had rendered ineffectual all the attempts of collective Europe for arresting the war, and for securing a general pacification; and that if Europe was willing to receive these repeated rebuffs from the Porte, he could no longer consider it as consistent either with the honour, the dignity, or the interests of Russia."

At the same time, the Czar pretended to be anxious not to separate from the European concert; but the present state of things was intolerable, and could no longer be allowed to continue; and unless Europe was prepared to act with firmness and energy, he should be obliged to act alone.

At this point the Czar referred more especially to his relations with England. He said he regretted to see that there still existed in England an "inveterate" suspicion of Russian policy, and a continual fear of Russian aggression and conquest. He had on several occasions given the most solemn assurances that he desired no conquest; that he aimed at no aggrandisement, and that he had not the smallest wish or intention to be possessed of Constantinople. All that had been said or written about a will of Peter the Great and the aims of Catherine the Second were illusions and phantoms; they never existed in reality, and he considered that the acquisition of Constantinople would be a misfortune for Russia. There was no question of it, nor had it ever been entertained by his late father, who had given a proof of it in 1828, when his victorious army was within four days' march of the Turkish capital. But he carefully abstained from saying that the state of the Russian army

at that time was such that Constantinople was very much to them what the sour grapes were to the fox.

However, to avoid all further misapprehension, the Czar "pledged his sacred word of honour, in the most earnest and solemn manner, that he had no intention of acquiring Constantinople, and that if necessity should oblige him to occupy a portion of Bulgaria, it would only be provisionally, and until peace and the safety of the Christian population were secured."

Continuing the line of argument, the emperor then reverted to the proposal addressed to her majesty's government for the occupation of Bosnia by Austria, of Bulgaria by Russia, and of a naval demonstration at Constantinople, where, he said, her majesty's fleet would have been the dominant power. This, the emperor thought, ought to be a sufficient proof that Russia entertained no intention of occupying that capital. True it might have been, had it been understood where Bulgaria began, and where it left off. But, as subsequent events proved, Russia looked upon Turkey as nearly all of it Bulgarian!

However, the Czar said that he could not understand, when both countries had a common object—namely, the maintenance of peace and the amelioration of the condition of the Christians, and when he had given every proof that he had no desire for conquest or aggrandisement—why there should not be a perfect understanding between England and Russia—an understanding based on a policy of peace, which would be equally beneficial to their mutual interests, and to those of Europe at large.

"Intentions," he said, "are attributed to Russia of a future conquest of India and of the possession of Constantinople. Can anything be more absurd? With regard to the former it is a perfect impossibility; and, as regards the latter, I repeat again the most solemn assurances that I entertain neither the wish nor the intention." He might have added, "nor the power."

Then, reverting to his relations with England, he deeply deplored the distrust of his policy which was manifested in England, and the evil effects it produced; and he earnestly requested Lord Loftus to do his utmost to dispel this cloud of suspicion and distrust of Russia, and charged him to convey to her majesty's government the solemn assurances he had repeated to him.

Lord Loftus assured the emperor that her majesty's government were perfectly cognizant of, and fully appreciated, the Czar's pacific intentions. He observed that the proposed occupation of the Turkish territory had worked a change in the public opinion of England, and had produced alarm.

Lord Loftus then expressed a hope that the acceptance of the armistice would enable the powers to bring about a satisfactory pacification, and that it was of essential importance that the European concert should be maintained. At the same time, he remarked that the question of autonomy appeared to him as likely to offer the chief difficulty; and that as it more directly affected Austrian interests, care should be taken not to exceed those limits which could be accepted by Austria. Continuing in this strain, Lord Loftus then referred to the reported pretensions of Servia and Roumania to be erected into independent kingdoms. Such a measure, Lord Loftus remarked, would be the first step towards a dissolution of the Turkish empire in Europe. History, he somewhat maliciously remarked, recorded the existence, in former times, of a kingdom of Bohemia, a kingdom of Servia, and a kingdom of Poland: they had all disappeared, and their dissolution had been chiefly caused by internal dissensions. If the pretensions of Servia and Roumania should be now admitted, it would be the creation of so many small Polands, which very probably would drift into republics—a state of affairs which would not conduce either to the peace or security of the neighbouring States.

Hereupon the emperor said that there was no question of establishing kingdoms of Servia and Roumania, and that it would be a folly to do so. As for the proclamation of Prince Milan, as King of Servia, by the Servian army, at the instigation of General Tchernaieff, the emperor thoroughly disapproved of it, and that, in consequence, he had advised the prince not to visit the head-quarters.

Lord Loftus, however, was not surprised to hear that the Czar had received a telegram from the prince, excusing himself for not obeying his majesty's advice, on the grounds that "duty to his country obliged him to go to his army under the present adverse circumstances."

The Czar then made a passing allusion to the exaggerated reports as to the number of Russian volunteers in the Servian ranks; to which Lord Loftus replied by

observing that the presence of these men had been very instrumental in producing the feverish excitement in Russia.

To this the Czar replied that he had *permitted the officers to go, provided they left the Russian service*, "and that he had hoped by so doing to calm the agitation (*de jeter de l'eau froide*)." But, continued his majesty, a great many Russian officers had fallen, and the enthusiasm for the Servians had also very much calmed down.

The emperor then summed up his observations under three heads:—

1. The armistice.
2. The immediate meeting of a conference to decide upon the reforms to be introduced into Turkey.
3. That the Porte should give effective guarantees for the execution of these reforms.

These personal expressions of opinions, views, intentions, and principles were followed up by a despatch from Prince Gortschakoff to Count Schouvaloff; in which, to save time—for every minute is wasted that is spent upon the document—we interpolate our glosses in parentheses. He wrote:—

"I see with profound surprise, by your last letter, that ideas of our coveting Constantinople and of the will of Peter the Great continue to haunt the minds of some people in England. I confess I thought these absurdities were out of date, and had been dismissed, together with the conquest of India by Russia, to the domain of political mythology." (Unfortunately, these absurdities are nowhere more believed in than in Russia.)

"How often have not the Russian emperors publicly asserted that no territorial annexation enters into their policy (quite true—hundreds of times; and they kept their word by annexing Poland, the Caucasus, Khiva, Khokand, and parts of Persia); that they would be much embarrassed by it (also true; for instance, in Poland in 1832 and-'63; in the Caucasus and in Georgia); and that the maintenance of the *status quo* of the East was the best combination (against Russia). In our form of government, the word of the sovereign is not, like a parliamentary declaration, revocable at the will of a majority (which is to be deeply deplored). Their personal loyalty (which is worth nothing) is at stake. How many times, moreover, have not facts confirmed this! (Innumerable times, as above.) If Russia had these desires she would do what annexing powers do. She would quietly make her preparations, and act on the first favourable occasion. (Yes; but other powers do not hypocritically proclaim to the world that they have "no intentions," and "pledge sacred words of honour" they have not!) Had she not such an opportunity in 1829, in 1848, and 1870, when the attention and the forces of Europe were engaged elsewhere? (No; she had not. In 1829, it was a case of sour grapes; in 1848 she had enough to do at home; in 1870 she entered into a bargain with Prussia, and took what she could get—*i.e.*, the abrogation of the Black Sea treaty. She could do no more, for she had Austria, and would have had England and Turkey against her.) What proofs, then, is it necessary to give English ministers of a disinterestedness, founded, not on political virtue (of course not!), but on reason and good sense. If they would just forget for one moment that they are English (which they certainly will not do), and place themselves at a Russian point of view (which is impossible), we would ask them whether, conscientiously, they would advise the imperial government to seek the possession of Constantinople. (Decidedly they would if the Russian government could get it and keep it! It is notorious that Constantinople is coveted by all who have interests in the East. Its possession would be invaluable to Russia.) There can be no doubt as to the reply. Why deny us the practical good sense they themselves have? (As we have shown, they do not.)

"The only rational combination for Russian interests is to leave the keys of the Black Sea in hands feeble enough not to close to Russia that commercial outlet, nor to menace her security. The Turkish rule fulfilled this programme. Is it our fault if the Turks have taken advantage of it to render their sway intolerable to their Christian subjects? (Yes, decidedly.) Has not the English policy contributed to the abuse by exciting the suspicions of the Porte against Russia through her own rivalry, and in assisting her to make force the sole basis of her power? (No; it is false.)

"It is really painful to see two great States, which together (if their principles were at all similar!) might regulate European questions for their mutual advantage and the benefit of all, excite themselves and the world by an antagonism founded on prejudices or misunderstanding. (Say, justified distrust.)

"The results are obvious. English public opinion itself has been aroused (it always is against tyranny and barbarity); and much more so, and more naturally, the national and Christian sentiment of Russia (as exemplified by the persecution of the Uvicts!); for we are too near to these countries, and have too many relations with them, to confine ourselves to merely theoretical sympathies. (Very true; Tchernaieff.)

"This imposes on the emperor duties from which his majesty cannot shrink. (On the contrary!) But these duties are shared by all civilised Europe. What prevents England from fulfilling her part by joining with us for the protection of the Christians, and sharing with us their gratitude and sympathy? (Because England does not believe in Russian civilisation or good faith.) The Eastern question is not only a Russian question: it involves the repose of Europe, peace and general prosperity, humanity and Christian civilisation. (Just for that reason England refuses to leave it to Russia.)

"Surely the space is large enough for England to place herself side by side with Russia? (It is not; not as long as Russia is what she is.) Have we not invited her there (where?) by inviting in the Straits the presence of her squadrons? (By what right does Russia invite England into Turkey? One man does not invite his friend to another man's house without his permission.) What further pledge are we to give of our having no pretension to the exclusive possession of Constantinople? (By not going there!)

"The emperor has just expressed himself in this sense to Lord A. Loftus with the precision and loyalty of his sovereign words. (Pie-crust to wise men; and caviare to the multitude!) The English ambassador will most certainly report them.

"If this assurance requires to be repeated, do so, my dear count, in the most emphatic terms. You will be certain to interpret faithfully the intentions of our august master." (That is much to be doubted.)

These assurances made by the Czar at Livadia, and repeated to Count Schouvaloff in London by Prince Gortschakoff, were of course hailed by the peace-at-any-price party as eminently satisfactory; and, owing to diplomatic usage, they had to be accepted—at least for what they were worth.

But the Russian after-thought was not long in making its appearance. The British government made the following proposals for the basis on which to call a conference at Constantinople:—

"1. The independence and territorial integrity of the Ottoman empire.

"2. A declaration that the powers do not seek for territorial advantages, exclusive influence, or commercial concessions, as in the protocols of Sept. 17, 1840, and of August, 1860.

"3. The terms proposed to the Porte by Sir Henry Elliot in accordance with the Earl of Derby's instructions of September 21st, 1876."

Prince Gortschakoff at once objected to the words "territorial integrity." He stated that the imperial government could not accept that term, as it would exclude the possibility of a provisional occupation, which, in the interest of the Ottoman empire itself, he considered would still be necessary for the security of the Christian population, and for the maintenance of peace and order during the introduction of the administrative reforms. He added, that there was still great agitation in Bulgaria as well as in Bosnia, and that excesses, with loss of life, were still being perpetrated, and that nothing but material force would restore peace and tranquillity. But, he repeated, there was no question of disturbing the integrity of the empire. He stated most positively that Russia did not covet an inch of Turkish territory. If an occupation became necessary, it would be provisional, and would only continue until the administration was placed on a regular and peaceable footing. Ultimately, however, and on considering that one quibble more or less was of no importance, he yielded, and accepted the invitation.

A few days later, on Nov. 15, the emperor held a review of the imperial guards and of the adjacent garrisons in the Champ de Mars. On the termination of it, his majesty addressed the Grand Duke Nicholas Nicolaievich, his staff, and the officer of his guard, and referring to the mobilisation of a portion of his army, expressed a hope that it would not be necessary to mobilise his guards. He expressed his thanks to the Grand Duke Nicholas for the efficient state of the guards, and announced the appointment of his imperial highness to command the active army; adding, that his imperial highness carried with him the best wishes

of all for his success. This speech was received by the troops, and a vast concourse of eager spectators who were present at the review, with the greatest enthusiasm and delight.

Two days later, the Czar gave orders for the immediate mobilisation of 160,000 men and 648 guns. Thus, whatever the peace-at-any-price party may think of Lord Beaconsfield mobilising one army corps to go into congress with, the world in general will remember that Russia set the example when she mobilised six to go into conference with!

CHAPTER XI.

THE CONSTANTINOPLE CONFERENCE.

NEVER was a conference intended to lead to peace—at least ostensibly intended to restore peace—ushered in with such remarkable demonstrations as the Constantinople conference of 1876-'77. The Russians, as we have seen, prepared for peace by arming to the teeth; Servia was in a state between peace and war; Montenegro was in a state of inactive but open hostility against the Porte; and the Turks themselves were quietly but steadily preparing for what every one, who had any intimate acquaintance with the question, knew would be the result.

But to this political chaos the powers sent their representatives.—Turkey was represented by Safvet Pasha and Edhem Pasha, the former of whom occupied the position of president, the conference being held in the Turkish capital. The French delegates were Comte François de Bourgoing, the resident ambassador, and the Comte de Chaudordy. Germany had but one representative, Baron Werther. Austria sent Count Zichy, the resident ambassador, and Baron Calice, consul-general in Roumania; Count Corti represented Italy, and General Ignatieff was deputed by Russia; whilst the representatives of Great Britain were Lord Salisbury and Sir Henry Elliot.

These gentlemen were accompanied by a numerous suite of *attachés* and secretaries, amongst whom, as is the custom of the species, there was much delight at the prospect of a visit to Constantinople. Mr. Philip Currie was appointed secretary to Lord Salisbury's "Special Embassy," although he was already Lord Salisbury's secretary, and, as such, in receipt of a handsome salary. Besides Mr. Currie, Mr. Henry S. Northcote, a pleasant-faced, good-natured boy, Mr. H. A. Lee, and Mr. J. H. C. Hozier, were also appointed to assist in settling the ever-momentous Eastern question, and to look after the luggage—of course by proxy.

This was very satisfactory indeed to all these gentlemen, when it suddenly struck somebody that a journey zig-zag through Europe, from London to Constantinople, would probably cost a good deal of money. The young gentlemen drew rather long faces at this, and hints were made to their "chiefs" that a holiday without pocket-money could scarcely be regarded as an unmixed pleasure. The scion of the House of Cecil and the daughter of the Aldersons agreed with this view; but they also agreed that the House of Cecil could not be expected to furnish this necessary pocket-money; and as the voyage was to be undertaken for the nation's weal, it was but just that the nation should pay for it. Even Lord Derby saw the force of this argument, and on November 20th, after he had made the appointment of these gentlemen in a letter to the Marquis of Salisbury, he indited a second, to the effect that all the "travelling and other expenses" of the journey and stay in Constantinople should be paid by the public. This was eminently satisfactory, and the young gentlemen were highly delighted, and set about arranging their outfit. Their colleagues greatly envied them, and one of them—Mr. Marwood Tucker—gave expression to his discontent, and lamented that he, too, had not been included in the holiday party; and as Mr. Marwood Tucker was much

liked by his friends, pressure was brought to bear upon the Marquis of Salisbury, to whom it was represented that too much work would seriously diminish the pleasure of a holiday trip, even with unlimited pocket-money, and that Mr. Marwood Tucker, mindful of his friends' comfort, would be very glad to assist in the work to be done. The soft-hearted marquis agreed, and proposed Mr. Marwood Tucker as an additional private secretary. To this Lord Derby assented; but the value of his consent was much diminished by his statement that Mr. Marwood Tucker, though he would be considered as attached to the embassy, would receive no remuneration, and that his expenses would not be borne by the public. This was not satisfactory to the noble marquis at all; still less satisfaction was there at the receipt of a reminder from Lord Derby, that, as there was such a large staff, it was but fair that some work should be done, and that they should address to him (Lord Derby) a series of despatches, properly numbered and docketed, during the course of the mission. Mr. Marwood Tucker, however, had gained his point. It is true, some bilious critics aver that Mr. Marwood Tucker was appointed to do all the work, and take it off his colleagues' hands, and that it was on that understanding that he was allowed to form one of the party. But that may be as it may; we have only to deal with facts; and these facts, as they appear in the Blue-Book in their native simplicity, will be found to run as follows:—

No. 3.

The Earl of Derby to the Marquis of Salisbury.

"Foreign Office, November 20, 1876.

"My Lord,—I have to inform your Excellency that the Queen has been pleased to signify her commands that Mr. Philip Currie, of this Office, should be appointed secretary to your Excellency's special embassy, and that Mr. H. S. Northcote, Mr. H. A. Lee, and Mr. J. H. C. Hozier, of this Office, should be officially attached to your Excellency in your character of special ambassador. Your Excellency will accordingly consider these gentlemen as forming part of your diplomatic establishment, and you will employ them in the business of the embassy in whatever way you may deem most beneficial for her majesty's service.

"I am, &c.,
(Signed) "DERBY."

No. 4.

The Earl of Derby to the Marquis of Salisbury.

"Foreign Office, November 20, 1876.

"My Lord,—I have to inform your Excellency that the travelling and other expenses of your Excellency's embassy will be paid by the public, and that Mr. Currie has been instructed to keep and render the accounts in accordance with the usual forms.

"I am, &c.,
(Signed) "DERBY."

No. 5.

The Earl of Derby to the Marquis of Salisbury.

"Foreign Office, November 20, 1876.

"My Lord,—I have to inform your Excellency that Mr. Marwood Tucker has been appointed additional private secretary to your Excellency in your character of special ambassador about to proceed to Constantinople. Mr. Tucker will be considered as attached to the embassy, but he will receive no remuneration, and his expenses will not be borne by the public.

"I am, &c.,
(Signed) "DERBY."

No. 6.

The Earl of Derby to the Marquis of Salisbury.

"Foreign Office, November 20, 1876.

"My Lord,—I have to request your Excellency to correspond with this Office, while employed on the service of your special embassy, in a series of despatches, numbered and docketed, and addressed to her majesty's Secretary of State for Foreign Affairs.

"I am, &c.,
(Signed) "DERBY."

Everything being thus satisfactorily settled, and a proposal by Mr. Thomas Cook to "personally conduct" the party declined with thanks, the excursion left England on November 20th, after Lord Salisbury had received his instructions in a lengthy document, of which the following was the gist:—

"1. The independence and the territorial integrity of the Ottoman empire.

"2. A declaration that the powers do not intend to seek for, and will not seek for, any territorial advantage, any exclusive influence, or any concession with regard to the commerce of their subjects which those of every other nation may not equally obtain.

"Such a declaration was made on the 17th of September, 1840, in the protocol for the pacification of the Levant; and again on the 3rd of August, 1860, in regard to the pacification of Syria.

"3. The basis of pacification proposed to the Porte on the 25th of September, viz.:—

"(*a.*) The *status quo*, speaking roughly, both as regards Servia and Montenegro.

"(*b.*) That the Porte should simultaneously undertake, in a protocol to be signed at Constantinople with the representatives of the mediating powers, to grant to Bosnia and Herzegovina a system of local or administrative autonomy, by which is to be understood a system of local institutions which shall give the population some control over their own local affairs, and guarantees against the exercise of arbitrary authority. There is to be no question of a tributary State.

"Guarantees of a similar kind to be also provided against maladministration in Bulgaria."

Admirable as were these demands, they lost much of their value from the absence of any provision to enforce their execution upon the Porte, which had promised to fulfil such and similar demands time after time. But no material guarantees were to be exacted from the Porte; and thus the whole document, as set up by Lord Derby, could not be seriously considered as more than a comedy, except under one condition. That condition was the supposition that the government intended, and determined to insist on the independence and territorial integrity of the Turkish empire. That was a policy intelligible to all. It does not signify what the value of that policy was, nor how it would be regarded by a portion of the public. It was at any rate a clear and definite programme; and coming from a Conservative ministry, whose "platform" was the sanctity of treaties and the re-establishment of British influence abroad, it was but natural to believe that it was a programme which would be carried out to the letter, as far as lay in the country's power.

Lord Derby, however, as well, it must be presumed, as the rest of the cabinet, judged it advisable that the Marquis of Salisbury should take the sense of the great powers on this programme before entering the conference. Thus it was decided that he should call, on his way to Constantinople, on the French, German, and Austrian ministers and their masters. Thus there ensued that remarkable journey which created so much hilarity on the continent. The spectacle of a British minister knocking at the doors of all the chief cabinets in order to ascertain the opinion entertained of the British programme was unprecedented. And it was as senseless as it was undignified. For, supposing that the governments, especially those belonging to the Triple Alliance, should demur to the policy advocated by the British government, there would have been but little use in proposing the conference.

However, Lord Salisbury arrived safely in Paris on the 20th of November, and had an interview with the Duc Decazes and Marshal MacMahon on the following day. At this interview the British programme was generally approved of; but stipulations were made, that, at the conference, no mention should be made of Egypt or Syria, and that no proposals touching these countries should be discussed. At the same time, the Duc Decazes asked the marquis what course the British government would adopt in case the Porte refused to comply with the demands which the conference might judge fit to make.

To this question, as we are able to state on special information, Lord Salisbury replied, that the British government would not be prepared to adopt any coercive measures whatever towards the Porte, and would confine itself to a declaration that the Porte, in such case, could not expect any assistance whatever from Great Britain. "*Bon; je comprends!*" replied the duke. "I understand!"

The same night, the marquis left Paris

en route for Berlin; and on November 23rd, he had an audience of the Emperor William, after he had several interviews with Prince Bismarck and other persons of note. The emperor expressed earnest hopes for the preservation of peace, and said that he had used, and would continue to use, his utmost personal influence with the Emperor of Russia for that purpose; but he could not but acknowledge that the course taken by the Emperor Alexander was imposed upon him by circumstances, and by the oppression to which those of his own religion had been subjected under Turkish rule. He trusted, however, that by the concession of reasonable reforms in the administration of the Turkish provinces, *combined with guarantees for their execution*, the necessity for an occupation of Turkish territory might be avoided. At the same time, however, the emperor considered that it was impossible for Europe any longer to accept the mere promises of the Porte, and that it was *indispensable that satisfactory guarantees against the continuance of the evils under which the Christians in Turkey were suffering should be arranged.*

In reply, Lord Salisbury stated that it was the full intention of the British government to insist on the provision of adequate guarantees; but, at the same time, he said he feared that an occupation of Turkish territory would lead to war, and that the limits of such a war could not be foreseen.

Thus the marquis received a plain check from the old emperor. Unlike the Duc Decazes, he refused to "understand" that the conference should be allowed to end in a farce, and gave the marquis plainly to understand that he, for one, did not intend to support the British policy against his nephew's.

At Vienna the marquis was scarcely less unsuccessful, though, owing to the very nature of the case, he met with no such decided repulse as at Berlin. He found both the emperor and Count Andrassy on the horns of a dilemma, and unable to choose between them. In fact, they were neither of them clear in their own minds as to what they did want; all that they positively knew was that matters looked very gloomy; but, at the same time, it was sufficiently evident that Austria would have no objection to changes in the Turkish empire as long as those changes did not threaten Austria, and she were allowed to take compensation for them, though they might not prejudice her. At this Lord Salisbury became slightly uneasy, and, in reply to the emperor's remarks, that the difficulties in the way of a settlement were almost insuperable, he could only repeat the old stock-in-trade assurance, that peace could only be seriously menaced if an occupation of Turkish territory were insisted on.

What claim to statesmanship has an individual of the House of Cecil, or any other house, who could make such a statement as that at the end of the year 1876?

These were terrible blows to the noble marquis; but the most cruel blow of all awaited him in Rome. Here, although Signor Melegari objected to a Russian occupation of any portion of the Ottoman empire, he insisted that the action of the powers ought not to be derived from, or limited by the treaty of Paris, but that their functions were rather those of mediators, deriving their title simply from the events of the war and the acceptance of the conference by the Porte. They ought, he considered, to be unrestricted in their search for a solution of the questions to be submitted to the conference by any obligations imposed by that treaty, and he was *not prepared to admit that the Porte would be at liberty to reject any decision to which the conference might come.*

That is to say, even Signor Melegari was also of opinion that effective guarantees should be demanded from the Porte, and the decisions of the conference be enforced by the powers, should the Porte refuse to obey. Thus in Berlin, Vienna, and Rome, Lord Salisbury met with the same reply—that the British proposals were admirable in their way, but that no means had been provided to enforce their execution.

In short, the negotiations from which Lord Salisbury, and those who did not know the limited scope of his mind, expected so much, resulted in nothing. He was rebuffed on all sides, except in Paris, where, however, assistance of a practical nature could not be expected. And nowhere was the amusement at the noble lord's political peregrinations greater than at St. Petersburg and Constantinople, where he arrived with his suite on board the Austrian and Lloyd's steamer *Aurora* on December 5th.

Negotiations were first commenced in a

series of preliminary meetings, when, as was to be foreseen, the chief difficulty was the question of guarantee for the execution of the decisions which the conference might arrive at.

Two methods to achieve this end were proposed. The first was a combined naval demonstration by all the signatory powers before Constantinople; the second was the occupation of the revolted provinces by a foreign force belonging to some minor State. On this head, General Ignatieff, unconditionally dwelling upon the prevalence of insecurity and danger of massacre, stated that it was the immovable determination of his government to have some sufficient material force as security for the Christians during the introduction of the reforms, and for the commission which would have to be appointed to watch over the execution of the reforms. Russia would furnish this force if no other was forthcoming, but did not desire to do so. Thereupon Lord Salisbury stated that the British consuls did not believe in the danger; whereupon the ambassadors of each of the four other powers stated that the reports from their consuls were in the opposite sense. Beaten on this point, Lord Salisbury then urged upon the ambassadors that Turkish regular troops would be sufficient, and Sir H. Elliot pressed the point upon them. They objected, however, that the regulars took part in the massacres, and could not be trusted. The question of employing Roumanian troops was raised; but it was thought that this would be intolerable to the Porte, and their efficiency was doubtful. Besides that, Lord Salisbury stated that his instructions formally forbade him to accept any military occupation; that any employment of Russian soldiers was so likely to lead to bloodshed that it was absolutely out of the question; but that if the conference would accept English soldiers, he would recommend that solution.

To this the Russian ambassador took strong objection; and the German ambassador said that no troops belonging to guaranteeing powers could be accepted. At the same time all protested against the idea of occupation; but said that an escort of 3,000 to 5,000 men, as a nucleus for a *gendarmerie*, could not be considered an occupation.

A Belgian force of this size was then proposed, and it was stated that the proposal had the assent of the Belgian government; but to this solution Lord Salisbury objected, that he could give no opinion on the part of England, as such a suggestion had not been contemplated in his instructions. He, however, accepted it *ad referendum*, and recommended its adoption earnestly, because he did not believe that the conference would give way on this, and because no possible political danger could result from it, although the Turks would probably oppose; but as this objection would apply to all suggestions of reform, he craved a speedy answer from the government at home, as the further continuance of negotiations depended upon this point. In reply to Lord Salisbury's inquiries on the subject, Lord Derby informed him that the government were ready to assent in principle to the plan proposed by the preliminary conference—viz., local reforms, with a commission of supervision for one year, and such commission to be supported by an escort not exceeding 6,000 men at the utmost, to be drawn from some minor State, such as Belgium. But, at the same time, he said that the government would reserve absolutely the question of steps to be taken in the event of refusal by the Porte; and furthermore, he said, that it would be advisable to present the proposal as emanating from the Porte itself; and, also, that it should be accompanied by a withdrawal of the Russian forces concentrated on the frontier.

Interrogated the next day (Dec. 22), as to what measures were to be taken in case the Porte refused to comply with this demand, or the other decisions of the conference, Lord Derby roundly declared that the government would not assist in coercive measures, military or naval, against the Porte; and that, in case of the Porte's refusal, Lord Salisbury was simply to leave Constantinople, as well as Sir Henry Elliot, and inform the Porte that it could expect no assistance from Great Britain whatever.

From this declaration the Turks argued that England was resolved not to act against them; it would only be necessary for them to let things come to the worst, and a declaration of war, in order to secure the alliance of Great Britain as heretofore. Possibly, this assistance would not be given at once, but that it would be ultimately forthcoming they entertained no doubt whatever.

To nobody was this more evident than

to General Ignatieff. He was convinced that the Porte would refuse any series of concessions imposed upon them by the conference; and he knew that war would ensue in consequence. He also knew that the conditions to be imposed upon the Porte, after a successful war, would exceed in severity those proposed by the conference by a hundred-fold; and, consequently, knowing all this, he felt perfectly safe in making any concessions, on the part of Russia, which might be demanded by the conference.

He therefore yielded one point after another. So great were his concessions as to cause universal surprise. He even abandoned the idea of an occupation by Belgian or other troops to look after the execution of the reforms. But all was in vain. The Porte, strong in its conviction that it would not be abandoned by England, took little heed of the negotiations during the preliminary meetings, and, under Midhat Pasha, calmly set about framing a constitution after its own fashion.

This constitution, Midhat Pasha's pet project, was announced in a most dramatic manner. At the very first sitting of the conference, under the presidency of Safvet Pasha, the plenipotentiaries assembled were suddenly startled by repeated salvoes of artillery. Some of the plenipotentiaries turned pale; all looked inquiringly at each other, and then at Safvet Pasha, who, evidently enjoying the discomposure of the ambassadors, kept silence for a moment, and then declared that these salvoes announced the promulgation of the Ottoman constitution.

"A great act," he said, "which is at this moment being accomplished, has just changed a form of government which has lasted 600 years. The constitution with which his majesty the Sultan has endowed his empire is promulgated. It inaugurates a new era for the happiness and prosperity of his people."

Having somewhat recovered their composure, the ambassadors gave expression to their opinion on the matter, and Count Chaudordy pointed out that peace was absolutely necessary, in order that the constitution might produce the results expected of it, and that the agreement of all the powers in the conference was the essential condition for the efficacy of this solemn act. The Marquis of Salisbury was equally glad to record that the conference had met to secure peace, which Safvet Pasha declared was ardently desired by Turkey, with the object of realising as soon as possible the benefits of the constitution. To this General Ignatieff drily replied that the manner of application of the new institutions would be the real test of their value, and that, moreover, peace must be secured before they could be put into execution.

In order to attain this much-desired object, as he declared, General Ignatieff continued to make one concession after another until the proposals had reached a minimum, and were embodied in a protocol which was handed to the Porte for acceptance. It was divided into four heads, and contained the irreducible *ultimatum* of the six powers assembled in conference. It ran:—

Montenegro.

"The rectification of the frontiers of Montenegro, together with the annexation of the Baniani, Piva with Nichsich, Drobniak, a part of Goranzi, the district of Kolachin, the Kutchi-Drekalovitchi, the Kutchi-Kraïni, the Vassoïevitchi from the Zievna to the Lim, the Mali and Veli-Brdo, Spouz, and Jabliak.

"An international commission of delimitation *ad hoc*.

"Freedom of navigation, and the neutralisation of the forts on the Boyana."

Servia.

"*Status quo ante bellum* for Servia, together with the settlement of the difficulties concerning the boundaries on the Bosnian side by a commission of arbitration in conformity with the Hatti-Chérif of 1833.

"For the two principalities: Evacuation by the Ottoman troops and the troops of the principalities of the territories beyond certain fixed boundaries, exchange of prisoners of war, and amnesty to subjects in the service of the enemy."

Bosnia, Herzegovina, and Bulgaria.

"The governors-general of the provinces to be appointed for the first five years by the Porte, with the previous agreement ('agrément préalable') of the powers.

"The sub-division of the provinces into sandjaks, with Mutessarifs appointed by the Porte, on the nomination of the Valis,

for a fixed period, and into cantons (nahiés, mudirliks) of 5,000 to 10,000 inhabitants, with the cantonal authorities freely elected by the population in each commune, and competent to deal with all questions affecting the interests of the canton.

"Provincial assemblies, elected for a period of four years by the cantonal councils, in accordance with the system notified. They are to fix the budget and appoint the provincial administrative councils, which the Valis should consult in cases exceeding the pure and simple execution of the legal and administrative arrangements, and on which they may report to the Sublime Porte.

"Improvement in assessment of taxes: The provincial assemblies and the cantonal councils to have the apportionment and collection of the taxes, with the exception of the customs, the posts and telegraphs, the taxes on tobacco and spirits, and the 'régie.' The complete abolition of the system of tax-farming. Remission of arrears in taxes. The drawing up, every five years, of the budget of the provinces according to the average revenue. A part to be applied to paying off the public debt and to the requirements of the central government, and the remainder to those of the provinces.

"Readjustment of justice with a view to the greater independence of the magistracy; the appointment of judges of the civil and criminal courts by the Valis, with the consent of the administrative council, and of the members of the Court of Appeal by the Porte, upon the recommendation of the Valis. Sittings and judicial inquiries to be public. Exclusive jurisdiction for ecclesiastical authorities over special cases of different creeds.

"Entire religious liberty. Maintenance by the communities of the clergy and of public religious and educational establishments. Guarantees against forced conversions.

"The language of the country to be used on an equal footing with Turkish in the courts and administration.

"Complete prohibition of the employment of irregular troops. Formation of a Christian and Mussulman militia and police in proportion to the population, the subaltern officers to be appointed by the governors-general.

"Interdiction of colonisation by Circassians. A general amnesty to Christians sentenced for political offences.

"Improvement of the condition of the husbandmen and farmers in Bosnia and Herzegovina. Facilities for the acquisition of State land, and for the repatriation of emigrants.

"These regulations to come into force within a fixed period of three months."

Commissions of Control.

"Two commissions of control shall be named by the powers to watch over the execution of the regulations, and to aid the local authorities in different measures affecting order and public security, and they shall receive special instructions."

Now here was a fine opportunity for the Western powers to gain a signal diplomatic victory over the Russian government, by uniting to coerce the Porte into accepting these conditions, which represented the minimum which Europe demanded, and which, in themselves, were the least that the justice of the case demanded, and were, moreover, the least that could be expected from Turkey, even had Great Britain agreed to assist her in any war against Russia.

But the powers could not agree, and thus the opportunity to take Russia at her word when she proposed these minimised conditions passed away for ever. The Turks made a counter-proposal scarcely differing from one which had already been declared unacceptable by the powers, and this proposal was equally declined. The ambassadors decided to sign the above protocol, and fixed January 21st for the ceremony. On that day all the plenipotentiaries assembled at the Austrian embassy, except the Turkish delegates. They had promised to come, but did not, and did not even send an excuse for not keeping their promise.

In this contemptuous manner the Porte practically dismissed the conference; and on the following day, Lord Salisbury embarked in the Austrian Lloyd's steamer *Ceres*, to return to London *viâ* Athens and Brindisi.

The other ambassadors also left Constantinople; the embassies being left in charge of a secretary only; and thus diplomatic relations with the Porte were broken off as far as the representation of the powers at Constantinople was concerned.

CHAPTER XII.

THE PROTOCOL AND THE MANIFESTO.

THE Porte, having now got rid of the troublesome ambassadors, began to be anxious to conclude peace with Servia and Montenegro. Exhausted as Servia was by the recent war, and more or less in disgrace at St. Petersburg in consequence of her failure to obtain any successes against the Turks, there were no great obstacles in the way of coming to an arrangement, the more so as the terms accorded by the Porte were generous in the extreme, when all the facts of the case are taken into consideration. Peace was, therefore, concluded on the basis of the *status quo ante;* that is to say, of the relations between the Porte and the principality before the outbreak of the war which ended so disastrously for Servia.

With Montenegro, however, the case was different. Though the Turkish armies had traversed the country north and south, they had not been able to seize the capital, or to capture the Montenegrin armies; and, practically, the country was as unsubdued as ever. A tremendously mountainous country, a revolt there could only be suppressed by the occupation-force of the chief cities for an indefinite period, thus forcing the Montenegrin bands to keep to the mountain-passes and fastnesses; but to accomplish this, more troops were necessary than the object to be gained was worth. Advice was, of course, freely tendered to the prince by the powers; but Russia favoured his policy of procrastination and evasion, and supported him in his demands for independence to be formally recognised by the Porte. In fact, Prince Nikita was charged with the task of keeping the question open.

Under these circumstances, and the conference having come to nothing, Prince Gortschakoff addressed a circular to the powers, in which he stated, that, though the refusal opposed by the Porte to the wishes of Europe having involved the Eastern crisis in a new phase, he still considered the question as an European one, which should not and could not be solved but by the unanimous agreement of the great powers. As a matter of fact, all exclusive and personal considerations were disclaimed by all the cabinets, and the difficulty resolved itself into inducing the government of Turkey to govern the Christian subjects of the Sultan in a just and humane manner, so as not to expose Europe to permanent crises which were revolting to its conscience, and endangered its tranquillity.

It was, therefore, a question of common unanimity and interest, which the imperial cabinet was accordingly endeavouring to solve by bringing about an European concert. With this object Russia had come to an agreement with the Austro-Hungarian government, as the one most immediately interested, in order to submit to the European cabinets propositions which might serve as a basis for a general understanding and common action, and which, set forth in Count Andrassy's despatch of the $\frac{18}{30}$th December, 1875, had obtained the adhesion of all the great powers, and also of the Porte. The want of executive sanction having, however, rendered this agreement abortive, the cabinets, with the exception of the British cabinet, were placed, by the Berlin memorandum, in a position to pronounce on the principle of an eventual concert, having in view more effectual measures for realising their mutual aim. This agreement, however, not having proved unanimous, and diplomatic action being thus interrupted, the cabinets recommended negotiations in consequence of the aggravation of the crisis by the massacres in Bulgaria, the revolution in Constantinople, and the war with Servia and Montenegro. Thereupon, through the initiative of the English government a basis was agreed upon, and guarantees of pacification were proposed to be discussed at a conference to be held at Constantinople. This conference arrived, during its preliminary meetings, at a complete understanding, both as to the conditions of peace and as to the reforms to be introduced. The result was communicated to the Porte as the fixed and unanimous wish of Europe, and met with an obstinate refusal.

"Thus," continued the prince, "after more than a year of diplomatic efforts at-

testing the importance attached by the great powers to the pacification of the East, the right which they had, in view of the common welfare, to assure that pacification, and their firm determination to bring it about, the cabinets again found themselves in the same position as at the commencement of the crisis, which had been moreover aggravated by bloodshed, heated passions, accumulated ruin, and the prospect of an indefinite prolongation of the deplorable state of things which hung over Europe, and justly preoccupied the attention of both peoples and governments. Still, in spite of all this, the Porte made light of her former engagements, of her duty as a member of the European system, and of the unanimous wishes of the great powers. Far from having advanced one step towards a satisfactory solution, the Eastern question had become aggravated, and was at that moment a standing menace to the peace of Europe, the sentiments of humanity, and the conscience of Christian nations."

Under these circumstances, and before determining on the steps which he might think proper to take, the Emperor of Russia was desirous of knowing the limits within which the cabinets with whom he had till then endeavoured, and still desired so far as might be possible to proceed in common, were willing to act. He pointed out that the object held in view by the great powers was clearly defined by the proceedings of the conference, and that the refusal of the Turkish government threatened both the dignity and the tranquillity of Europe. It was thus absolutely necessary for Russia to know what the cabinets proposed to do with a view of meeting this refusal, and insuring the execution of their wishes.

With this object in view, Count Schouvaloff had an interview with Lord Derby on Feb. 21. He said that the Russian government were in a position of considerable difficulty; and that the expense and inconvenience of keeping up their armaments on a war footing was very great, and could not be continued indefinitely. On the other hand, unless public opinion could be satisfied by the announcement of some specific advantage that had been gained by the armament, it would be difficult, if not impossible, to proceed to demobilise the forces which had been placed on a war footing; and even the Minister of Finance, who was necessarily most alive to the disadvantages of the situation, would prefer a speedy campaign to the alternative of disarmament, with the possible necessity of a fresh mobilisation next year.

Count Schouvaloff then spoke of the proposal made by Midhat Pasha to Sir H. Elliot, that a fixed time—say a year—should be granted to the Porte for carrying out the reforms, and that if at the end of that period it were found that fair progress had not been made, the Turkish government would be ready to submit to the appointment of an international commission, or such other form of control as might be held desirable. Of this idea, Count Schouvaloff seemed to think favourably, and to believe that in some arrangement of this kind the groundwork for a settlement might be found, and even added that he did not consider it necessary that in the reply to be given to the circular of Prince Gortschakoff there should be any indication of an intention to resort eventually to united measures of coercion against the Porte. It would, in his opinion, he said, be sufficient that the reply should be so conceived as not to imply that Russia was to be left to herself to secure what advantages she deemed necessary for the Christian populations of Turkey.

This expression of opinion on the part of Count Schouvaloff, inaugurated what may be called the "Golden Bridge" period in the Anglo-Russian negotiations. It was assumed—most erroneously assumed—that Russia did not mean to go to war, but had determined simply to make a great military demonstration for the purpose of intimidating the Turks. This view, contrary to the opinion of those competent to judge, was industriously propagated; and the idea was also much encouraged by the Russian government as calculated to increase the disinclination of the Porte to yield, and thus offered the Russian government an additional excuse to proceed to extremities.

At the same time, however, Prince Gortschakoff pressed the British government for a reply to his circular and a declaration of their policy. He declared to Lord Loftus that the position of affairs was extremely prejudicial to Russia; that the mobilisation of the army cost 13,000,000 roubles monthly; and that a prolonged delay in ascertaining the decision of the European powers imposed on Russia a

costly sacrifice. Lord Loftus replied, that he must admit that any precipitate action on the part of Europe would be most unwise and ill-judged at that moment; for if peace were happily concluded between the Porte, Servia, and Montenegro, one of the objects of the European conference would be attained. In regard to the question of reforms, it could not be expected that the Porte could put them into execution in twenty-four hours. The greater portion of the reforms recommended by the conference had been accepted by the Porte, and harmonised with the constitution which had been proclaimed, and it was but reasonable, therefore, for Europe to grant a certain respite to the Porte to enable it to prove its sincerity in the assurances given. A period of twelve months would enable the Porte to give evidence of its determination to carry out the proposed reforms. Prince Gortschakoff, however, replied that Russia could not wait for twelve, or even six months, with the military cost she was now incurring. The reforms, he observed, could be perfectly inaugurated within two months; and, on March 11, he instructed Count Schouvaloff to present to the British government the draft of a protocol proposed by the Russian government for the signature of the six powers.

This draft was brought to Paris by General Ignatieff, who had been making a tour through Europe "to obtain medical advice for an affection which he was suffering from," and which was popularly supposed to be "Constantinople in his eye." But the diplomatic nature of his journey was avowed by Count Schouvaloff, who stated that the object of the general's journey had been to furnish explanations as to the real views of the cabinet of St. Petersburg, and to facilitate a pacific solution. He said, that after the sacrifices which Russia had imposed upon herself, the stagnation of her industry and of her commerce, and the enormous expenditure incurred by the mobilisation of 500,000 men, she could not retire nor send back her troops without having obtained some tangible result as regards the improvement of the condition of the Christian populations of Turkey. The emperor was sincerely desirous of peace, but not of peace at any price, and anxiously awaited the replies of the other powers to the Russian circular. The Russian government would not express any opinion by anticipation on these replies, but they foresaw in them the possibility of a great danger. For if the replies were not identical, what would be the position of the imperial cabinet? The agreement of the powers, so fortunately established at the conference, might be broken up in consequence of the shades of opinion manifested in the replies of the several cabinets: would not that be a determining cause to induce her to seek for a solution, either by means of a direct understanding with the Porte, or by force of arms?

Under these circumstances, the count declared, it seemed to the Russian government that the most practical solution, and the one best fitted to secure the maintenance of general peace, would be the signature by the powers of a protocol which should, so to speak, terminate the incident, and which might be signed in London by the representatives of the great powers, and under the direct inspiration of the cabinet of St. James's. It need contain no more than the principles upon which the several governments would have based their reply to the Russian circular. It would be desirable that it should affirm that the present state of affairs was one which concerned the whole of Europe, and should place on record that the improvement of the condition of the Christian population of Turkey would continue to be an object of interest to all the powers, whilst the Porte having repeatedly declared that it engaged to introduce reforms, it would be desirable to enumerate them on the basis of Safvet Pasha's circular. In this way there could be no subsequent misunderstanding as to the promises made by Turkey.

As a period of some months would not be sufficient to accomplish these reforms, it would be preferable not to fix any precise limit of time. It would rest with all the powers to determine, by general agreement, whether Turkey was progressing in a satisfactory manner in her work of regeneration; but, at the same time, the protocol should mention that Europe would continue to watch the progressive execution of the reforms by means of their diplomatic representatives.

If the hopes of the powers should once more be disappointed, and the condition of the Christian subjects of the Sultan should not be improved, the powers would reserve to themselves to consider in common the action which they would deem indispensable to secure the well-being of the Christian

population of Turkey, and the interests of the general peace.

In reply to this proposal, Lord Derby requested Count Schouvaloff to mention to his government the three following provisos, to which the assent of her majesty's government to the protocol must be held to be subject:—

1. That some formal pledge must be given of the intention of Russia to disarm if this protocol were signed.

2. That it be understood that the Porte would not be asked to sign the protocol: and,

3. That the agreement of the other powers would of course be necessary before the terms of the document could be considered as settled.

To these conditions Count Schouvaloff agreed, and matters for the moment appeared to be taking a favourable turn.

But in the meantime a cabinet council was held, and at this council it was evidently determined to make a cardinal question of the first condition, and to refuse to sign the protocol until Russia had given a formal assurance to demobilise: for, three days later, on March 17th, Lord Derby wrote to Lord Lyons, saying that he had communicated privately to the French ambassador a copy of the draft protocol on the affairs of Turkey, as settled between Count Schouvaloff and himself, and accepted by the count *ad referendum* to his government.

He also stated in the private note forwarding the draft, that it was understood that the Turkish government would not be asked to sign the protocol; that its acceptance by her majesty's government was subject to the assent of the other four powers; and further, that her majesty's government could only agree to become parties to it on the condition of receiving a formal assurance in writing from the Russian government that they would demobilise their forces.

Meantime, General Ignatieff came to London, and, with Count Schouvaloff, contended in the first place that the bargain as offered by Lord Derby was not a fair one. Turkey, not being required to sign the protocol, was in no way pledged to disarm; the recommendation to do so, addressed to her by the powers, being merely in the nature of advice. It was unreasonable, they argued, that Russia should bind herself to disarm as a condition of the British government signing a document which left Turkey free on that point. They objected, secondly, that the state of war still continued between Turkey and Montenegro; that if the Montenegrin State were to be attacked and invaded, Russia would be bound in honour to interfere for its protection, the fulfilment of which duty would be rendered impossible to her by a promise of demobilisation. Thirdly, they argued, that as a question of dignity it was unsuitable that Russia should be called upon to disarm before any similar appeal was addressed to Turkey.

Thus it was the Porte, they said, which ought to take the initiative, inasmuch as it was not before Russia alone, but before all Europe, that she was called upon to lay down her arms. They observed, further, that the condition of the two armies was essentially different—the Russian army being composed of regular troops, subject to strict military discipline; whereas the Turkish forces were to a large extent composed of irregulars, whose remaining under arms was a perpetual source of danger to the surrounding population.

In continuation of this argument, they pointed out that the demobilisation of the Russian forces could be accomplished in eight days; that the Turkish troops, on the other hand, could not be sent back to their homes under a period of many weeks, or perhaps months; and it was only reasonable, therefore, that the latter should be the first to begin the process. In connection with this subject, General Ignatieff observed, that so large a part of the male population of Asiatic Turkey had been withdrawn from the cultivation of the soil for the purpose of being placed under arms, that unless they were speedily sent home, famine would be the inevitable result. Lord Derby then asked whether they could give him any statement as to the conditions under which the Russian government would undertake to demobilise, supposing always that they were ready to give such assurances on any conditions and in any form. In reply, Count Schouvaloff said that he was not authorised to speak officially on the subject; but he expressed it as his opinion, in which General Ignatieff also concurred, that the emperor would be willing to disarm on three conditions;—

1. That the Porte should take the initiative.

2. That peace should be concluded

with Montenegro as it had been with Servia.

3. That the Turkish reforms should be seriously taken in hand.

And he added a further proviso, that it must be understood that demobilisation would be stopped at once in the event of fresh massacres being perpetrated on the Christian populations.

Lord Derby, however, remained firm until Count Schouvaloff, on behalf of his government, proposed that if the Porte should accept the advice of the powers as contained in the protocol, the Sultan should send a special envoy to St. Petersburg to treat on the question of mutual disarmament, to which the emperor, on his part, would consent.

On this condition Lord Derby consented to sign the protocol in the amended form agreed to by the various powers as follows:—

"The powers who have undertaken in common the pacification of the East, and have with that view taken part in the conference of Constantinople, recognise that the surest means of attaining the object which they have proposed to themselves, is before all to maintain the agreement so happily established between them, and jointly to affirm afresh the common interest which they take in the improvement of the condition of the Christian populations of Turkey, and in the reforms to be introduced in Bosnia, Herzegovina, and Bulgaria, which the Porte has accepted on condition of itself carrying them into execution.

"They take cognizance of the conclusion of peace with Servia.

"As regards Montenegro, the powers consider the rectification of the frontiers and the free navigation of the Boïana to be desirable in the interest of a solid and durable arrangement.

"The powers consider the arrangements concluded, or to be concluded, between the Porte and the two principalities, as a step accomplished towards the pacification which is the object of their common wishes.

"They invite the Porte to consolidate it by replacing its armies on a peace footing, excepting the number of troops indispensable for the maintenance of order, and by putting in hand, with the least possible delay, the reforms necessary for the tranquillity and well-being of the provinces, the condition of which was discussed at the conference. They recognise that the Porte has declared itself ready to realise an important portion of them.

"They take cognizance specially of the circular of the Porte of the 13th of February, 1876, and of the declarations made by the Ottoman government during the conference and since, through its representatives.

"In view of these good intentions on the part of the Porte, and of its evident interest to carry them immediately into effect, the powers believe that they have grounds for hoping that the Porte will profit by the present lull to apply energetically such measures as will cause that effective improvement in the condition of the Christian populations which is unanimously called for as indispensable to the tranquillity of Europe, and that having once entered on this path, it will understand that it concerns its honour as well as its interests to persevere in it loyally and efficaciously.

"The powers propose to watch carefully, by means of their representatives at Constantinople and their local agents, the manner in which the promises of the Ottoman government are carried into effect.

"If their hopes should once more be disappointed, and if the condition of the Christian subjects of the Sultan should not be improved in a manner to prevent the return of the complications which periodically disturb the peace of the East, they think it right to declare that such a state of affairs would be incompatible with their interests and those of Europe in general. In such case they reserve to themselves to consider, in common, as to the means which they may deem best fitted to secure the well-being of the Christian populations, and the interests of the general peace."

This protocol was signed, on March 31, by the representatives of the six powers, and was accompanied by an annexe, to the effect that if the disarmament should not take place, the instrument was to be considered null and void. This declaration, which was supposed to be kept secret, was communicated to the Porte together with the protocol, to which they were requested to give immediate attention. It soon became evident that the Porte was disinclined to yield an inch; and Prince Gortschakoff informed Lord Loftus, on April 6, that, in regard to the intentions of the Porte, the intelligence received from the Russian

TURKEY in EUROPE

chargé d'affaires was not satisfactory. The Porte had received information of the protocol, as also of the declarations annexed to it. He regretted that Lord Derby's declaration should have been known to the Porte, as he feared that it might encourage its resistance to the protocol, and thus neutralise the good effect which it might otherwise have produced. He then added, in an earnest and decided tone, that if the Porte should reply verbally or in unsatisfactory or evasive language, the imperial government would consider the period of negotiations as closed, and the time for military action arrived. It was impossible, said the prince, for Russia to incur any longer the heavy pecuniary sacrifices which she was now bearing. The mobilisation cost her 750,000 roubles daily, and it had continued for several months. Russia would not, therefore, consent to renew the thread of negotiations, which might be dragged on for months, to end only in a profitless result. Finally, he concluded, they had arrived at the eleventh hour, that it was a question of days, and that a decision one way or the other must be taken by the 13th of April. He stated that the emperor could make no further concessions, and that his majesty would not recede from the position he had taken. The answer, therefore, of the Porte was of the most vital importance, as on it would depend the question of peace or war.

This answer came on April 9th, in the shape of a long despatch, which was summed up as follows:—

"Strong in the justice of her cause, and with confidence in God, Turkey declares that she ignores what may have been decided without her and against her. Determined to keep the place which Providence has destined her for, she will not cease to oppose to the attacks which are directed against her, the general principles of international right, and the authority of a great European compact which binds the honour of the signatory powers of the protocol of the 31st of March, which last document has no legal validity in her eyes. She appeals to the conscience of the cabinets, which she is justified in considering as animated towards her with the same sentiments of equity and friendship as in the past."

All hopes of peace disappeared with this reply, and, on April 23rd, the Czar, after reviewing his troops at Kishineff, addressed to them the following words:—

"I have done everything in my power to avoid war and bloodshed. Nobody can say that we have not been patient, or that the war is of our seeking. We have practised patience to the last degree; but there comes a time when even patience must end."

On the next day, April 24th, a manifesto was published, of which the following is a reproduction:—

"Our faithful and beloved subjects know the strong interest which we have constantly felt in the destinies of the oppressed Christian population of Turkey. Our desire to ameliorate and assure their lot has been shared by the whole Russian nation, which now shows itself ready to bear fresh sacrifices to alleviate the position of the Christians of the Balkan Peninsula. The blood and the property of our faithful subjects have always been dear to us, and our whole reign attests our constant solicitude to preserve to Russia the benefits of peace. This solicitude never failed to actuate us during the deplorable events which occurred in Herzegovina, Bosnia, and Bulgaria. Our object before all was to effect an amelioration in the position of the Christians in the East; but having now exhausted our pacific efforts, we are compelled, by the haughty obstinacy of the Porte, to proceed to more decisive acts. A feeling of equity and of our own dignity enjoins it. By her refusal Turkey places us under the necessity of having recourse to arms. Profoundly convinced of the justice of our cause, and humbly committing ourselves to the grace and help of the Most High, we make known to our faithful subjects that the moment foreseen, when we pronounced words to which all Russia responded with such complete unanimity, has now arrived. We expressed the intention to act independently when we should deem it necessary, and when Russia's honour should demand it. In now invoking the blessing of God upon our valiant armies, we give the order to cross the Turkish frontier."

War was thus declared, and with that step the treaty of Paris and the result of the Crimean war openly overthrown by Russia. Such was the end of the Constantinople conference; such the result of the vacillating, invertebrate policy of the British cabinet. They would neither actively intervene to insist upon peace being preserved, neither would they engage in war to enforce the observance of a treaty which had been imposed upon Russia twenty years before.

CHAPTER XIII.

THE MARCH ON THE DANUBE.

ALMOST until the Russian troops had crossed the frontier, there was a very prevalent opinion that the Czar had no intention of really proceeding to extremities. It was thought in many circles that the Russian commanders merely intended to make a demonstration, and to endeavour to overawe the Turks into compliance with the demands made at the Constantinople conference.

But military men, and above all those who had been at Kishineff, and had an opportunity of seeing to what an extent the Russian preparations had been carried out, were fully convinced that Russia, from the very first, fully intended to carry out her programme by force of arms.

Least of all taken by surprise was Roumania. This country certainly was in a peculiar position. Lying between the two hostile armies, it had the choice of remaining neutral or of joining the ranks of one of the two combatants. As to the international duty of the country, it was perfectly plain. By the convention of August 19th, 1858, at the conference of Paris, which had clearly defined the position of Moldavia and Wallachia, Roumania was placed under the supremacy of the Porte, and formed a portion of the Turkish empire. But the Turkish government had completely alienated the Roumanians in consequence of the impediments which had been always opposed to the free development of the country, by the refusal to allow Roumania to conclude commercial treaties, and by vexatious frontier legislation for the benefit of the Turkish pashas in Bulgaria, who managed to get the laws passed by their friends in Constantinople in order to gain bakshish by allowing them to be evaded by those who paid for the privilege. There was thus no love for the Turks; and, besides, if they allied themselves with the Porte, they would have Russia for an enemy, Roumania would become the battle-field for the hostile armies, and, whether Turkey won or lost, there would have been nothing for Roumania to gain. On the other hand, by allying themselves with Russia, the battle-field would be transferred into Bulgaria—in itself no small advantage—and there was no doubt that, at the least, their independence would be the smallest reward for their help. Neutrality would probably have been the best course to adopt; for, in case of any territorial changes on the Danube, it was certain that Roumania would not be forgotten by the powers at the conclusion of peace; and the country would have been spared much odium by refusing to join in the bull-baiting to which Turkey was being subjected on all sides.

It soon became clear, however, that Roumania did not intend to observe any real neutrality. Opportunity was at once taken to protest against Roumania being subjected to the new constitution which had been promulgated in Turkey, and according to which all the subjects of the Porte were to be henceforth known as "Ottomans." After much deliberation and negotiation, the Porte at last declared that the new constitution did not apply to Roumania, the relations of which to the Porte remained the same as heretofore.

Under these circumstances there was no valid reason for Roumania openly to declare war against Turkey by an offensive and defensive alliance with Russia; and thus, on April 16th, 1877, the Roumanian minister, Cogalniceanu, addressed a circular to the powers, in which he asserted the intention of Roumania to observe strict neutrality, to preserve peace, and injure no national interest whatever.

On the same day, however, the Russo-Roumanian convention was concluded. The Russian armies were to be allowed free transit through the country; the railways, rivers, roads, post, telegraph, and all the material resources of the country to be placed at the disposal of the Russian commanders, who were also to have the right to establish reserves at any point, except Bucharest, in the rear of the active army; and to take all necessary measures to ensure their communications with their basis of operations east of the Pruth.

This convention, though scarcely amounting technically to an alliance, would certainly be regarded as such by the Turks;

and measures had therefore to be taken to provide against a *coup-de-main* on the part of the Turkish commanders on the Danube. Consequently, two days later, on April 18th, 10,000 men were called out to concentrate at Bucharest, which is only a few miles from the Danube; and on April 20th, Prince Charles issued a decree for the immediate mobilisation of the standing army, the militia, and the reserves. At the same time a considerable portion of the army and eighty cannon were sent to Kalafat, opposite Widdin, where the Russians had received so disastrous a check during the Crimean war.

These military preparations, of course, led to inquiries by the Porte as to their object; and at the same time Safvet Pasha called upon Prince Charles to take up arms and concert measures with the Turkish commanders to repel the impending invasion of the Russians. To this Cogalniceanu replied, that the decision of the question, whether Roumania should take part in the war or remain neutral, was for the chamber to pronounce; but that, in any case, the entry of Turkish troops would be opposed.

On April 26th, Prince Charles opened the chamber, and said that, as all his endeavours to induce the powers to acknowledge the right of Roumania to remain neutral had been fruitless, all that he could now do was to prevent Roumania from becoming the seat of war. The powers had not protested against the entry of the Russian troops, and thus Roumania had to look after her own interests. Hereupon the convention with Russia was ratified by the chamber with seventy-nine votes against twenty-five, and in the senate with forty-one against ten.

Roumania thus practically declared war to Turkey, and Prince Charles himself took the command-in-chief of the army, which consisted of 38,000 infantry, 8,200 cavalry, and 120 cannon. The condition of the army was excellent; the infantry was well armed, and the artillery consisted entirely of Krupp guns. The army was divided into two army corps, each consisting of two divisions. The chief of the general staff was General Slaniceanu; the commander of the first corps, General Lupu, and of the second, General Radovici. Abandoning the eastern portion of the country to the Russian army, the Roumanian troops occupied the western portion between Krajova and Kalafat, where they remained on the defensive until the beginning of September.

Meantime, on April 24th, the same day that war was declared, the Russian army crossed the frontier. Six *corps d'armée*, the 7th, 8th, 9th, 10th, 11th, and 12th, had been collected on the Pruth under Generals Prince Barclay de Tolly, Radetzki, Krüdener, Prince Woronzoff, Prince Schahkoffskoi, and Wanoffski. Commander-in-chief was the Grand Duke Nicholas, who had chosen General Niepokoitschitzki for his chief of the staff, assisted by General Levitzki.

General Niepokoitschitzki was a short, square-set, but active-looking man, hale and hearty, and, in spite of his seventy years, looked as fit to make a campaign as if he were twenty years younger. Of German extraction, his original name, *Unruh*, was translated into its Polish equivalent, signifying "restlessness"—a name, by the way, singularly inappropriate, for General Niepokoitschitzski was a man of the most placid manner, and the equanimity of his temper proverbial among the officers who had served under him. A classical captain asserted that he very felicitously combined the *suaviter in modo* with the *fortiter in re*. His hair, whiskers, and moustache were snow-white; but there was a flush of hale colour on his cheek; his eye was not dim, neither was his natural force abated. He wore a simple undress uniform, with the aiguillettes which distinguish the staff officer, and his only decoration was the cross of St. George.

The general had seen more service than most of the Russian leaders, and his experience of staff duty in particular had been long and continuous. He joined the army as an infantry officer, and first saw active service in the Caucasus, where his merit was so conspicuous that he speedily received a staff appointment. He held an important and responsible office on the general staff in the army which Russia sent to co-operate with Austria in quelling the Austrian insurrection of 1849; and in the Crimean war, or rather in the war which we know conventionally by that name, he was chief of staff to one of the corps composing the army with which Gortschakoff occupied the principalities, and took part, under Paskiewitch, in the memorable siege of Silistria. Since 1855 he had seen no active service, but had been continually in military employment of one sort or other,

and was chosen chief of the staff of the army of the south, because of his acquaintance with the region of the Danubian valley, derived from his experience in the campaign of 1854.

General Levitzki had seen no active service, and was a professor at the military academy; so that both he and his superior were but little more than theorists as far as the science of war since 1856—'58 was concerned—a drawback which was destined to make itself most conspicuous.

Of the men who had seen active service in all its phases, there were few who had had the experience of General Skobeloff, a tall, handsome man, with a lithe, slender, active figure, a clear blue eye, and a large, prominent, but straight, well-shaped nose, the kind of nose it is said Napoleon used to look for among his officers when he wished to find a general, and a face young enough for a second lieutenant although he was a general—the youngest in the Russian army. He made his name famous in Khiva, under General Kauffmann, when he was only a colonel. It will be remembered that, of the five columns which marched on Khiva, only four arrived, and that one (that of Colonel Markosoff) was obliged to turn back in the middle of the desert for want of water. Kauffmann wished to know whether it would be possible for Markosoff to reach Khiva by that route; but the Turkomans with whom he had been fighting had all fled in that direction, and to have explored the route in question with safety, it would have been necessary to employ a strong column, which Kauffmann did not think the matter justified. The only other alternative was for a small party to make the attempt at the risk of falling into the hands of the Turkomans. This Colonel Skobeloff volunteered to do. Taking three friendly Turkomans with him, and disguising himself also as a Turkoman, he started on his perilous journey. He did not return for ten days, when he suddenly turned up at Khiva the day before Kauffmann evacuated the town, after having explored the way to the point at which Markosoff had turned back, measured the depth of the wells, ascertained the amount of water they could supply, and proved that the route was practicable. But Skobeloff's most daring feat was his attack upon the Khokandians, some 7,000 to 8,000 strong, when they were following the Russians, after they had evacuated Namagan. The Russian column numbered only 800 men, with about 400 Cossacks; they had still three days' march to the frontier, and had only fifteen cartridges per man for the infantry, and three cartridges a head for the Cossacks. Under these circumstances General Trotski decided to venture a night attack, and confided his plan to Skobeloff, who was his chief of the staff. Skobeloff at once caught eagerly at the idea, and offered to lead the attack himself; but going on the principle that a night attack should rather be intended to terrify the enemy than to inflict much material harm, he decided to take only 150 Cossacks for the attack. Skobeloff having reconnoitred the ground, perceived that the Khokandians had encamped within a mile and a-half of the Russians, in an open plain, which gave every facility for the manœuvring of cavalry. At midnight he took his 150 Cossacks, divided them into three parties, and cautiously surrounded the enemy's camp. The party led by Skobeloff himself managed to pass the enemy's outposts, who were sound asleep. Then he gave the signal for the attack by firing his pistol, and, followed by his 150 Cossacks, he rode headlong into the enemy's camp of six or seven thousand men, shouting and yelling like fiends, and cutting down everything in their passage.

The effect was tremendous. For a quarter of an hour the plain resounded with shrieks and yells, shots, the trampling of horses, shouts, and groans, and all the uproar of battle. Then all was silence. Skobeloff assembled his Cossacks, and when morning came he found that the whole army of the enemy had disappeared, leaving on the field about 40 dead, 37 standards, 2,000 turbans, 2,000 or 3,000 muskets and sabres, all their camp material and baggage. But what was his astonishment, on calling the roll, to discover that he had not lost a man either killed or wounded. For a small affair it was one of the most brilliant feats ever recorded, for it inflicted a most disastrous defeat on the enemy, saved the Russian detachment, and enabled it to reach the frontier and its base in safety. These kinds of exploits obtained for Skobeloff the reputation, even among the Russians, of being a kind of madman, who would fling away his own life, and those of his troops, without the slightest regard to consequences. General Skobeloff felt rather indignant at this view of his character, and it did him a great injustice, for there was

method in his madness, or rather what at first appeared madness. For instance, attacking 7,000 men with 150 was, as he said, not only not madness, but a reasonable, well-conceived plan, with the requisite number of chances on the side of the attacking party, and one that must have had the approval of all military men. His explanation was as follows:—Irregular troops, even of the very bravest and best, are peculiarly subject to panics when attacked unexpectedly or from an unlooked-for quarter. Now, anybody who has experienced it knows that a night attack is a most terrible and nerve-shaking thing for the army attacked, even when composed of regular troops. For irregular troops it is certain destruction and defeat, if the attacking party can penetrate their lines before they have time to get fairly awake, as in the present case. As to the small number of troops taken by Skobeloff for this attack, he says that the object of his attack was not so much the hope of cutting the enemy to pieces, as to strike terror among them and create a panic; and for this purpose 150 Cossacks in the night, when their number could not be seen, were quite sufficient, as they could make as much noise and produce as great an effect as ten times their number; while a small party was less liable to confusion, and to the danger of killing each other—the great danger of a night attack for the attacking party; and finally, if they did not succeed, and should all be killed, an eventuality also to be taken into account, the loss would be small, and such as not to seriously weaken the detachment. It will be seen, therefore, it was not such a mad business after all; and the result proved Skobeloff had really calculated the chances as any prudent general would do, and simply found that they were on his side. Although the new Khan of Khokand, after this campaign, agreed to sign a new treaty of peace, the Russians had no sooner withdrawn from the country than he again opened hostilities, and Kauffmann found himself under the necessity of obtaining permission to conquer and annex the country; and this task he entrusted to Colonel Skobeloff, who, as commander of an independent army, was promoted to the rank of general. The task was accomplished with rapidity and skill, as may be readily understood when it is stated that when the khan surrendered to General Skobeloff, after a three months' campaign, nearly his first words were, "Before we begin to talk, let me sleep, for I have not had a night's rest nor a sound sleep for more than a month."

Of the other generals on the Danube, Dragomiroff, an accomplished strategist and tactician, and General Gourko, a dashing cavalry officer, were the only men who enjoyed a modern reputation. The order to cross the frontier having been given, it was carried out with apparent celerity at first. The various corps had been in position for weeks, and had only to lay their hands on the points in the immediate vicinity where all had been well prepared and there was no enemy to encounter. But the march on the Danube was executed with a delay and dilatoriness which soon cancelled the favourable impression caused by the promptitude with which the first movements were executed.

From Bessarabia there was but one single line of railway between Ungheni to Jassy, whence it turns southwards to Bucharest, *viâ* Barboschi, where it crosses the Sereth. In consequence of the rains, this railway, constructed originally in a very flimsy fashion, was not safe at many points, and the roads were also in a very bad state. These impediments might have been considerably increased by the Turks had they destroyed the bridge over the Sereth at Barboschi before the arrival of the Russian troops. The despatch of a few of the monitors of the Turkish Danube flotilla would have amply sufficed to overpower the Roumanian garrison at Galatz, and to have completely destroyed the bridge, which was only thirty kilometres distant from Matchin, where the Turkish flotilla was stationed. The Turks, however, acting upon their old traditions, and refusing to believe that they had in a very large measure forfeited the sympathies of Europe, still reckoned upon these sympathies, and imagined that by strictly confining themselves to defensive measures, they would still further secure these sympathies and cast still more odium upon the aggressive policy of Russia. Acting on this principle throughout, and feeling certain that, sooner or later, they would succeed in gaining the assistance of one or more of the Western powers, they neglected, on hundreds of occasions, to make use of the opportunities literally thrown at their feet.

The Russians, however, were unfettered by any such considerations, and let no scru-

ples stand in their way. Thus General Skobeloff, with his cavalry, accomplished the march in one day from the frontier to Barboschi, where he immediately seized the bridge, and held it until the infantry and artillery came up, and definitely secured this most important point. This being accomplished, the Russian troops slowly, but deliberately, began to spread themselves out along the Danube without any hurry or confusion, without any molestation from the Turks. This behaviour of the Turkish commanders is below criticism. They had a powerful fleet in the Black Sea, and a strong flotilla on the Danube; whilst the Russian naval force in the Black Sea was still in embryo, and the Baltic fleet was useless, as it could not force the Dardanelles. Yet, in spite of all this, the Turkish fleet accomplished nothing, and did little more than common transport service, which could have been done cheaper and quicker by ordinary merchant vessels. As for the Danube flotilla, the men and officers seemed panic-stricken by the energy with which the Russian commanders erected batteries and laid torpedoes in the river, at Reni, below Galatz, and at the entrance of the arm of the Danube, between Braila and Matchin, where the Turkish fleet rode at anchor, and, by this operation, was literally caught in a trap. On May 11th, one of these vessels, the *Lutfi Djelil*, an ironclad monitor with five guns, steamed out from Matchin, followed by two gun-boats, and at half-past three was stationary under cover of the wooded end of the island, with its three masts visible above the trees. The Russian gunners from the batteries close to Braila, below the Roumanian barracks, opened fire from their light guns, the range being about four kilometres, but without effect. The general officer present then gave directions for two eight-inch guns of position, mounted in the battery, to come into action. The first shot had no effect. The second shot, fired at a high elevation with a low charge, dropped on the deck of the turret-ship, and crushed down into the powder magazine. Immediately a tremendous flash and glare shot up from the interior of the doomed craft, followed by a heavy white smoke which hung like a pall. Through this white cloud there shot up to a great height a spurt of black fragments of all shapes and sizes. When the smoke drifted away, all that was visible of the turret-ship was her stern, with the mizen-mast standing, whence still fluttered the Turkish flag. The ship had gone down by the head in shallow water. The fore and main masts were blown out at once. Two Russian steam-launches put off from Braila, boarded the wreck, gained the flag, gathered some of the *débris*, and picked up only two men, the fireman and the engineer, both severely injured, out of a crew of 200 men, under the command of Kezim Bey. Fragments of the wreckage were picked up down the stream at Galatz. The Russian enthusiasm in the battery was intense, and the officers embraced each other, whilst the Turkish gun-boats hurried away abruptly on the explosion of the turret-ship; but returned an hour later, and fired on the Russian launches engaged in looting the ship as much as possible.

This was a severe blow to the efficiency of the Turkish fleet; but the Turks and their friends consoled themselves with the assertion, or belief, that the destruction of so powerful a vessel was due to accident. But a fortnight later they experienced a second disaster. The naval officers and sailors who had been sent down to the Danube from the Baltic were fired by the ambition to outdo their comrades of the line, and make an attack on the Turkish vessels with their torpedoes. With this object an expedition was arranged, consisting of four small steam-launches, two of which were to make the attack, and the two others to hold themselves in readiness to render assistance in case, as was probable, of an accident to either of the attacking ones. The two launches which were to make the attack were commanded by Lieutenants Dubasoff and Shestakoff, and manned, one by fourteen, the other by nine men. The crews were protected by an iron screen or awning, which covered the boat completely over from stem to stern, and which was sufficiently thick to stop a bullet. This screen, as well as the boat, was painted black, so as to be scarcely distinguishable at night, and the crew were thus protected against the fire of small arms, except the man at the wheel, who directed the movements of the boat, and who was necessarily exposed. The crews embarked in the boats a little after twelve o'clock on Friday night, May 25th, at a distance of about seven miles from where the Turkish monitors were lying. The night was dark and rainy, and the clouds completely obscured the moon, which nevertheless prevented the night

from being one of complete pitchy darkness. There was just enough light to enable them to distinguish the dark masses of the Turkish gun-boats without themselves being easily seen. After an hour's steaming they came within the immediate neighbourhood of the enemy's flotilla. The engines of the launches were so constructed as to make very little noise, and when they were slowed down all the sound they made was a low dull kind of throbbing noise that was almost drowned by the continual croaking of the frogs, which are very large and very numerous along the marshes of the Danube. Nevertheless, the quick ear of a Turkish sentinel caught the unusual sound, and he cried out, "Who goes there?" in Turkish. The boats advanced without replying The sentinel again called out, and again remained without an answer. He called out the third time, and as it was becoming evident that the ship would be alarmed, Lieutenant Dubasoff replied, in Turkish, "Friends!" and continued to advance. The sentinel, however, was by no means satisfied, and after calling out again two or three times, he finally fired. Then the Russians, who were by that time very near the doomed monitor, heard a noise in the ship. There was a scuffling of feet, the rushing about of sailors, cries and shouts, and the voice of an officer commanding them to prepare the guns for action. They heard the order given for the gun in the bow to be fired. They heard it given three times, and three times they heard the click of the hammer, showing that an attempt had been made to fire, and that the gun had refused to go off. Finally, the third time the order was given, a globe of flame leaped over the side of the gun-boat, and a shell went whistling over their heads. They were evidently seen by the Turks. One of the boats, that of Shestakoff, then drew off, while that of Dubasoff continued to advance. Each boat was armed with two torpedoes, attached to the end of a long spar that projected from the bow. These spars were arranged to move on pivots, and could be swung round so as to describe a half-circle. The torpedoes were so placed that they could be detached from the spars at any moment; and, in addition to this, long light chains were attached to them by which they were to be tied on any projecting part of the attacked ship, and they were connected with the boat by a fine flexible wire about 100 yards long. The officer in command manipulated a small electric battery, carried in the boat. A lively fusilade had by this time been opened upon the boat by the Turks; but in spite of this, the launch of Dubasoff shot under the bow of the monitor, the chain which was fastened to the torpedo was flung round a chain or rope that was hanging from the bow of the ship, the torpedo was dropped from the spar, and the current of the river carried it against the bottom of the ship. The launch then shot away again until the full length of the electric wire had been reached. The officer applied it to the battery in the boat, and at the same instant a huge volume of water rose up into the air, which half filled and nearly swamped Dubasoff's launch, and a fearful explosion was heard, which completely drowned the shouts and cries and firing of the Turks. In the meantime the other monitors became alarmed, and, without knowing the cause, fired at random, and a fearful scene of terror and confusion ensued. They not only fired on the Russian launches, that still kept dodging about like mosquitoes, but in their panic and confusion fired into each other. The bullets rattled over the iron awnings of the launches, but did them no harm. They were not once struck, although the bow of one was pierced by a piece of a shell that exploded near it. The two launches were now on opposite sides of the doomed ship. Dubasoff perceived that the monitor was sinking down by the head, but very slowly; while the Turks continued to fire away blindly, but incessantly, both with small arms and cannon. Dubasoff cried out to Shestakoff to try and place another torpedo in order to make sure of the ship, and the latter slipped in under the stern and put down another torpedo in the same manner as the previous one. He then shot off until he was at a safe distance, applied the electric battery in the same manner, and a still more terrible explosion followed. Parts of the ship were blown into the air, as was very soon perceived when a large plank a few seconds later came down endways, driving its way through the iron screen into the boat, between two of the sailors who were back to back close to each other, without injuring either of them. Then the monitor sank rapidly, and after a few moments nothing but her masts were visible above water. The crew had all either been drowned or had escaped by swimming. Day now began to break, and

the position of the two little launches within the near range of two other Turkish monitors became very critical. To add to the danger of the situation, the screw of one of them got fouled, and the boat became unmanageable; while they perceived a Turkish launch from one of the other monitors bearing down on them. They opened a fire of small arms on the Turkish launch, which veered off and showed no disposition to come any closer. One of the sailors got out into the water, and after several minutes' exertion succeeded in clearing the screw, and the two launches, having accomplished their mission of destruction, darted off, passed under the fire of the two other Turkish gun-boats, escaped unharmed, and, rejoining their two consorts, returned in triumph to their place of starting. The grand duke received the news within two or three hours after, and the rejoicing among the Russians was very great; the two officers and the crews of the two boats all receiving the Cross of St. George in reward for their daring exploit.

Within a month, therefore, the Russians had accomplished all that it was possible to do. They had seized the Lower Danube, and imprisoned and partially destroyed the Turkish flotilla in the river, which was still sixteen feet above its normal height, and prevented the construction of bridges between the two banks. This is a fact which must be well borne in mind when judging the campaign. It was generally lost sight of during the commencement of hostilities—an error which gave rise to the unfounded belief that the Russians were unprepared, and had neglected many important precautions. Anybody who knows the course of the Lower Danube, with its stretches of muddy, swampy banks, especially on the Roumanian side, will not be surprised that the unusual height of the river, and its long duration, materially impeded operations.

In the meantime the Russian troops were being placed in position, and on June 6th, when everything was reported to be in readiness for the passage of the river, the Czar, accompanied by Prince Gortschakoff and a numerous suite, arrived at Ploesti, north of Bucharest, where the Grand Duke Nicholas had taken up his quarters, where, on May 8th, he issued orders for the mobilisation of three more army corps, thus bringing up the total in Europe to nine corps. Of these nine corps, seven were set up on the Danube; whilst two, the 7th and 10th, occupied the coast between Odessa and the Crimea. By the middle of June, the disposition of the troops was as follows:—The 14th corps occupied the line between Galatz and Braila; the 11th was concentrated at Oltenitza and Giurgevo; the 8th at Zimnitza; the 9th at Turn-Magurelli; whilst the 12th, 13th, and 14th formed the second line at Saleasa, Alexandria, and Bucharest.

This disposition of the troops, which was quite well known to the Turks, pointed to an intention to effect the passage of the river between Zimnitza and Turn-Magurelli; and that being the case, the general plan of the Russian advance was easily foreseen, especially when the position of the Roumanian troops was also taken into account.

It was clear that the invading armies had been so disposed that Prince Charles and the Roumanians were to form the right wing of the advance; that the 8th corps, under General Radetzki, and the 9th, under General Krüdener, were to form the centre; and the 14th corps, under General Zimmermann, formed the left wing.

The object of this disposition was to allow the two wings to engage the enemy so as to leave the passage free for the centre to push on to the Balkans, spreading out right and left till it was able to take the Turks between it and the two wings.

The 8th and 9th corps were to lead the attack; the 12th was to protect the right flank of the advance, in conjunction with the Roumanians, against Osman Pasha at Widdin; and the 4th, acting with the 12th, was to protect the left flank of the advance, whilst the 14th harassed the rear of the Turkish positions in the Quadrilateral—at Rustzuk, Schumla, Silistria, and Varna. Strictly carried out, and barring any great mistakes, this plan had everything to recommend it, and most military men predicted for it a complete success, unless the Turks should take a vigorous offensive. Had the Turkish commanders been able to do this—had they thrown their armies across the Danube on either flank of the Russian armies, the course of the war might have been materially altered. Such action might have afforded them some chances of success; and, at any rate, they would have gained an additional line of defence—the Danube—which, as matters stood, was really no line of defence at all, but, on the contrary, a source of weakness.

But Abdul Kerim Pasha, who was entrusted with the command-in-chief of the armies in Bulgaria, distinguished himself only by endless faults of omission rather than commission, but which, in the face of an enemy like the Russians, could not but end disastrously; for though he might entail serious losses upon them, still, as they had practically an inexhaustible supply to draw from, the loss of a few thousand men, more or less, could have no lasting influence on the course of the campaign.

His mistake in allowing the Russians to seize the Barboschi bridge we have already alluded to. From Hirsova, or Matchin, he could easily have so destroyed the railway, and harassed the Russian communications with Kishineff, as to have materially hindered their operations. Operating from Widdin, he could easily have taken Kalafat, and left to Osman Pasha the task of advancing to the Aluta, as Omar Pasha did in 1853. Servia was then not in a state to take any decisive action, and might well have been disregarded. But for all this Abdul Kerim did nothing, though he was repeatedly warned by Blum Pasha, a Prussian engineer in the service of the Porte. To all counsellors he replied that he had a "secret plan," an infallible plan, and that if the Russians should attempt to cross the Danube, they would be *ecrasés*—crushed.

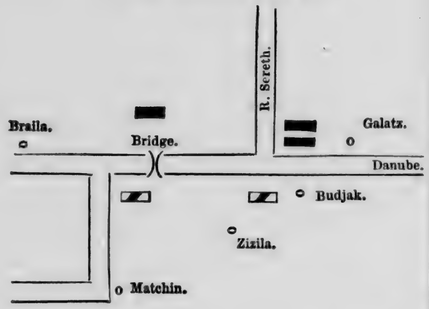
Doubtless, Abdul Kerim's wonderful plan was simply to allow the Russian centre to cross the Danube, and, trusting to Widdin and the Quadrilateral to cover the rear of his own and Osman Pasha's armies, to fold up the Russians with them, and drive them back across the river. Had the Turkish armies possessed any mobility worth speaking of, this plan might have succeeded; but without any of the appliances necessary for the rapid movements of an army, it was predoomed to failure. As it was, the Turks were concentrated in three centres—at Schumla and in the Quadrilateral with about 80,000 men; at Widdin with about 40,000; and south of the Balkans with about 30,000 men. These were regulars. In addition there were a number of irregulars attached to the regulars, of whom there are not even now any reliable figures to be had. But the total of men which the Turks had to oppose to the Russians may be put down in round figures at about 160,000. They were all well-armed and well supplied with ammunition.

Everything was ready, on the Russian side, for the advance by June 6th; and so confident were the Russian leaders of gaining a speedy victory, that on the 8th Count Schouvaloff had an interview with Lord Derby to arrange matters in case the Russians should force their way across the Balkans, and to provide, in that case, for a basis of peace. The answer to this was that England would be obliged to consult her own interests should Constantinople be threatened by the Russian armies; and he also refused to tender any advice to the Porte to the effect that they should yield at the last moment to the demands of the Constantinople conference, as about to be enforced by Russia, and under pressure of the Russian armies.

All hopes of a peaceful solution were herewith destroyed. Diplomacy had arrived at the end of its task, and the future was left to the decision of arms.

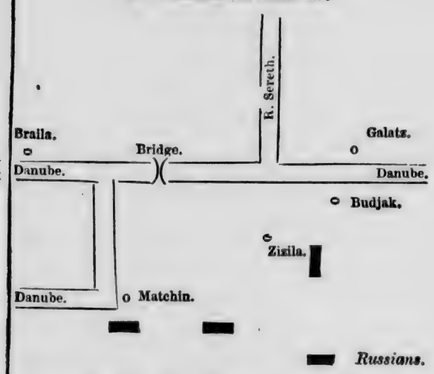
CHAPTER XIV.

THE FIRST PASSAGE OF THE DANUBE.



As soon as the Danube had sufficiently fallen, General Zimmermann received orders to cross the river. The *gros* of his troops lay between Braila and the mouth of the river Sereth, where a bridge had been constructed across the river, with the exception of the finishing trestle portion across the muddy flats left bare by the receding waters. This bridge had been constructed in full view of the Turkish garrison and troops at Matchin without any serious molestation, and it was universally assumed—and with reason—that by this bridge the Russians would pass over into the Dobrudja.

On June 20th, however, General Zimmermann proceeded to Galatz, and brought down two regiments to a point between



Galatz and the mouth of the Sereth, opposite the Turkish village of Budjak, where, on the neighbouring heights, the Turks had taken up a position in small numbers.

The position on June 20th was as is shown in the annexed sketch A.

A—*Position on June* 20.

B—*Position on June* 28.

The *gros* of the 14th corps was concentrated near Braila, at the head of the bridge; two regiments were between Galatz and the Sereth; whilst the Turks had taken up a position in force and in ambush near the Turkish head of the bridge, on the road leading to Matchin; and a small force occupied the heights of Budjak.

During the night of June 21st to June 22nd, General Zimmermann ordered the Rjasan regiment (Count Moltke's regiment) to cross the river in open boats. This was done, and, after several hours' fighting, the Turks were obliged to evacuate the heights and fall back upon Matchin. The next day, June 22nd, the second regiment crossed the river, whereby the Turkish position at Matchin was turned, and occupied on June 23rd by General Zimmermann, who then had the bridge completed, and brought the rest of his troops across without further opposition. By June 28th the position was as is shown in the annexed sketch B.

With these sketches before him, the reader will be able fully to understand the detailed account of the passages.

The news that the Russians had already crossed the river arrived at Braila at 5 A.M., when the inhabitants were already on the alert, gathering in crowds on the river bank, to watch the fight that was going on at the other side of the valley, which could be followed very distinctly by the smoke and the firing. The scene was a most interesting and animated one. The left bank of the Danube, at Braila, is thirty or forty feet high. Below lay the river gleaming brightly in the sunshine, covered with boats, ships, steamers, and barges, which were unable to escape during the time of grace that was allowed to them after the declaration of war, and which the Russians seized and turned to account for military operations. Further down was the bridge, lying low upon the water, stretching far across the wide, swiftly rolling stream, and losing itself apparently among the marshes and reeds on the other side; beyond were marshes, trees, brushwood, tall grass, waving reeds, and rushes, through which could be seen everywhere the gleam of water, showing that the whole valley was still submerged; still further in the distance, and nearly ten miles away, was the town of Matchin, lying at the foot of a mountain slope, with a confused mass of houses, and two tall white minarets rising from amongst them, and clearly defined against the low range of mountains beyond. Down the river, the water, growing broader and wider and deeper, spread over the entire valley, until it seemed to take the dimensions of a lake, where, in the far-off distance, lay Galatz, dim and indistinct in a luminous haze, looking like a mirage city in a mirage ocean. On that range of mountains running down from Matchin, in the direction of Galatz, puffs and long lines of white smoke rose up from the mountain side, and were borne away on the air in thin fleecy clouds. The dull, booming, heavy sound of cannon, a distant roar of artillery, and the continued and rattling crash of small

arms were borne towards Braila in a softened kind of roll on the still, sunny air. It was there that the battle was going on; the Russians were already on the other side, and were attacking the Turks.

General Zimmermann, as we have already said, had gone to Galatz, where he had collected a sufficient number of boats to carry over about 1,800 men at a time, and at daybreak on Friday, June 21st, that number of troops was embarked and started across on the perilous adventure. The distance to be traversed in boats was nearly three miles, and when land was finally reached it was not terra-firma at all, for the ground on the edge of the water was a mere marsh overgrown with reeds and rushes, with the water all over it, too shallow for boats, but deep enough to make the further progress most difficult on foot. It had been hoped that the boats might manage to cross two or three times before the Turks received warning; but the latter apparently had received correct information of the projected movement, and when the first boat-load of Russians arrived they met with a warm reception.

A glance at the sketches will show the Danube running in two separate channels from Hirsova to Braila. The old channel, the one on the right, makes a sharp turn just opposite Braila at Matchin, and runs at right angles with its former course, until it rejoins what is now the main stream, three or four hundred yards below Braila. It was just below the point where the two streams unite that the bridge had been constructed; the road from Matchin, running along the lower banks of the old channel, reaches the river at this point; and, in fact, the bridge had been built on the spot where the crossing is usually effected by means of a ferry. The whole valley of the Danube here, as well as this road, was still for the most part under water. Behind Matchin, supposing the observer to be standing at Braila, will be seen the range of mountains or hills extending from Matchin in the direction of Galatz, opposite which place they diminish to a low narrow point, or promontory, which, rising out of the water, appears to be considerably higher than it really is. It was just opposite this point that the Russians landed; and here the Turks were posted on the narrow range of hills, in front of the very spot which the Russians had chosen, and as soon as they came within range the Turks opened upon them a well-directed fire. They had only two pieces of artillery, however, and the Russians were sufficiently well protected by thick plank bulwarks that had been constructed on the side of the boats; and it was not until they began to disembark, and wade through the water knee-deep, that the fire of the Turks commenced to tell. Then the fight became a close and desperate one. The first 1,800 Russians who arrived were obliged to maintain themselves against a very superior number of Turks until the return of the boats with a second lot, by taking shelter wherever they could find it, by advancing part of the way up the heights and taking cover behind rocks, and otherwise availing themselves of every advantage which the ground offered. It is difficult to account for the fact that this inferior force of Russians was not overpowered and driven back into the water by the superior numbers of the Turks; but the fact is that they managed to hold their ground until they were reinforced by the return of the boats.

The hardest part of the fighting, and the greatest loss of the Russians, occurred at this time, and their position was a most critical and trying one, as they had absolutely no means of retreat; they had either to fight or to surrender. The Turks charged them with the bayonet, and the fight became a close and a hot one, though the small number engaged on both sides accounts for the small loss suffered by the Russians. Several Russians were killed and wounded by bayonets, and even the two or three hundred Turkish cavalry charged, or attempted to charge them, and some of the wounded had sabre-cuts, to show how close had been the contact with the daring Turkish horsemen. These latter were Circassians, and fought like tigers. They succeeded in isolating and surrounding an advanced detachment of some fifteen or twenty Russians, and cutting them off to the last man; and in spite of a fire that was poured in upon them, and which caused them very severe losses, they got down from their horses, the better to follow the enemy in the marshy ground. Even the Russians said that the Turks behaved with the utmost bravery and resolution; but as soon as the boats arrived with a second lot the tide of battle began to turn, and the Turks, from acting upon the offensive, were soon obliged to defend themselves. Altogether, two regiments, or about 6,000 Russians, crossed over in the morning with four pieces of

artillery, and the Turks began soon to give way. The Russian artillery, however, proved to be useless, owing to the nature of the ground, which was so marshy that it was impossible to bring the cannon into action until it was no longer needed. As soon as the two regiments had landed they began to push the Turks hard, and, climbing up the heights on both sides, soon succeeded in carrying them. But the Turks only retreated to the next hill, and again made a stand till they were pursued by the Russians, who, after driving them from hill to hill, at last gained the heights above Zizila, where the combat ceased, the Russians having lost 200 men in killed and wounded.

The Turks had only 3,000 men, with half a battery of artillery, and about 300 cavalry. The Russians advanced no further than Zizila on Friday; but it soon became evident that as soon as they wished to advance to Matchin they would meet with little or no resistance. About three o'clock the Turkish cavalry and artillery fell back from the last position, opposite the heights of Zizila, down the hill-side towards Matchin, at full gallop, and in the night, people coming over from that town informed the Russians that the Turks had abandoned the place, and during the night the Cossacks entered and took possession. Matchin was in the hands of the Russians, and the passage of the two army corps stationed about Braila was thus secured. Nothing further of any interest occurred during the night at Braila. The *cafés* and the restaurants, and the *café* concerts—for there is a *café* concert in every hotel—were full of people, Russian officers and inhabitants of the town, all discussing the events of the day. The streets were alive with people, the tread of troops marching through the town, on their way to the bridge, to begin the crossing as soon as the bridge was ready for the operation. There was, however, a good deal to be done before it could be made safe for the passage of large bodies of men or of heavy war materials; and in the meantime General Zimmermann, on his return from Galatz, took with him three steamers from Braila loaded with men, each steamer towing two barges, which were lashed one on each side of it. These barges were protected on the side opposite the steamer by huge wooden bulwarks, built up to the height of a man, with loopholes through them, quite thick and strong enough for protection against a bullet. But a shell striking them would have made sorry havoc among the men on board. Besides these three steamers and six barges, there were any number of small rowing-boats which had started some hours before. In all, General Zimmermann took over on this expedition about 2,000 men, with four pieces of artillery. No caution was used in coming up to the place, as Matchin was already full of Russian troops, and Russian sentinels were overlooking the town and the river, where only twenty hours before had been seen the Turks. As soon as the inhabitants saw the boats coming they formed into a procession, and came down to the shore to meet them with banners, holy pictures taken from the churches, and various other religious emblems. They were led by three priests and some other church dignitaries in full canonical robes, and chanting a hymn. General Zimmermann took off his cap and kissed the little wooden cross that was presented to him, while with a bunch of green leaves they splashed any amount of holy water over his head, and in fact almost drenched him. Each of those who followed were treated with the same copious shower-bath; and as the day was hot, and all were in a terrible perspiration, the ordeal was by no means an unpleasant one. The people then greeted their new friends with loud hurrahs, and marched after them, manifesting the most extravagant joy, especially the boys, whose delight was as unbounded as it was troublesome. Nevertheless, in spite of something that was grotesque about it, all this reception of the conquerors by the conquered, of the invaders by the invaded, had a profound political significance. These people, instead of looking upon the Russians as enemies, and conquerors, and invaders, and oppressors, hailed them with delight and satisfaction as their deliverers from a degrading and terrible bondage, which Europe had condoned and sustained too long. These same people would have hailed Englishmen with the same delight as the Russians, had English help but come in time.

The inhabitants remaining in Matchin were all Christians; the Turkish population, who were in a small minority, fled soon after the declaration of war, carrying away all their worldly goods. A great part of the inhabitants, too, were Russians,

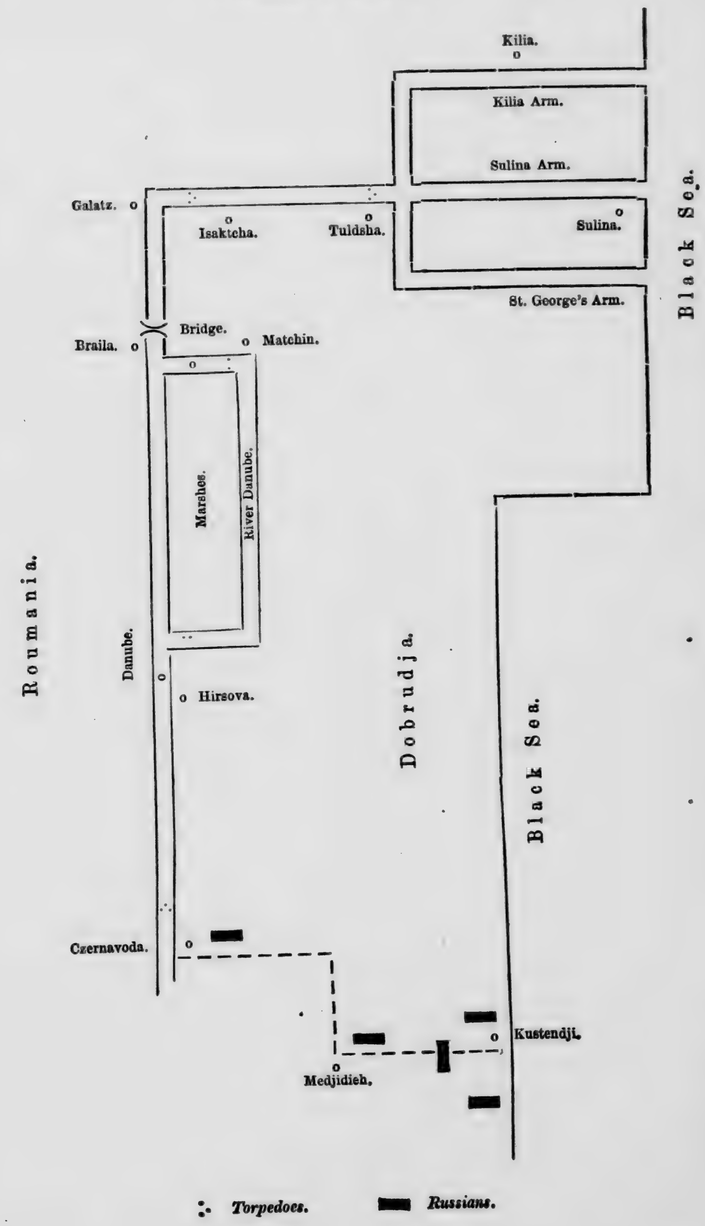
of the sect known as the Old Believers, who emigrated from their own country, and settled here on the banks of the Danube more than a hundred years ago. They still speak Russian, and wear the costume of the Russian peasant; but they were by no means delighted at the arrival of their countrymen. The rest of the inhabitants were Bulgarians and Wallachians. The town had a strange, lonely, deserted, dilapidated look, partly owing to the fact that the houses formerly occupied by the Turkish population were quite untenanted, that the shops had not yet been opened after the previous day's scare, and partly because a Turkish town always has this dreary, tumble-down, unkempt appearance. Looking into the windows of many of the Turkish houses, one saw the empty, abandoned rooms which had so lately been inhabited, and which looked all the sadder and more melancholy because of the thought that came unconsciously into one's mind, that their owners would never come back again. The doors of the mosque were wide open as usual; but the floors, strewn with dirty matting, dust, and litter, showed that it had not been used for many weeks. The verses of the Koran were still written on bits of board or paper, and hung round the walls as though they were expecting the Mussulman worshippers of Allah back again; but high up in the minaret beside it, whence the mullah was wont to call all good Mohammedans to prayer, stood a Russian sentinel.

The Konak, the residence of the Kaimakan of Matchin, was rather a large, fine, well-looking house; but not a stick of furniture of any kind had been left; all had been carried off in the hurried flight of the Turks. The floor of nearly every room was almost a foot deep with papers written in Turkish, torn to pieces and trampled about on the floor. They were the archives of Matchin, the records of titles and deeds of probably all the property in the district. The Turks, it is well known, keep their archives and records on scraps of paper in bags that are hung on nails around the walls, and these papers had been emptied out here on the floor and destroyed for the sake of getting the bags in which they were contained. Everything, in fact, about the place looked as though the Turks themselves had gone away never expecting to come back again.

The Russian soldiers, however, found something which pleased them mightily. This was a room filled half-way up to the ceiling with tobacco, old, musty, and partly rotten, which they carried off in armfuls, like hay, with the greatest glee and satisfaction.

By June 26th, the bridge was completed. It was a fine piece of work, strong enough to carry over the heaviest artillery, and was evidently made to last a long time. The first 1,600 feet from the Roumanian shore was trestle-work, built along over the railway, which before the inundation ran down to the edge of the river, where it was met by the ferry-boat. Part of the railway had been swept away, and even that which remained was still under water, and the bridge some five feet higher than the railway track under it. The bridge was made of immense wooden trestles on benches, exceedingly strong and solid, put down on sleepers which lay along on the ground. Over this was laid a roadway of planks wide enough for one waggon or cannon to pass. At the end of this trestle-work came the bridge proper, not constructed on pontoons, but on immense rafts. The length of this part of the bridge was 1,750 feet, and there were fifty rafts in all. These rafts were composed of long pieces of beautiful timber, whole trunks of trees from 60 to 80 feet long and from 15 to 20 inches in diameter at the large end. Each raft was composed of eight to ten pieces solidly bolted and fastened together, and anchored with strong hemp cables to heavy iron anchors dropped in the bottom of the river. The roadway was laid over this, as over the trestles. At the Turkish end was formerly the village of Getchet, which is a village no more. It was a place of twenty-five or fifty houses, not one of which is left standing. It was first demolished by the Russian batteries to drive away the Turkish outpost that was stationed there; and when Captain Klemenka, the builder of the bridge, began his work, he found it necessary to continue the roadway to the other end, which was for the most part under water, in the best way he could. He simply used the *débris* and rubbish of these houses and walls to make a road, which was built right over the foundation of the houses. In no other way could he get a sufficiently solid foundation on which to build. The road, therefore, went zig-zagging about from house to house, with a piece of bridge here and a piece of trestle-

work there, pieced into the chaussée in the most curious manner. Altogether it was a most creditable piece of work so far, and did Captain Klemenka great honour. Across this bridge, then, General Zimmermann led the 14th corps into the Dobrudja, the Turks falling back as the Russians advanced without offering any serious resistance, and abandoning to them the towns of Isaktcha, Tuldscha, Babadagh, and Hirsova, until they had gained the line of Czernavoda-Kustendji and Trajan's Wall, which, however, they also surrendered after a short resistance, and abandoned it to General Zimmermann.



By this operation nearly the whole of the Dobrudja was in the hands of the Russians by July 19th, and the Turks effectually prevented from pouring in troops or ammunition by way of the Danube or Kustendji, had they even tried to do so; which, however, they did not, preferring to follow the example of Omar Pasha during the Crimean war, and endeavour to effect a diversion in the rear of the Russian army in the Caucasus and Asia Minor. This endeavour was as abortive as that of Omar Pasha's, and from similar causes. A reference to the following sketch C shows the position of the 14th corps under General Zimmermann on July 19. Trajan's Wall, Czernavoda, and Medjidieh, were in his hands, and Kustendji was effectually blockaded. Not only that, but the troops in the Quadrilateral were also prevented from advancing against the Russians before Rustzuk and on the Lom; so that although General Zimmermann was unable to acquire much glory on the field, he contributed in no small degree to the success of the Russian arms further west. To the operations in this direction we must now turn our attention, and show how the second and most important passage of the Danube was effected.

CHAPTER XV.

THE SECOND PASSAGE OF THE DANUBE.

WHILST General Zimmermann was successfully carrying out the plan of campaign in the extreme eastern portion of the field of war, the arrival of the Czar in Roumania, and the increased stir and bustle amongst the troops echelonned along the line of the Danube, showed that an attempt to effect the passage of the river by the *gros* of the army might be expected at any moment. The question was, where? At a distance from the spot, and taking into consideration the length of the line occupied, it might at first sight appear almost impossible to have fixed upon the spots at which the attempt would perforce have to be made. But on the spot, and knowing the peculiarities of the river; and, besides this, knowing at which points the Russians had collected their pontooning material, it was not difficult to say with absolute certainty that the passage would have to be effected at one or two of half-a-dozen points. Still, though this was known, though everybody who had followed the setting up of the Russian troops knew that the passage would have to be effected within a certain distance of Rahova, Nicopoli, or Sistova, it was yet impossible to say at which of these three points the real passage would be undertaken. Owing to the way in which the Russian and Roumanian troops were distributed, and owing, also, to the large numbers of men at the disposal of the Russian generals, an imposing feint might be made at one or two of the above-named points, whilst the real passage was effected at the third. Herein lay the source of weakness in so long a line of defence as the Danube—a weakness which could not be remedied except by the employment of as large a number of men as possessed by the enemy, or the possession of a series of fortresses commanding the intervening spaces—as, for instance along the line from Varna to Rustzuk, with its strong positions at Schumla, Rasgrad, and Silistria. But none of these advantages were enjoyed by the Turks. They neither had the men, nor had they the strong places. The fortresses which they did possess, Widdin and Belgradjik in the west, and the Quadrilateral strongholds in the east, were separated from each other by a wide expanse of difficult

C—*Position on July* 19.

and practically roadless territory, liable to be broken into at any of the points already mentioned. Yet had there but been any tolerable means of communication between these two groups of fortresses, had the Turkish army possessed any degree of mobility, and had there been a sufficient number of men—say 120,000 good troops, besides the garrisons—the Russians might safely have been left to cross at any of the points between Rustzuk and Widdin, whilst the Turkish field army held a central position midway between the two points of support at Widdin and in the Quadrilateral. Or, premising the degree of mobility necessary, Abdul Kerim Pasha's plan of concentrating his army partly in the Quadrilateral and partly at Widdin, in order to march on either flank of the invading army, was not badly conceived. In fact, it was the natural defence; but without sufficient material, no commissariat worthy of the name, scarcely any means of transport beyond bullock-carts, the ultimate result was but too evident, however much, in isolated and unforeseen cases, the onward march of the Russians might be impeded.

Theoretically, Abdul Kerim Pasha's plan was as excellent as it was transparent. It was too simple to bear out the "mystery" with which he enveloped it. His centre was south of the Balkans. Here the Balkan army was supposed to be lying in wait for the Russian army, which, as soon as it was engaged in the mountains, was to be attacked by it in front, whilst Osman Pasha fell upon the Russian right and the Quadrilateral forces upon the Russian left.

Against so transparent a plan it was easy for the Russians to make their dispositions. All they had to do was to protect their right and left with sufficient forces, and send forward their offensive army across the Balkans in sufficient strength to overpower the resistance of the Balkan army.

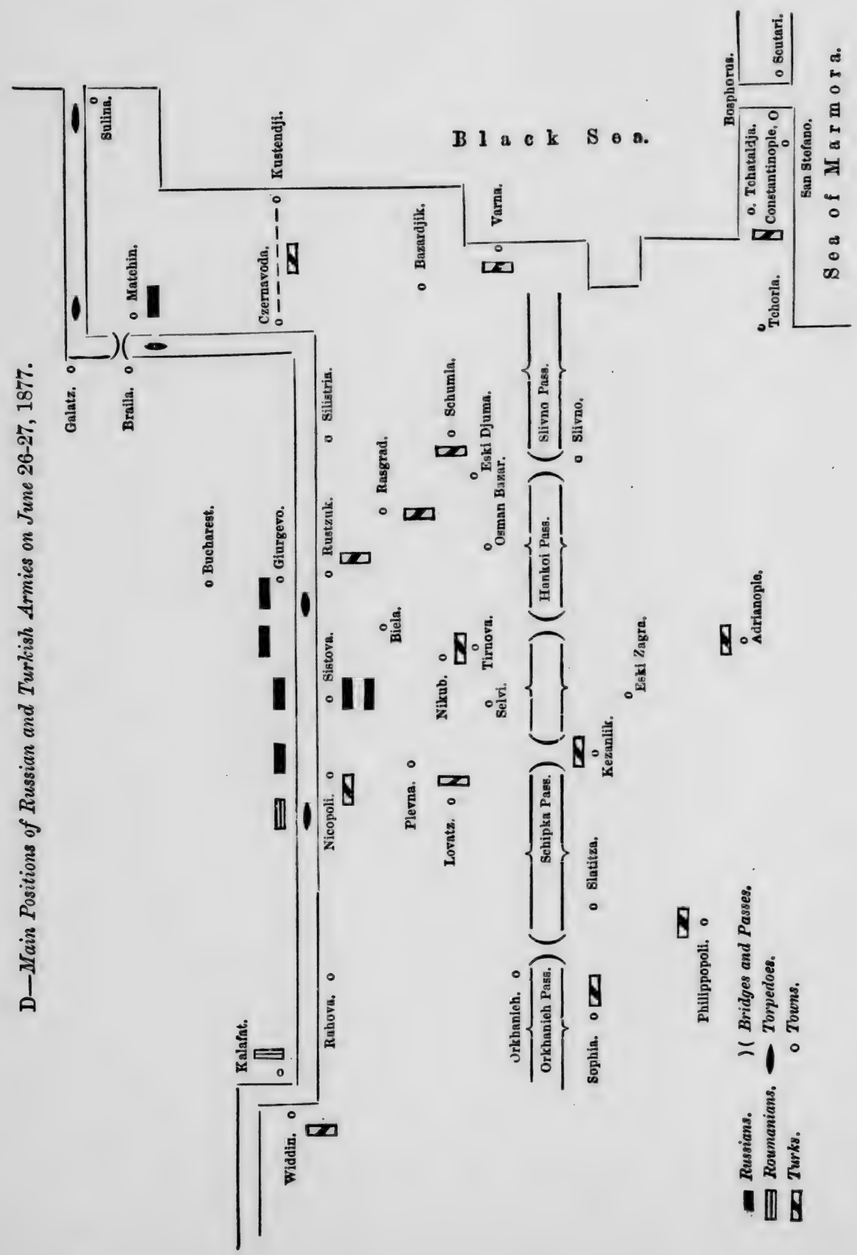
This resistance might have been rendered most formidable, and could have been effected in one of two ways. Which would have been the better, depended upon the number of men and the material at the disposal of the Turks. What this was, is not even yet known, and in all probability never will be. But the alternatives remain the same; and the blame for not adopting one of these two alternative modes of defence—without which Abdul Kerim Pasha's plan had no sense—also remains the same, no matter on whom the blame may rest.

The one mode was to occupy the passes of the Balkans at all the chief points where the passage of an army with its baggage was possible, and to fortify each one, from the entrance of the pass to its debouchment in the plains beyond, with a series of earthworks, trenches, and redoubts in successive lines, upon which the defending force could fall back, step by step, as the invading tide rolled on. By this means a comparatively small number of men might hold a far greater number at bay for a long time, and inflict tremendous losses on the enemy, who would gradually become entangled in the mountains, and run considerable danger from attacks on either flank; and, if these flank attacks were successful, from an attack in his rear.

This plan would in any case recommend itself, unless, indeed, the defending army were to be in such force, and so well provided, that it would be no risk to stake the fortunes of the campaign on a single battle.

In this case the other alternative might have been adopted. This was, to allow the enemy to traverse the passes, virtually unmolested, until he began to debouch with his van-guard into the plains, and then attack in force whilst his rear-guard was still entangled in the mountains. This is certainly the most effective way of defending the barrier formed by a chain of mountains, if the defending force is large enough and warlike enough to engage large bodies of men. The defenders enjoy all the advantage offered by a position in the plain, whilst the enemy is still struggling with the difficulties of the ground he is traversing. Whilst laboriously descending from the heights, and forced more or less to confine himself to one definite road, the defenders can concentrate their forces on any point, and throw them upon the more or less confused mass of infantry, provided the cavalry forming the advanced guard has been effectually thrown back or cut off. But if the defending force is not present in sufficient numbers, and properly handled, then, of course, the disaster is complete, and a strong line of defence lost for ever.

With a small body of men such as the Turks possessed, they should have adopted the first plan of defence, and have contested the passage of the Balkans at every step. Even then they would not have been in a much worse plight than they found themselves after the Russians had gained the crest of the mountains, and they would



have inflicted far greater losses on the enemy.

And, even with a far larger body of troops, they would have done better to adopt this step-by-step line of defence. There would always have been time afterwards to strike a decisive blow if the opportunity offered, and to have routed the wearied enemy in the plains of Roumelia.

Such, in a few words, is what the Turks might have done. We will now let the facts speak for themselves, always keeping in mind the fact, that the attacking army had to penetrate the Balkans and secure either flank from attack; whilst, on the other hand—having lost the opportunity of attacking the Russians in Roumania—the Turks had to drive in both flanks of the Russian army and force back its centre. Unless this could be done, the campaign, north of the Balkans at least, was irretrievably lost. A reference to the following sketch D, shows the main positions of the Turkish and Russian forces on June 26, 27. The advanced posts and isolated detachments of the Turks are not given. They existed in greater or lesser strength at Sistova, Nicopoli, Rahova, Nikub, Biela, and Tirnova, at Osman Bazar and Eski Djuma in the east, and at Plevna, Lovatz, and Selvi in the west. At Rustzuk there were also several gun-boats of the Danube flotilla. To provide against these vessels interfering with the bridges which had to be constructed west of Rustzuk, it was necessary to lay a line of torpedoes in the river. The place selected for this operation was Parapan, a Roumanian village some ten miles west of Rustzuk. The indefatigable Skobeloff was selected for this exploit, which he proceeded to carry out on the night of June 20. The better part of the night was spent in getting down through the marshes and bulrushes to the water's edge, and the real work of laying the torpedoes did not begin until daylight. It was a tedious process, for several islands at this point encumber the bed of the stream; but it was successfully carried out, and for a time Skobeloff and his little party stood on the Turkish bank. The work was interfered with by the Turkish batteries and gun-boats which had steamed up from Rustzuk, and it was in dealing with one of them that Lieutenant Stridlin, in a tiny steam-launch, displayed conspicuous gallantry in driving them off. After his dashing attempt the two gun-boats sheered off for reinforcements, and the work was completed. But after it had been done, and when as yet Skobeloff's men had not got out of range on the island of Gura Kame, a couple of Turkish field batteries arrived at a trot from Rustzuk and opened fire on them from the opposite bank. Their tardy arrival did not indicate much alertness: at the latest the alarm must have been given by daybreak, and they did not fire their first shot until after two. Owing to the presence of the gun-boats on the watch lower down stream, it was thought well to get the little steam-launch through the bulrushes to the bank, and to bring it away on an ox-cart. This operation had to be carried out under the fire of the Turkish field-guns, and the casualties were one officer killed and seven men wounded: in return for which, the river was blocked most effectually and the way barred from Rustzuk westwards, as will be seen on referring to sketch D. The Turks, however, imagined that the Russians had intended to seize the island of Gura Kame, and were not a little elated at their supposed victory when they saw the Russians fall back and retreat to the opposite bank.

These precautions having been taken, a general cannonade was commenced all along the river by the Russian and Roumanian batteries, in order to conceal the real advance, which it had been decided should take place at Zimnitza, opposite Sistova, lying in and among the cliffs which here border the Danube on the south. Below Sistova, for a distance of two miles, the bank remains steep, the heights partially well wooded along their lower slopes, whilst the crest is bare and denuded of vegetation. But at the distance of two miles below Sistova there is a creek in the line of cliff formed by the mouth of a small stream which here falls into the Danube.

Above, and to the right of this creek, was a small camp of Turkish soldiers, fixed there, doubtless, in consciousness of the weakness of the point; and above the camp on the sky-line was a battery of heavy guns. Between the creek and Sistova several cannon were disposed under cover of the trees, and immediately on the proper right of the town was a small open earthwork, armed with a few field-guns. Sistova was an open town, and not garrisoned by more than a brigade of Turkish troops; but then it was not distant more than a long day's march from either Rustzuk or Nicopoli. So much for the Turkish side. About Zimnitza the

D—Main Positions of Russian and Turkish Armies on June 26-27, 1877.

Roumanian bank is high; but between it and the Danube proper, which flows to the Turkish bank, was a broad tract, partly of green meadow, partly of sand, partly of tenacious mud, the whole just emerging from inundation. This flat was cut off from Zimnitza by a narrow arm of the Danube, so that it was really an island. A raised road and bridge leading from the town across the flats, to the landing-place on the Danube, had been wrecked by the floods. It was necessary, therefore, for the Russians to gain access to the flats by a short pontoon bridge. These flats were still in many places under water, or scored by intersecting streams, and studded with impracticable swamps, so that the road through them was difficult and tortuous. They were quite bare, except that at the lower end, exactly opposite the creek on the Turkish side, there was a wood of willows and alders of considerable extent, and capable of affording a good deal of cover. The Danube all along the Sistova position is about sixteen hundred paces wide, and flows very rapidly. The ground on the Roumanian side shows a sloping face to the higher Turkish bank, so that it was impossible to bring troops into Zimnitza unobserved. Hence, probably, the Turkish readiness, such as it was. The attempt was, as far as possible, to be of the nature of a surprise, and it was necessary, therefore, to postpone the dispositions till after nightfall. The Dragomiroff division had the post of honour, and was expected to make a footing on the Turkish side by early morning. The Mirski division, in support, was to make a night march from Lissa, half-way between Zimnitza and Turn-Magurelli, and be in position at Zimnitza at 7 A.M., to follow the 1st division across in the event of its success. In the event of failure, it was to take up the fighting, and force a passage at all sacrifices; for the Archduke Nicholas had announced that the river should be crossed at Zimnitza, cost what it might.

With the darkness General Dragomiroff had begun his dispositions. The first work was to plant a row of field-guns all along the edge of the flats, to sweep the opposite banks. This was done while his infantry was being marched over the flats down into the cover of the willow wood. The darkness and the obstructions were both so great that all was not ready till the first glimmer of grey dawn. There was no bridge, but a number of pontoon boats, capable of holding from fifteen to forty men each. These were dragged on carriages through the mud, and launched in the darkness from under the spreading boughs of the willow-trees. The troops embarked, and pushed across as the craft arrived, under the command of Major-General Yolchine, whose brigade consisted of the regiments of Valnisk and Minsk, the 53rd and 54th of the line. The boats put off singly, rowing across for the little creek; and later on the little steam-tug *Annette* was brought into requisition. But the Turks were prepared as much as lay in their power. Their few cannon at once opened fire on the boats, on the hidden masses among the willows, and on the columns marching across the flat. Nor was this all. From the slopes above the creek there came at the boats a smart infantry fire, whilst the Turkish riflemen were holding the landing-place. Yolchine, however, succeeded in landing his men, and bade them lie down in the mud. Several were down previously with Turkish bullets. He then opened a skirmishing fire to cover the landing of the boats that followed. One by one these landed their men, who followed the example of the first boat-load. At length enough had accumulated; and when Skobeloff arrived, Yolchine bade his men fix bayonets, stand up, and follow their officers. There was a rush and a cheer that rang louder in the grey dawn than the Turkish volley that answered. But that volley was not fired in vain; for though Yolchine's skirmishers followed them doggedly some distance up the slope, they were unable for some time to make any way. Incessantly, however, the craft moved to and fro from shore to shore. The Russian guns had at once opened when the Turkish fire showed that there was no surprise; but they could not silence the Turkish guns, whose shells kept falling in the water, whistling through the willows, and bursting among the columns on the flat. One shell from a mountain gun fell into a boat containing two guns, their gunners, and the commandant of the battery. The boat was swamped at once, and all on board perished. This was the only serious casualty; but numerous Russian soldiers were falling on both sides of the river. Nevertheless, the work was going steadily on, and soon after seven, the whole brigade of Yolchine had reached the other side, and Dragomiroff himself had crossed. The Turks, however, would not give in; and in spite of the artillery and musketry

fire poured in upon them, they clung to their posts and their guns with wonderful staunchness, amidst clouds of dust thrown up by the shells which burst around them. Nor were their single pieces among the trees wholly quiet. Shells dropped fast among the Russian troops on the flat, and made the ambulance-men hurry about with brancards, or plod towards the ambulances with their heavy blood-sodden burdens.

But the weight of metal commanded by the Russians, and the great superiority of numbers, soon began to tell against the handful of Turkish troops; and whilst General Yolchine gradually pressed them back, Prince Mirski began the passage with his division, consisting of the 33rd, 34th, 35th, and 36th regiments, and soon after three P.M. on June 27th, the Russian troops crowned the lower crest of the hills south of Sistova, and occupied the town itself; the Turks falling back partly to Nicopoli, and partly to Tirnova. The losses of the Russians amounted, according to the official returns, to 240 killed and 410 wounded.

Now, although the garrison of Sistova had not been surprised by the sudden attack of the Russians, it is certain that the Turkish commanders-in-chief had been deceived. Whether Abdul Kerim or Osman Pasha is to blame for having been thus misled, there are as yet no data to show. But it remains a fact that the Turks expected the real passage to be effected at Turn-Magurelli, opposite Nicopoli; and it was in the neighbourhood of this place, between it and Rahova, that Osman Pasha was lying in wait with the *gros* of his army.

The report that the passage would be effected at Nicopoli had been so persistently spread that it could not but have come to the knowledge of the Turks, who, as we have said, concentrated a large number of troops at this point. The Russians, learning this, still further kept up the deception by making a serious demonstration against Nicopoli, which they would have changed into a real attack had a fair chance of success offered; so that up to the last moment it was uncertain which point would be the real crossing—Zimnitza or Nicopoli. The emperor and his staff, and the grand duke and his staff, went ostentatiously to Magurelli—a fact which soon became known to the Turks, who took it, together with other indications—the building of a bridge, collecting a large number of boats, &c.—as evidence that this would be the real point; but the Russian forces had been so placed in the villages in the neighbourhood, that they could with equal ease fall upon Sistova or Nicopoli; and they had besides collected a large number of boats at the mouth of the Aluta, a little way above Magurelli; and as there was a spot very favourable for passing by boats, the feint would have been turned into a real attempt had it not been discovered that the Turks had already concentrated 30,000 men at this point under Osman Pasha, thereby necessarily weakening Sistova.

That the Russians meant to cross at Nicopoli had they been able, and had not the passage at Sistova been successful, was also evident from their having commenced the construction of a bridge of very much the same kind of work as at Braila, with the exception that the trestle-work and road were constructed on the Roumanian side instead of on the Turkish. The materials for the bridge were collected, and on Wednesday night, at the same time as the passage at Simnitza, a demonstration was made which turned out to be only a demonstration, but which had all the appearance of a real attack. A fierce cannonade was begun in the afternoon, which lasted till nightfall, when there was a slight pause; after which the firing was recommenced with redoubled fury. Soon the darkness was lit up by the red flames of burning houses on the opposite shore of Nicopoli, of which there were several standing in a row, each looking in the distance like an angry burning coal; while there hung over the town of Turn-Magurelli, what first appeared to be a monster comet with its head on the horizon, and its tail reaching to the zenith, extending across the sky in a broad flashy white light. It was an electric light employed by the Russians to light the other shore, show the position of the Turks, and thus enable the Russian fire protecting the passage to be properly directed. Its pure white light formed a strange contrast with the red glare of the burning houses.

As the night wore on, the roar of artillery and the boom of guns became louder and louder, until the whole valley of the Danube rang and echoed with the contending fire of the Russians and Turks, the Russians firing from three batteries above the town, composed, two of mortars, and one of heavy breech-loading 24-pounders, whilst the Turks answered with might and main, supposing they were preventing the passage,

while this passage was being quietly effected at Zimnitza with scarcely more difficulty than at Braila. Still some attempt was made to throw across a bridge to the right in front of Nicopoli, which bridge the Turks promptly destroyed; and, at the same time, a move also was made above the town, as if to cross in force in the boats collected there. The corps marched down to the riverside, and at twelve o'clock four batteries drove down to the road opposite Nicopoli, a considerable amount of infantry having preceded them earlier in the evening. But all resulted in nothing. The Turks showed in such force on the opposite side, and were evidently so well prepared there, that the risk was deemed too great, too serious a sacrifice of life being required to effect a passage. It was thus decided to wait the result of the affair at Simnitza. That having proved successful, the 9th corps received orders to march from Turn-Magurelli to Zimnitza, only a few troops remaining behind to protect the positions and batteries. A footing on the Turkish bank having thus been gained at a remarkably small expenditure of life, the construction of a bridge at Sistova and Zimnitza was at once proceeded with. This operation was not disturbed in any way by the Turks, except by the commander of one of the Turkish gun-boats which had succeeded in making its way up the river, and gave the Russians a good deal of trouble, showing an amount of activity and energy very unusual with the Turks, continually shelling the Russian batteries, and destroying the boats. The Russians accordingly determined to destroy it.

Four torpedo boats were prepared, and sent against the gun-boat. Hiding behind an island, they laid in wait, and when the vessel was steaming past they suddenly darted out from their hiding-place, and bore down on her in broad daylight. This vessel, it soon became evident, was handled and commanded in a very different manner from others with which the Russians had had to deal. With wonderful quickness and skill she was prepared for action, and, nothing daunted by the fate of others, made a successful defence against her four terrible enemies, a defence of which the Russians spoke with the greatest admiration. Her commander began by likewise thrusting out torpedoes on the end of long spars, thus threatening the boats with the danger of being blown into the air first, at the same time opening a terrible fire on them with small arms and mitrailleuse. He besides manœuvred his boat in a most skilful manner, with a dexterity and address which, with the torpedoes protecting, made it impossible for the Russian boats to approach sufficiently near. He besides tried to run them down, and very nearly succeeded in doing so. The reason soon became evident. The commander was a European, and, as the Russians believed, an Englishman, who directed the movements from the deck. He was plainly visible all the time, and was a tall man, with a long fair beard parted in the middle. He stood with his hands in his pockets, giving orders in the calmest manner possible.

The torpedo boats continued their attempts for more than an hour, flitting round the gun-boat and seeking the opportunity to get at her, but without success. The gun-boat was equally active in trying to run them down, avoiding a collision by quick and skilful movements, backing and advancing, turning, and ploughing the water into foam as she pursued or avoided her tiny but dangerous adversaries—a lion attacked by rats. At one moment one launch, in rapid manœuvres, found itself between the gun-boat and the shore, with no great distance between them. The gun-boat's head was in the other direction, but her commander instantly began backing her down on the torpedo boat, with the intention of crushing it against the bank. Just at this moment the engineer of the launch was wounded. There was some confusion and delay in starting the engines, while the current carried her head aground in such a position as to render escape impossible. One of the crew sprang out into the water and pushed from the ground, while another started the engines just in time for her to escape; but the shave was very close. One Russian officer sprang ashore, and seeing the captain of the gun-boat coolly standing on the deck with his hands in his pockets, emptied his revolver at him, three shots, at a distance of not more than forty feet. The captain of the gun-boat, in answer, took off his hat and bowed, not having received even a scratch. Later, however, the gallant fellow seems to have been killed or wounded, for he suddenly disappeared from the deck. The gun-boat immediately afterwards retired precipitately from the scene of action.

Since that time she kept out of the way like the others. The Russians supposed that she was no longer commanded by the

same man. The fight was conducted with wonderful skill on both sides. The Russian boats were commanded by Lieutenant Niloff, and the attack was a most daring and tenacious one. His loss was only four or five wounded, in spite of the incessant fire of the small arms and mitrailleuse which poured into them. This shows how well-handled the boats were. They were, however, considerably damaged by the mitrailleuse fire. No attempt was made by the commander to use his guns, he evidently believing it impossible to hit such a small and rapidly moving object as a steam-launch. That the boats should have suffered so little loss in one hour's fight shows how difficult it is to hit these launches. They were fitted out in the same manner as those which blew up the monitor at Braila; but this attempt, as well as the one at Giurgevo, was made in broad daylight, neither of which succeeded. This vessel was soon afterwards surrounded by torpedoes, as well as all the others on the Danube.

The crossing having been successfully effected, the Russians seemed to think that the best part of their work was already done, and exhibited a carelessness and *nonchalance* that eventually cost them dearly. Having driven the Turks from their first position, it was an imperative duty, at all cost, to keep sight of the retreating enemy, to ascertain their line of retreat, to learn whether they were receiving reinforcements, and what were the indications of their line of action, This course was not pursued, and it was not before June 30th that young Skobeloff, with a sotnia of Cossacks, went on a scouting expedition to gather intelligence of the whereabouts of the Turks. This tardiness was all the more injudicious when it is remembered that the force across the river had opposition on either flank, Rustzuk and Nicopoli. An advance was rendered precarious by the consequent threatening of communications, and in the absence of a completed bridge there was no line of retreat except by the hazardous recourse to boats. It is possible to despise an enemy too much. The minor arrangements, too, of the Russians were somewhat faulty. Access from Zimnitza to the place of embarkation was by a difficult track, which was not a road, down the bluff, over a single pontoon bridge, and by a tortuous sandy path through swamps and shallow patches of inundation on the flats. No attempt was made to better these imperfect communications. The Germans would not have occupied a similar position for twenty-four hours without cutting half-a-dozen practicable roads down the face of the bluff, throwing at least two bridges over the branch of the stream, and making a good, straight, and firm track across the flats. They would have thrown up and fortified a bridge-head on the farther side. Their Uhlans would be in view of Rustzuk on the one side and Nicopoli on the other; their mass would have been on its march toward whatever objective points might have been decided, instead of coquetting with time at a season of the year when every hour was valuable, if the campaign was to be triumphantly ended before the winter. The Germans would not have taken three days to build a bridge, the appliances for which were all prepared and at hand. Their troops on the other side would not have been living from hand to mouth, so that a general's dinner had to be sent to him from his baggage waggon on the other side, but they would have accumulated in Sistova a depôt of provisions and ammunition, and surrounded this virtual base with a cordon of fortified redoubts.

But most culpable of all was the neglect to ascertain the movements of Osman Pasha and his 30,000 to 40,000 troops. It was assumed—why, it is impossible to say—that having heard of the successful passage of the river at Sistova, Osman Pasha was making his way by a circuitous route through the interior towards the Quadrilateral.

Far from doing this, Osman Pasha, leaving a strong garrison in Nicopoli, called up the rest of his forces and fell back upon Plevna, where he at once commenced to entrench himself, whilst the Russians at once pushed headlong forwards as soon as sufficient men had crossed the river. Owing to a storm, which sunk many of the pontoons, the free-boards of which were too low, the bridge was not completed till July 2nd; but by the end of the second week in July, the 8th, 9th, 12th, and 13th corps had all effected their passage across the river, the 11th and 4th still remaining on the Roumanian shore, as well as the Roumanian corps at Kalafat and opposite Nicopoli.

On July 1st, the Russians occupied the town of Biela, on the Yantra, and on the high-road to Rustzuk. On the 7th of July, they drove the Turks out of Tirnova, and, still pushing forward into the Balkans, occupied the villages of Drenova and Gabrova

on July 10th. On the 12th of July, the Grand Duke Nicholas took up his head-quarters at Tirnova, and was followed by the greater portion of the 8th corps; whilst Prince Tcherkasski, who was entrusted with the administration of Bulgaria, also accompanied the grand duke to Tirnova.

These movements had been prepared by General Gourko, who had been entrusted with the advance guard of the 8th corps, consisting of six battalions of riflemen, the Bulgarian legion—for local purposes—and eight regiments of cavalry with about forty guns. With these forces General Gourko cleared the way to Tirnova and Gabrova, which they held till relieved by other detachments of the 8th corps, who also extended their outposts on the right, and occupied Selvi and Lovatz.

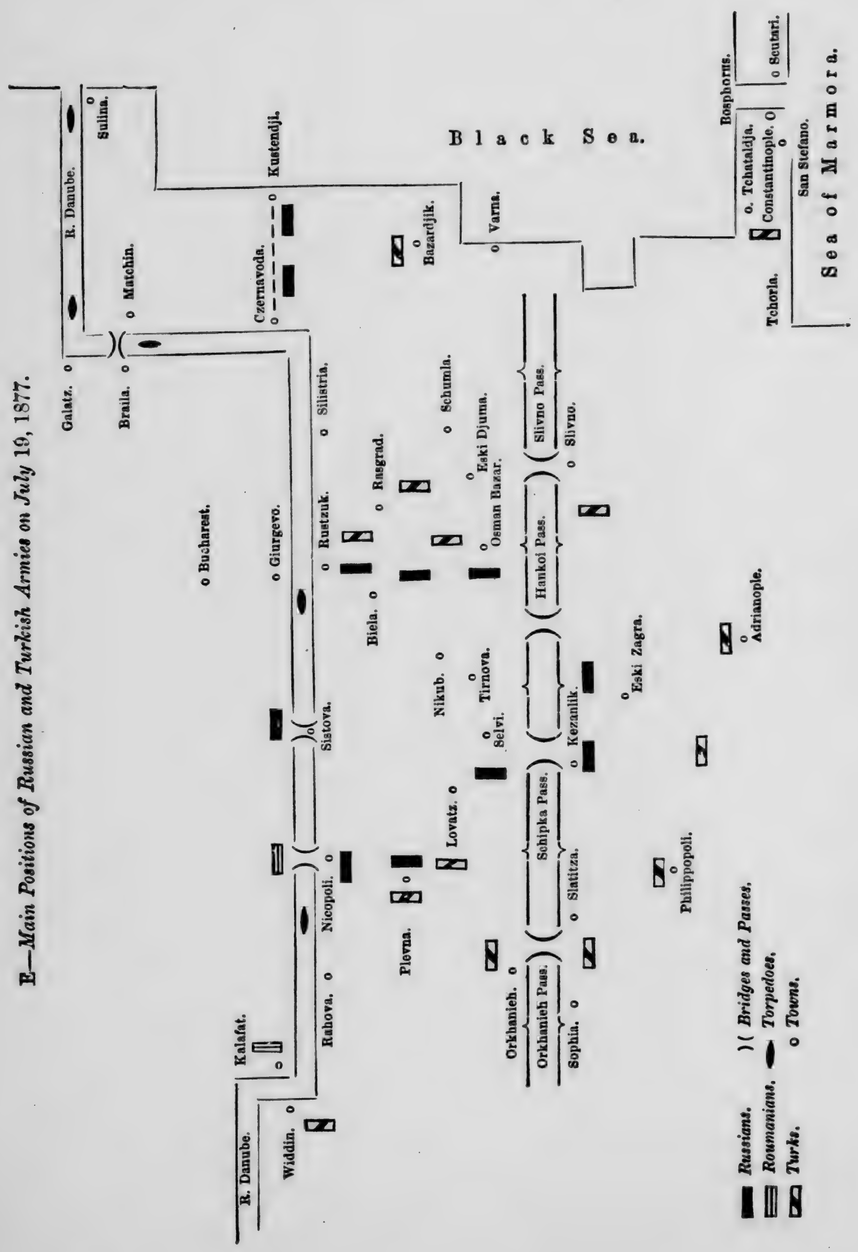
From Tirnova General Gourko turned south-east, crossed the Hankoi Pass, made a raid upon Yeni Sagra, scoured up the Tundja valley, occupied Kezanlik on July 17, pushed northwards over the Schipka Pass, and joined hands with Prince Mirski on July 19; the Turks holding the pass having escaped during the night, when they found themselves taken between two fires.

Meantime the 12th and 13th, and, later on, part of the 4th corps, were taking up their positions on the Yantra, and between the Yantra and the Lom, towards Rustzuk and Rasgrad, under the command of the Czarevitch and his brother Vladimir.

On the other side, to the west, it was deemed necessary to seize Nicopoli. This task was entrusted to General Krüdener, who commanded the attack on July 13, and forced Hassan Pasha to capitulate on July 16, after a most obstinate resistance. Six thousand prisoners, two pashas, forty guns, and two gun-boats fell into the hands of the Russians. Elated with this success, and hearing that large bodies of Turkish troops were marching on and into Plevna, General Krüdener sent General Schilder-Schuldner to take the town. Schilder-Schuldner arrived before Plevna on July 19, on the same day that General Gourko had joined hands with Prince Mirski in the Schipka Pass, and whilst Russian cavalry were scouring the country between Adrianople and Philippopoli. On the same day the army of the Lom advanced to Pirgos and Kadikoi, close to Rustzuk, the Grand Duke Vladimir even pushing on to the railway from Rustzuk to Varna, and blowing up a bridge and part of the line. And on July 19, also, General Zimmermann drove the Turks back across the line Czernavoda-Kustendji, where he took up his position along Trajan's Wall, and swept the country from the Danube to the Black Sea.

In truth, therefore, the 19th of July was a memorable day for the Russian armies. By that day—say within three weeks—they had effected three passages of the Danube—at Braila, Zimnitza, and Turn-Magurelli; they had crossed and re-crossed the Balkans, and planted their standards in the plains of Roumelia; they had taken Nicopoli; they had pushed their advance eastwards almost under the very walls of Rustzuk; the Dobrudja was at their mercy; and they had hemmed in Abdul Kerim and his armies, east and west, in the Quadrilateral.

A comparison of the following sketch E with sketch D, shows in a striking manner the impetuous advance of the Russian forces. They carried out the first part of their campaign to the letter. They had elbowed their way east and west admirably, and had left a broad lane north and south for their choicest troops to penetrate through the open gates of the Balkans into Roumelia. All they now had to do was to defeat the forces in the Quadrilateral, to annihilate Osman Pasha, and push forward in triumph to Constantinople.



But before proceeding to the second act of the great drama, we will fill-in the general picture we have given with the details, to show how so much was accomplished in so short a time.

It is true much was accomplished, but it was against very little. The tempest was very violent, but it only swept over frail, bending reeds. A bright swelling bubble was blown at Sistova, which expanded and expanded across the Balkans, across the Lom, and across the Vid, till it grew thinner and thinner, and suddenly burst at Plevna—burst and vanished into thin air like a glorious dream.

Four distinct operations had to be carried out for the Russians to gain the position set forth in sketch E.

1. The Dobrudja had to be occupied to secure the ports on the Black Sea and the mouth of the Danube, in order to prevent the Turks from using them, and also in order to turn the Turkish position in the Quadrilateral.

This first operation, as we have seen, was successfully carried out by General Zimmer-

E—Main Positions of Russian and Turkish Armies on July 19, 1877.

mann, because he met with no serious opposition.

2. The left flank of the advance had to be protected.

3. The right flank of the advance had also to be protected.

4. The advance southwards had to be conducted rapidly, and in force, whilst the right and left wings fully engaged the Turkish field armies north of the Balkans, and prevented them from going to the assistance of the Roumelian troops against the advance, whose objectives were Adrianople and Constantinople.

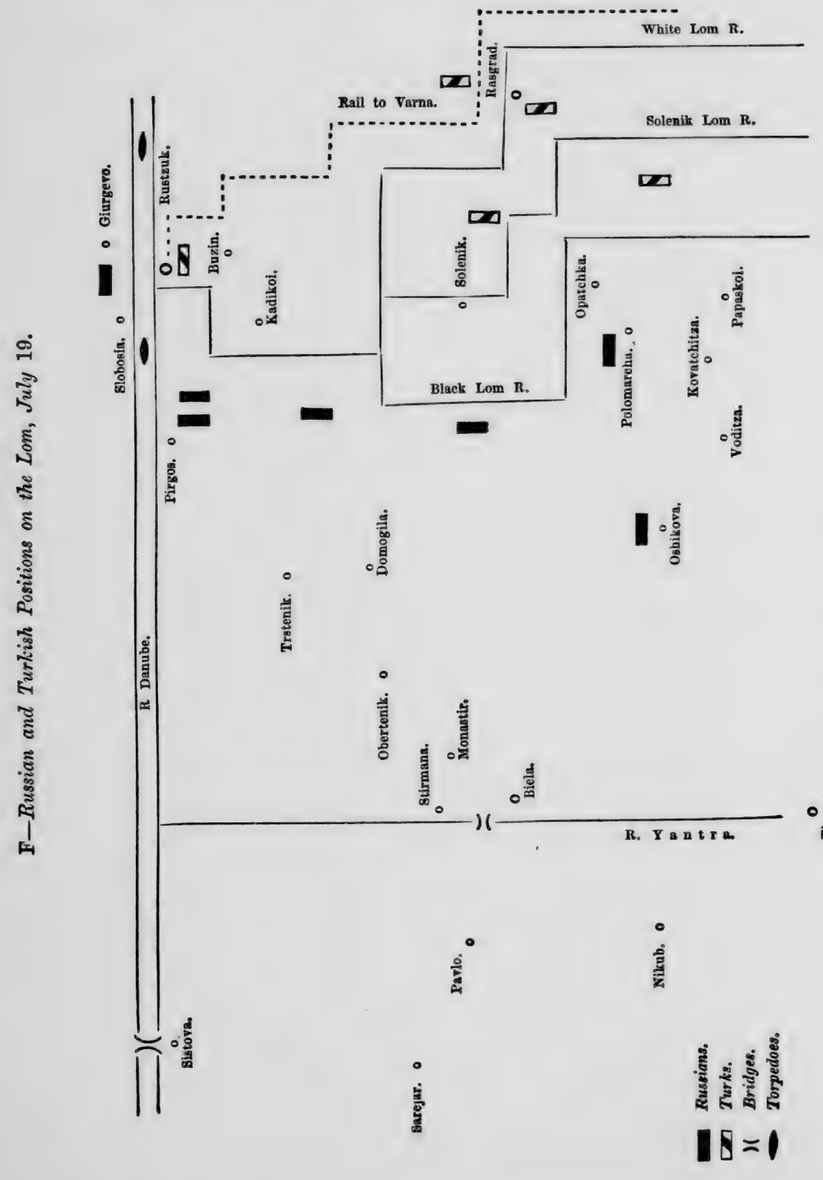
All this, down to Kezanlik, was apparently accomplished on July 19.

The Grand Duke Nicholas had successfully followed the road cleared for him by General Gourko up to the foot of the Balkans, and the advance guards were eagerly awaiting his appearance in the Roumelian plains.

The Czarevitch had set up his barrier against the Turks in the east, and was eagerly awaiting the signal to advance and invest the fortresses and capture all the Turkish armies in a trap.

General Krüdener had seized Nicopoli, and had bidden General Schilder-Schuldner to go up and take Plevna.

Such was the state of the bubble on July 19th. We will now show how it was blown, and who blew it, and what disastrous consequences resulted from it.



CHAPTER XVI.

THE RUSSIAN ADVANCE ON THE LOM AND OSMA.

THE Czar having taken up his head-quarters at Zimnitza, General Arnoldi was sent forward with his cavalry to prepare the way for the advance of the 12th corps in the direction of the Yantra, Lom, and Rustzuk. An idea of the scene of operations may be gathered from the following sketch F, which covers the field between Sistova, Tirnova, Rasgrad, and Rustzuk.

The force commanded by General Arnoldi consisted of the Oldenburg regiment of Dragoons (the finest dragoon regiment in the Russian service), and the regiment of Belgarski Uhlans: he had with him only the dragoon regiment, the Uhlans being a short distance behind. With the dragoons he had the divisional artillery, consisting of two horse batteries. The colonel of the dragoons, who rode with the general, was a very young man, barely thirty, Colonel Bilderling, who owed his early promotion entirely to merit. General Arnoldi had served many years, and had retired from active military employ, but came back in answer to the summons of the war.

The brigade rode away up the green slope and over the breezy uplands, where the yellow barley waved in the wind. The general's commission was to occupy the town of Biela, where it was believed there still remained some Turkish soldiers. The Hussar regiment was still in front, but it was to halt in support at Kosna, while the dragoons and artillery went on against Biela. The time passed swiftly, although the pace was slow and the route circuitous, for the force had to follow two sides of a triangle, through Sarejar and Pavlo, in order to strike as early as possible the chaussée between Rustzuk and Tirnova, on which Biela stands. The relative position of these places will be seen on referring to sketch F; the high-road from Rustzuk to Tirnova running by way of Biela and Nikub, past the villages set down in the sketch. On the way they passed the beautifully situated village of Burunli, lying in a deep grassy hollow, where the Bulgarian inhabitants crowded out with joy in their faces and words of welcome on their lips, carrying brimming pitchers of clear cold spring-water, which in the boiling heat was preferable to nectar. Here in a camp, knee-deep in natural grass, two squadrons of the hussars were left behind, and in half-an-hour more the main force was on the chaussée and in sight of the swift-flowing stream of the Yantra, overhung by dark umbrage. A patrol galloped out, and cut the wires of the telegraph line running along the chaussée, thereby interrupting telegraphic communication between Rustzuk

F—*Russian and Turkish Positions on the Lom, July* 19.

and Tirnova, Nicopoli, Widdin, and indeed the whole north-western section of Bulgaria. If General Arnoldi had served in the American war, he might have learned to tap the wires instead of cutting them, and then perchance he might have gained some intelligence, which was wanted badly enough. But in all probability the Turks had abandoned the use of the line before the patrol cut the wires. At the junction with the chaussée, between Pavlo and Biela, all the hussars, except the advance guard, which still continued in front, were left behind, and the way then lay up the steep slope of a ridge which shut out the view beyond. As they topped it, the rich valley of the Yantra, waving with golden barley, lay at their feet, intersected by the sparkling river; and in the mouth of a little cross-valley on the other side of the Yantra, were the red-tiled roofs of Biela half hidden in foliage. Beyond the river, flanking Biela, on its proper right, rose the steep marl heights, with abrupt grass-grown slopes beyond, of a position which at once arrested the eye of every trained soldier in the little band. If it were defended the carrying of it would cost dear. On the Russian side, on the gentle slope, there was no greater cover than that afforded by a casual stook of barley. Then the river would have to be crossed—it would be necessary to search for a ford—and then the marl heights would have to be stormed, for there was no way of turning the position. It was a sight to stir the deepest interest—the loveliness of the scene, the gleaming river with the overshadowing masses of dark verdure above Biela, the dusky red roofs recessed in the little valley, the golden slopes, the country village of Stirmana across the river on the left, where the marl steeps softened into green slopes—all this delighted the eye of him who looked at it in the spirit of the love of a sweet scene. And then how different the feeling of him who looked at it with a soldier's eye! If there were Turks on that crest opposite, ere it be taken the barley would wave over many a corpse; the silvery sheen of the Yantra be dulled with blood; and the dazzling white marl be dabbled with many a red stain. The umbrage might hold sharpshooters; the pretty Stirmana might be a network of barricades; the bridge down there might be mined; among the red-roofed houses might be masses of infantrymen; and behind these dark objects on the slopes might be Krupp cannon.

But all these fears, so poetically described by the correspondents, were groundless. For a while General Arnoldi and his staff took a long steady look at it, all standing there on the little conical knoll on the ridge—a knoll on which a battery had begun to be built evidently not a week before, and a flanking shelter-trench dug. General Stahl von Holstein had come on thus far with General Arnoldi, and the two held some talk apart, and then the former went off to have his hussars at hand for support if need should be. And so Arnoldi, taking his place at the head of the column, gave the word to march, and the dragoons began to descend the straight road leading through the barley-fields to the bridge. Till then it seemed that the duty of scouting had been very much neglected, looking at the fact that the men were marching through a country presumably hostile, and with an enemy known to be close. Till then Arnoldi and his staff had constituted the advance guard; there were no flankers, and patrols were not thought of. But now the old soldier pulled himself together; out on the slopes, to right and to left, galloped flankers to peer down into the side valleys. A patrol trotted along the road in front. There was a cloud of dust, and three Cossacks came galloping up from the right front. They had poked their way across the river, but neither into the town nor on to the heights. The only information they brought was that some Turks were reported near Biela; and their only capture was a Turkish pony. Suddenly a wild scared Bulgarian, galloping *ventre à terre*, with a gun carried by the muzzle across his shoulder, came with the intelligence that there were some Turks plundering in Stirmana, whence he had come; he could tell nothing about the heights or about Biela. Half-a-dozen Cossacks were sent scouting away to the left towards Stirmana, led by the wild Bulgarian with the gun over his shoulder. He shouted and gesticulated with the maddest energy; he was in a paroxysm of furious rage and crazy terror, and yet he rode straight enough on his rat of a pony. Sweeping down at a hand gallop, riding straight through the standing barley, and taking the banks and ditches at a stride, still the Cossacks were not quick enough for the light-heeled rascals of Bashi-Bazouks; and as they dashed into the stream, all they caught sight of was a very voluminous pair of blue unmentionables vanishing round the corner of a

house. The river turned out too deep to ford, and only one Cossack swam it; the others respectfully declined. So they went about; but as they were cantering back, one single gun-shot sounded from above the village, as if in mockery.

Still it was reported that some Turks were prowling about the heights, but not in force, and the informants could not tell precisely of their whereabouts. Colonel Bilderling then rode forward to the bridge, but only found by the wayside there a company of Bulgarian people who had come out to welcome their deliverers. At their head stood their venerable priest, and then commenced the obligato performance of sobbing and tears and kissing of hands, peculiar to the tender-hearted Russian and the meek Bulgarian.

Ascertaining from the people that the Turks had abandoned the town, General Arnoldi sent forward a detachment of dismounted dragoons across the bridge, to scour the opposite heights, where a few shots were fired to keep up the idea of war, and a skulking Turkish peasant taken prisoner. Outposts were then set up round and in part of the town, which was occupied in the early dawn, when the rest of the force swarmed into the place in the persistent search for schnapps. They further diverted themselves by hunting for hiding Turks, breaking open the shutters of suspected houses in these endeavours. Some four or five were thus captured, and conveyed as prisoners to the Konak. In Biela the Sistova example had been little followed. Few Turkish houses had been wrecked or plundered. There were comparatively few Turks in the place: the great mass of the population was pure Bulgarian, and painfully eager to display the utmost hospitality towards their new friends.

All this took place on July 5th; but for two days General Arnoldi was left without any infantry to support him. He was not a little troubled in consequence. He had expected infantry to have arrived for his support long before this time; the infantry had not come, and in his front the Turks were showing in very formidable force, and threatening an immediate attack. This, with a handful of cavalry, and his flank uncovered, he could not sustain, and he had withdrawn his camp and baggage and the mass of his brigade behind the Yantra River, which he had crossed the day before, and there awaited the arrival of the infantry, maintaining a sort of attitude of defence on the heights, with a chain of pickets and vedettes, but having no other intention or alternative but to fall back immediately he should be attacked. He had definitely resolved, with perhaps an excess of caution, to withdraw altogether behind the Yantra for the night, if the supporting infantry should not have arrived by five in the afternoon, when indeed some of the 33rd division arrived on the heights, and somewhat relieved his mind.

Comment on this cavalry advance on to the heights above Biela cannot be of a favourable character. The advance of Arnoldi's brigade, unsupported by infantry, could effect no good purpose that was not open to half-a-dozen scouting parties, each consisting of an officer and a few men; and it might have been followed by very unpleasant consequences. The advance of Arnoldi, while his dispositions by no means included the protection of the town of Biela, even while he camped on the heights close to it, compromised that place in a manner which its inhabitants would have had occasion bitterly to realise, if the retreat, which he regarded as almost inevitable, had actually been carried out. The Turks had quitted Biela without working there any injury; but had they come back—and if their pressure had led Arnoldi to retire, they would of course have come back—they would hardly have practised the same moderation as before. They would have found some Turkish houses wrecked; they would have found the mosque not quite in the state in which they had left it; they would have learned that the Bulgarian inhabitants had hailed the Russian troops with enthusiasm, and guided Russian soldiers in their hunt after Turks who had remained behind. Turks are certainly human, and it would have demanded more than human self-restraint on their part if, under the circumstances, Biela should not have had reason to mourn the hour that Arnoldi's cavalry rode over the bridge, without first making sure that infantry supports were within easy distance. Thus their advance compromised unjustifiably the safety, if not the existence, of a friendly town.

But Biela later had occasion to realise that in war-time friends are often nearly as cruel as foes. Indeed, a cynical inhabitant of Biela might say that he had found friends more cruel than foes, for the Turks had left the place without doing any mis-

chief. At five o'clock on July 7th, when the infantry of the 33rd division arrived on the heights, Arnoldi, leaving his forepost line standing, withdrew to his camp on the Yantra, and the infantry and artillery took up the position on the heights he had occupied, and also on others covering the town. Biela was thus safe from the Turks; but there was nobody to defend them from the Russians except the special correspondent of the *Illustrated London News*, Mr. Villiers, who had taken up his quarters in the town.

About eight o'clock in the evening a number of infantry stragglers were buying bread outside a shop near Mr. Villiers' quarters. They were not supplied with the quickness they desired, so they broke into and plundered the shop. This was witnessed by Villiers and a Russian cavalry officer who was sitting conversing with him at the window of his room. The officer at once went and drove away the plunderers, thrashing them soundly with the flat of his scabbard. Another cavalry officer joined the first; and the two, with Mr. Villiers, walked down the street. A Bulgarian came up to them, wringing his hands, and complaining that his house was being robbed. They heard a tumult near, and shrieks of women, and as they approached a number of soldiers jumped out from windows, and through doors, laden with portable loot. The officers at once chastised these fellows with all imaginable vigour, and each took two soldiers prisoners; of the onlooking soldiers they organised an informal police patrol, and all plunderers subsequently caught they handed over to this body, after having previously thrashed them soundly. The officers took their prisoners, who were infantrymen, to the cavalry camp, whence they were forwarded to their regiment. The officers in the cavalry camp, who were made aware of the circumstances, expressed great anger at the conduct of the soldiers; but the precaution was strangely neglected of sending protecting patrols into the town, probably because no cavalry soldiers were concerned in the mischief.

About one o'clock, Villiers, sleeping in his room, was roused by the noise of woodwork being smashed in the street outside, Looking out, he saw by the light of the broken pieces of blazing wood carried torchwise by the soldiers, that the work of plundering was going on apace to right and to left. Women were shrieking, not so much because of any violence offered to them, but because of the ruin to their property. Men were revelling in a liquor-shop which had been broken open, and wine was running from the casks. On the other side of the way a butcher's shop was being cleared out, fellows tearing at the meat to make it part. The women of the house came into the room occupied by Villiers, and with tears besought his protection. But what could he do? There was no authority in the place—no man to whom appeal could be made. All was license, and Villiers sat at the window, for a long time expectant of an attempt to break into the house. At length came the challenge, "Is that a Turkish or a Christian house?" The servant replied in Russian that it was a Christian house, and occupied by gentlemen accompanying the army. The soldiers no further attempted to gain an entrance, and apparently went away. But presently a knocking was heard below, and the people of the house said they were breaking into the cellar, which, as in most Bulgarian houses, had its opening directly into the street. Presently there was a wild tumult about the door and a hammering for admittance, which quickly brought Villiers down to the door. Then came the comic element in a scene that was surely grim and lurid enough. The proverb that ill-gotten goods never prosper had come home to the Russian soldiers with more than ordinary swiftness. As Villiers opened the door, there stood four of them in the torchlight, clamouring wildly, with bottles in their hands, a strange blackness about their lips, and a curious smell pervading the group, which was certainly not the *bouquet* of any potable fluid known.

The owner of the house had in his cellar a number of bottles full of vitriol, used for the purification of wool in the manufacture and dyeing of woollen stuffs, which was the man's business. These the Russian soldiers, who, although they did not invade the house, took the liberty of breaking into the cellar, promptly annexed, and having extracted the corks, began to drink. The drink did not exactly meet their views; on the contrary, they must have had cast-iron mouths and throats, and the vitriol must have been greatly diluted, or they would have paid with their lives the penalty of their lawless conduct. As it was they had fared pretty badly. Their lips and mouths were burnt black; their clothes,

hands, and boots were burnt, and they were half mad with rage and pain. They had rushed to the conclusion that the house must be a Turkish house, and the cellar a Turkish cellar; that the proprietor had purposely stored a quantity of devil's drink in wine-bottles, wherewithal to poison his Russian enemies, and that they were the victims. They insisted on regarding the servant as the Turkish proprietor, and strove to revenge themselves by forcing him to drink as they believed he had brewed. With wild cries and threats they forced bottles into his hands, and swore that he should drink. But he objected to the beverage in the most emphatic manner. He imitated the unwilling horse in that they could not make him drink; but in the struggle he got his hands and clothes very much burnt with the vitriol. Villiers interfered, and for the second time in this singular night he was in the hands of the Philistines. Still they had some sense of discipline and order left. They would not deal condignly with Villiers, although they professed to believe him a Turk and a spy. They whirled him up to a solitary under-officer who was addressed as the "patrol," and who appeared to be serenely superintending the operations of his comrades. The patrol recognised the correspondent badge on Villiers' arm, and ordered the soldiers to unhand him, whereupon the victims of vitriol retired, probably in search of a less fiery fluid as an alterative.

After break of day the work of plundering flourished with greater vivacity than ever. But now that there was daylight, and that he could see whither he was going, Villiers determined no longer to let the mischief continue without an effort to stop it. So he walked up to the infantry camp on the heights, found the colonel in command of the regiment, reported the proceedings to him, and asked for a guard to prevent further outrages. The colonel at once granted the request. He said he had already heard of the disgraceful conduct of the soldiery in the town, and was taking measures to stop it when Villiers came with confirmation of the discreditable fact. All his officers professed much disgust and regret. In a few minutes a strong guard was marching down to the little place with Villiers as guide. The officers commanding it at all events did their duty thoroughly. Every marauder met on his way to the camp from the town was searched. If his pannikin contained wine it was spilled upon the ground. The officer thrashed him, and then made him a prisoner. In the town a strategic movement bagged the plunderers of a whole street, some thirty-five in number, who were duly searched, thrashed, and made prisoners. This guard then remained permanently on duty, a police officer was appointed, as also a *commandant de place*. But the evil had been wrought; the scandal stuck like a blister. It is true there was an intention to give compensation for the damage done, but the *entente cordiale* between the Bulgarians and the Russians had greatly suffered. To descend to particulars, the Russian soldier may take credit for being quite as expeditious and sweeping, if not so quiet and methodical, a plunderer as the French "forager," as he modestly prefers to be termed. When the Russians arrived there was in the place an abundance of bread, meat, coffee, sugar, tobacco, cigarette-paper, writing-paper, under-clothing, boots, &c. But within two days there remained but the memory of these products of nature and art.

Confidence was, however, restored when compensation was made and the rest of the infantry followed, whilst the Czarevitch and his brother, the Grand Duke Vladimir, took up their head-quarters at Pavlo. By this time the forces on this line had received their title as the army of Rustzuk; but the commander-in-chief was certainly in no hurry to get there. Biela was first reached by the cavalry advanced division on the 5th July, and by the 11th there had reached there, thus far on the road, but one infantry division, the 33rd, belonging to the 12th corps. The 12th division, belonging to the same corps, was behind a few versts at Pavlo with the Czarevitch. Of the 13th corps, which with the 12th made up the army of Rustzuk, one division, the 35th, which was among the earliest troops to cross the river, was in the first instance sent on to Ovca Mojila, a village in a south-westerly direction from Sistova, had to march across country, and reached Kosna, which is close to Biela, on the 11th. The 1st division, the other division of the 13th corps, was in a valley to the south of Pavlo, so that the whole infantry of the army of Rustzuk was then within a few hours' march of Biela. Biela is two days' march from Rustzuk, but many days elapsed before the infantry pushed onwards. As for the cavalry division, the head-quarters of the

division general, Baron Driezen, were at Monastir, about eight miles in advance of Biela, on the road to Rustzuk, while the brigades Arnoldi and Stahl von Holstein were more forward, and spread out over a considerable extent of country. Cossacks were also forward to the east and north-east of the Biela position, sweeping the country, and driving in the scattered handfuls of Turks who had been lurking in the woods.

The delay may be attributed to several causes, but the principal reason was the necessity which was believed to exist for accumulating supplies to feed the troops before the advance began in earnest. Precaution in this respect was wise, but it was carried to an undue extent; and to cart supplies all the way round from Zimnitza for an army supposed to attack Rustzuk, was a needlessly roundabout process, when they might have been ferried over the river in the rear of the batteries at Slobosia, the railway station at Frateshti offering for this purpose a convenient basis for the operation.

At last the infantry gradually dribbled into its positions along the Yantra, but still no move forwards was undertaken. This inactivity naturally created great dissatisfaction among the officers eager for an opportunity to distinguish themselves. Earnest entreaties were persistently sent to the head-quarters begging for a relaxation of the strict injunction that the infantry mass of the army was not to cross the Yantra for a long time, but without effect. Yet, though the Czarevitch and his brother Vladimir were among the supplicants, General Niepokoitschitzki was obdurate in the maintenance of the prohibition against anything save a defensive and preventive attitude. The policy of this attitude was obvious. While two corps stood lining the road of advance on Tirnova, no attempt by the Turks to intercept that advance, or to disturb its communications, was likely to be made, as the Turkish field army, reported to extend from Rasgrad to Osman Bazar, could not change its front and, marching to its left, move off into the Balkans to interfere with the passage of the Russians through the defiles without showing a flank, and, indeed, its rear, to this threatening mass of men, purposely motionless for the time, but ready to march quickly and far when the opportunity for doing good by so doing should offer. The policy was obvious, but it was cautious. It was not in accord with Prince Frederick Charles's standing orders—"Find your enemy, and fight him whenever and wherever you find him."

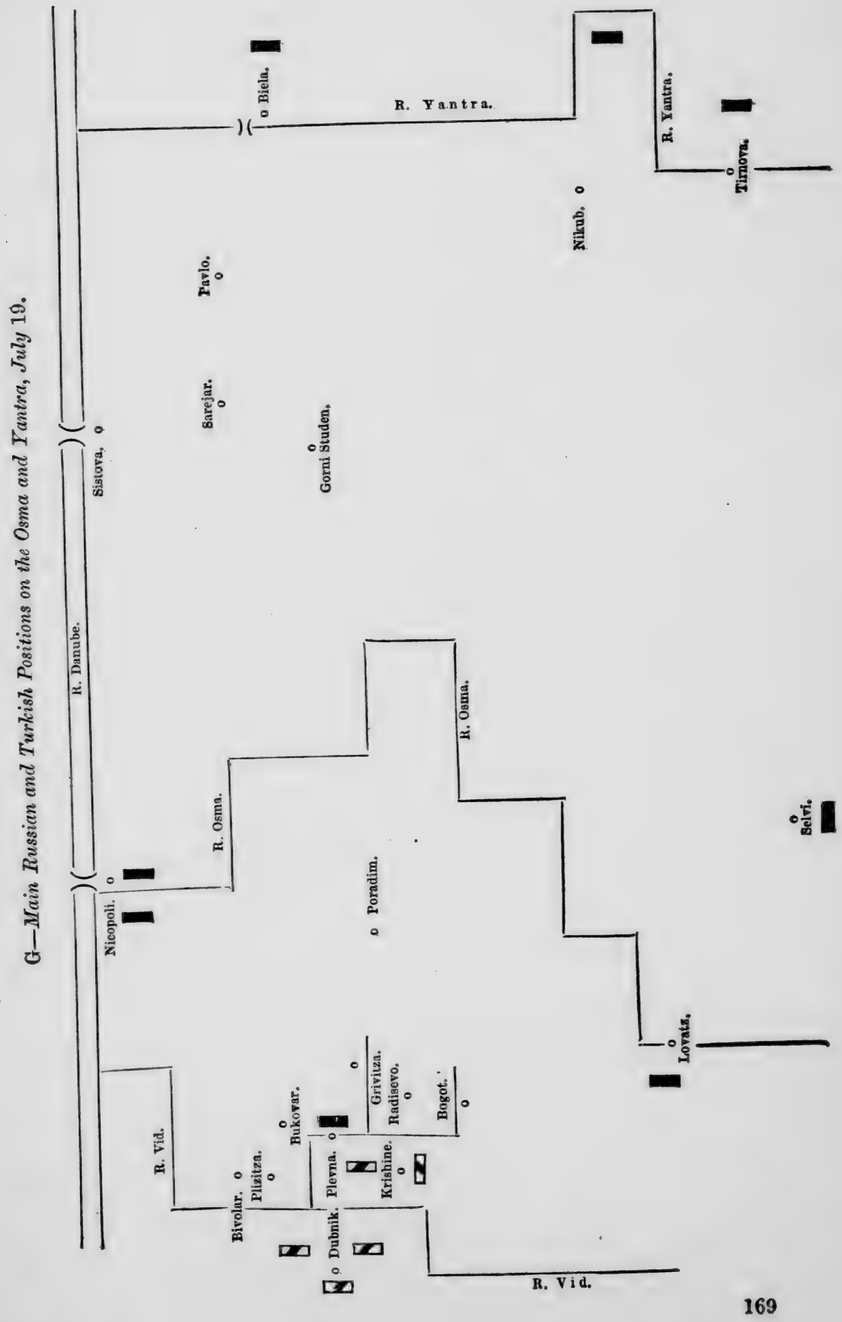
The restriction against crossing the Yantra was at last removed, head-quarters were transferred to Biela, and the whole army sent well forward toward Rustzuk, beyond Obertenik. On the heights above Domogila, a village to the north-east of Obertenik, lay the white tents of the 35th division. At Trstenik, a village close to the chaussée, about six kilometres beyond Obertenik, were the head-quarters of the Archduke Vladimir, commanding the 12th army corps. The infantry had pushed on the cavalry a few versts, and General Driezen's head-quarters were moved onward to the heights within four miles of the Danube, at Pirgos, due north; and just over the crest of the slope, on the reverse side of which he had pitched his camp, was the valley of the Lom. The forces were considerably crowded down in this corner between the Danube and the Lom, and cavalry and infantry camps were mixed up anyhow. A glance at the map will show that the main river Lom, the Cerni or Black Lom, entering the Danube at Rustzuk, flows down through Bulgaria in a direction nearly due north, bending to the north-east as it approaches the Danube. Along its western bank was the position of the Russian army of Rustzuk. It covered a broad front, although the principal concentration was near the Danube. The right flank of its cavalry was at Polomarcha, a village about forty miles south of the Danube, in the direction of Osman Bazar, and regiments were studded among the villages on the western bank of the Cerni Lom, all the way to Pirgos. The Beli, or White Lom, with a north-westerly course, flows into the Cerni Lom at the village of Kirsova, and the triangular interval between the two rivers was occupied by detachments of cavalry belonging to the 12th and 8th cavalry divisions. In all, about 40,000 men were now on the Lom by July 19. This position was gained without any fighting to speak of. There was a trivial cavalry skirmish on the height, and a few dragoons fell in clearing the crest of the Turkish troops. Two days before there was a more serious skirmish down in the Lom Valley, at a village called Kadikoi, about midway between the Lom and the road between Rustzuk and Schumla. There was reason to believe that Turkish troops were there in some force, and from the

heights on the western side the Lom, the Russians opened fire with one gun, with intent to provoke reprisals from the enemy, and so gain some idea of his strength. But the Turks were wise, or at least wily in their generation. They replied with one gun. If the Russians had brought two into action, no doubt they would have followed suit; but in the meantime a fair exchange was enough for them.

Emboldened by this seeming weakness, a couple of squadrons of Bilderling's dragoons were pushed across the Lom in the direction of Kadikoi. They advanced some distance, but not to glory. They had passed through a swarm of Circassians lying in ambush, and suddenly the two squadrons were beset, surrounded, and assailed with great fury. It remained for them but to fight their way back, which they did with a hard hand-to-hand struggle, losing some nine men killed and twenty-one wounded. The killed were brought into camp across their horses. The Circassians followed the dragoons across the Lom, hanging on their rear, and trying to cut off detached parties; but they came a little too far. A battalion of infantry had accompanied the cavalry as far as the Lom. So when the cavalry came back thus sore beset, the infantry were ready to cover them, and the Circassians found themselves exposed to the withering rifle-fire which it has since been ascertained caused them a loss of twenty men killed and fifty wounded. Subsequently, appearances indicated that Kadikoi and its vicinity had been evacuated by the Turks; and to make this certain, a *reconnaissance* was conducted in that direction by the Archduke Vladimir himself, at the head of a squadron of dragoons, a squadron of Cossacks, and a battalion of infantry. He penetrated to Kadikoi without opposition, and found it empty and deserted; so he determined to take the opportunity that offered, and make a bold dash at the railway between Rustzuk and Schumla. His Cossacks rode on through Buzin, and struck the railway at the Guvemli station. This they burnt, and blew up with dynamite an adjacent bridge, thus effectually destroying the railway communication between Rustzuk and Schumla.

Having proceeded so far, and having established themselves in the positions shown in sketch F, the Russians were satisfied. They had masked Rustzuk and the field army which still preserved its inactivity under Abdul Kerim, on the White Lom and Solenik Lom. And all this had been accomplished almost without a shot being fired—certainly without any serious combat—beyond the little skirmish between the Cossacks and Circassians above described.

We will now devote a few words to the advance westwards.



Simultaneously with the advance on the Lom and on the Balkans, an expedition was sent westwards, under the command of General Krüdener, to seize the fortress of Nicopoli, opposite Turn-Magurelli, when an attempt to force a passage was undertaken on the same night that the Danube was forced at Sistova.

That attempt, as we have seen, was unsuccessful, owing to the determined resistance of the Turks and their presence in force. The passage of the Danube, therefore, as originally planned, was a failure, although that failure was hidden and redeemed by the successful passage at Sistova. But that the speedy possession of Nicopoli was regarded by the Russians as an absolute necessity, is evident from their at once sending General Krüdener westwards to seize it in the flank and rear, whilst the Roumanian and Russian forces and batteries on the opposite shore assailed it in front.

General Krüdener, believing, with the rest of the staff, that Osman Pasha was making his way down across the Balkans, or not giving the matter a thought, or not coming where Osman Pasha was, marched straight upon Nicopoli, as though it were the only place in the universe worth thinking about. Supposing that Plevna was held only by a few detachments of Turkish soldiers, he neglected to send either cavalry or infantry to that place, if only for the purpose of protecting his flank.

A glance at sketch G will plainly show the great initial error committed at this early stage by the Russians. Although it was certain that Osman Pasha, with 40,000 men, was somewhere in the country west of the river Osma, the Russians not only took no measures to ascertain precisely where Osman Pasha was, but they also neglected to secure the lines of the Osma and Vid, as they had done on the Yantra and Lom. With the exception of General Krüdener's force at Nicopoli—engaged as they were with the attack on that place—and a weak detachment at Lovatz, the whole line of the Osma and Vid was left to take care of itself.

G—*Main Russian and Turkish Positions on the Osma and Yantra, July 19.*

However, elated with their relative success—gained, be it repeated, because there was no opposition—the Russians undervalued their enemy, and neglected the most elementary precautions in this direction of the field of war.

Thus, unsecured against any attack on his left flank or rear, General Krüdener commenced his attack on Nicopoli. The action was opened by the batteries on the opposite bank, which by far outnumbered the Turkish pieces, and equally far exceeded them in weight of metal. Breaches were speedily opened in the crumbling fortifications; in many places the town was set ablaze, and on the third day the assault was ordered. Advancing from all sides, and supported by the redoubled activity of the Russo-Roumanian batteries, several outworks were at last carried, and Hassan Pasha, the commander, forced to capitulate for want of ammunition on July 16, and yield himself and 6,000 men prisoners. This success was purchased with the loss of about 1,500 Russians killed and wounded. It was therefore the most important affair the Russians had as yet sustained, and gave them a foretaste of what was to come as soon as they really felt the enemy. Had they been wise they would have taken more account of this affair than they did, and have arrived at the conviction that it was one thing to advance unopposed, and another when the road was disputed.

Meantime the Turks had been fortifying themselves in Plevna, whilst Osman Pasha, hearing that Nicopoli was lost—or perhaps purposely leaving that place to its fate—was calling up all the forces at his disposal to occupy Plevna, and secure his communications with Sophia by the Orkhanieh Pass. (See sketch E.)

Some inkling of this movement, or perhaps only the fact that a larger force was at Plevna than at first supposed, caused General Krüdener to send General Schilder-Schuldner, as already mentioned, to seize Plevna, before which place Schilder-Schuldner arrived on July 19th, when the positions were as shown in sketch G.

During the attack on Nicopoli, a few miles south of Sistova, there was a sudden alarm. A Cossack rode in with a hurriedly scribbled despatch from a telegraph clerk at the bridge across the Danube, to the effect that the Turks were marching from Nicopoli on Sistova, and threatening to sever the Russian communications, destroy the bridge, and compromise the safety of the emperor. Immediate steps had to be taken. One brigade of the 11th corps was in Sarevica. The other brigades of the same corps were forwarded. Dispositions were made with the artillery and infantry covering the line of the heights protecting the line of approach from Nicopoli. The emperor himself assumed the chief direction of affairs, and is said to have shown at once the most perfect coolness and competent military ability. The scouts sent out, however, brought back the intelligence that the country in the direction of Nicopoli was quiet, and presently there arrived intelligence from Baron Krüdener, respecting his success at Nicopoli. It was ultimately discovered that the telegraph clerk had become confused and alarmed by the noise of firing at Nicopoli and concern for the emperor's safety. The incident seems trivial, but shows on what thin ice the Russians were treading with hostile forces left on both flanks.

To this scare succeeded the elation produced by the capture of Nicopoli, the triumph being heightened by the arrival of Hassan Pasha, the brave defender of Nicopoli, of whose fighting prowess the Russians themselves spoke with generous appreciation. As he fought when free, so Hassan Pasha acted when a prisoner, bearing himself before the Great White Czar with true Turkish *nonchalance*. When asked why he capitulated, he said his ammunition was all gone, and he had been obliged to kill with his own hand three or four soldiers who left their duty. He spoke as rank folly of the conduct of a Russian artillery officer who, when one position was barely carried, rode his guns in among the still undefeated Turks, and, unlimbering, came into action against other positions as yet uninjured. So highly did the Russian staff estimate General Krüdener's success, that they considered that gain of the fortress freed them from the threat of attack on their right flank; and one division, the 31st, was thought sufficient, on the line of Plevna-Nicopoli, to protect communications and guard against any trouble from the Widdin direction. The other, the 5th, was intended to form a portion of the Balkan advance, which had apparently been so brilliantly inaugurated by General Gourko. To this operation we must now devote our attention.

CHAPTER XVII.

THE FIRST PASSAGE OF THE BALKANS.

WHILST, as we have seen, a screen was thrown forward on either side to protect the flanks of the advance on the Balkans by the main force, which was to pierce its way beyond the Balkans into Roumelia, and dictate the terms of peace before the walls of Constantinople, General Gourko was entrusted with the task of clearing the way for the Grand Duke Nicholas and the 8th corps.

But though the passage of the Danube was effected on June 27th, several days elapsed before General Gourko was well on his way to Tirnova with two brigades of cavalry, and field artillery; and it was not until July 7th that he effected his entrance, almost unopposed, into Tirnova. The Russian staff therefore allowed no less than eight days for a cavalry raid on a place not more than fifty miles distant from Sistova—a rate of marching of six miles a day!

Tirnova itself, beautifully situated in the valley of the Yantra, which winds tortuously through the town, was occupied by about 1,500 Turkish line, who, after firing a few shots, withdrew over the hills towards Elena, as they were unsupported by any large forces in the vicinity. The place was not fortified, though it might have been made of immense strength; but would, in that case, also have required a very large number of men to hold it.

The news that Tirnova was denuded of Turkish troops, and that none were in force in the vicinity, arrived at Sarejar on July 8th, and on the following day the grand duke and the greater part of the 8th corps started to occupy it in force, the grand duke intending to make it his head-quarters. He arrived there on July 12th, with the greater part of the 8th corps, and therewith the town was really occupied by the Russians. The march from Sistova was rather like a military promenade or a triumphal procession than a forced march. Everywhere the people came out to meet the army, offering bread and salt and the most friendly greetings; while the women and girls offered fruit, and pelted the men with flowers. At the entrance of many of the villages, arches were erected, covered with leaves and flowers. Processions, headed by priests, came out singing, with pictures from the churches, standards, and banners. There were deafening cheers, and the most extravagant joy. They insisted on shaking and kissing hands, and shed the customary tears. At the entrance of the village of Zavada, at the beginning of the gorge that leads to Tirnova, a rude arch was constructed of branches of trees. The whole population of the village gathered at the road-side near it. The soldiers, without orders from their officers, uncovered as they passed under, to the great delight of the people; while a huge bar of iron, beaten by a mallet, gave forth the first sound resembling a bell heard there for four hundred years. Just inside this gorge or hollow there were two very ancient monasteries, built one on each side of a steep mountain side. The priests from these monasteries came down with banners and pictures, and a large beautiful Bible, which as many of the soldiers as could, kissed as they passed, the people of the monasteries hoisting old bells which had lain hidden in the basements for four hundred years, and the voices of which were soon heard rolling up and down the hollows and gorges of the mountains.

The reception at Tirnova was splendid. The streets were full of women, girls, and children, who mingled with the soldiers on the most friendly and sociable terms. The windows were teeming with the faces of pretty girls, flags, and streamers. The narrow, crooked streets were choked up by crowds of people, soldiers, horses, and waggons, and the whole town was ringing with excitement and joy. Such was the greeting the invaders received at all hands. The grand duke arrived about noon. He was met at the usual entrance to the town by priests in robes chanting prayers in the old Sclavonic tongue, and by immense crowds of people. With deafening cheers he was conducted to the church, where he attended a short service, then passed through the streets, where several arches had been erected with the inscription upon

them of "Welcome," followed by a crowd of girls singing. The women and girls at the windows literally covered him with flowers, while Christo Ignatieff, with the enormous moustache, was quite buried in the carriage under the leaves, flowers, and wreaths showered upon him. The grand duke then went to the quarters already prepared for him.

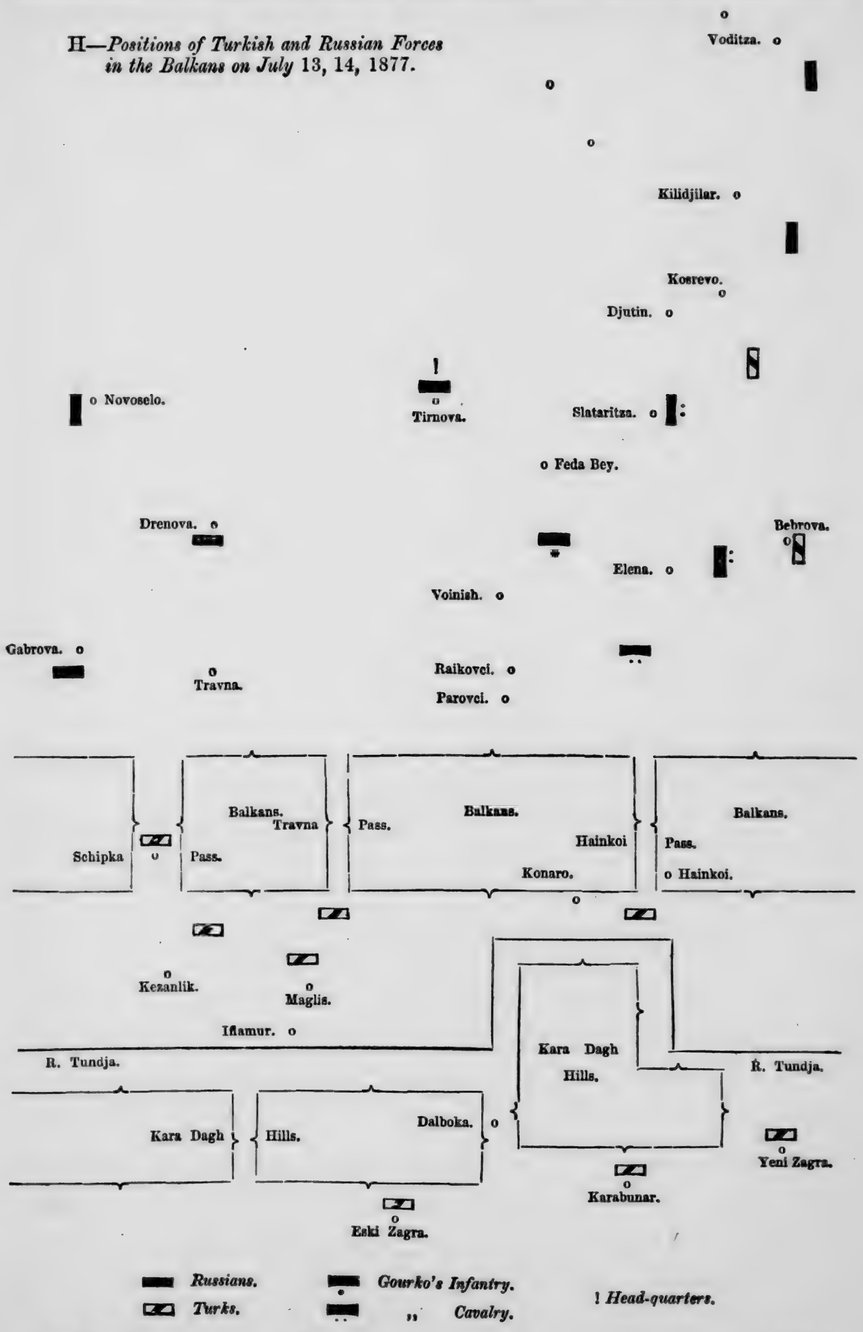
The people universally opened their houses to the Russians. There was no trouble about getting billets. The officers had only to inquire at the first house, and if not already occupied they were sure to be received. In only one village had there been a cool reception. This was Akchair, where the people showed a disinclination to sell anything, either because they were afraid the Russians would go away and the Turks come back, or because some flying band of Russians had taken things without payment. The Turkish population fled everywhere, and several villages had been abandoned, the Turks carrying off all their effects that they had not been plundered of. Nearly the whole Turkish population had also fled from Tirnova, carrying off their goods and chattels. The houses of those who fled were more or less damaged by the Bulgarian population. Windows and doors were smashed, as at Sistova. The most needy part of the population helped themselves to what the Turks left behind, which was not much. These acts were committed during the day or two of anarchy which followed the departure of the Turks and preceded Russian rule. They were repudiated by the better class of Bulgarians, who expressed great chagrin at them, but who professed to have been powerless to prevent them.

The conduct of these retreating Turks deserves mention. Though there were isolated cases of outrage and murder and violence, they were rare. They drove off all the Bulgarian live stock—sheep, horses, and cattle—they could lay their hands on, but did not go further.

The grand duke was thus safely installed in Tirnova, and Prince Mirski was sent forward with part of the 8th corps to attack the Schipka Pass in front, whilst General Gourko, who had left Tirnova the day before the grand duke arrived, was to try to cross the Balkans at some other point, and attack it in the rear.

The positions of the Russians and Turks at this juncture—on July 13-14—are shown in sketch H.

At Tirnova there was the grand duke, his left flank protected by Gourko's cavalry till relieved by a detachment of the 8th corps which occupied Slataritza. His right was protected by another detachment at Novoselo, and still further west, at Selvi on the road to Lovatz (see sketch F). Prince Mirski was well forward with his forces at Drenova and Gabrova, scouring the country round Elena.



In front of these forces lay the Balkan passes. From Tirnova, the road to the Schipka Pass led past Drenova to Gabrova. Midway between these two places the road split, the chief one going on straight to Schipka, and the other to Travna, whence it ran southwards through a difficult pass, and emerged in the valley of the Tundja, opposite the village of Maglis.

West of Tirnova, a road led to Novoselo, and Selvi, and Lovatz; to the east, one road ran due east to Slataritza, and another south-east to Elena. This latter road splits at Feda Bey, the high-road running to Elena; whilst the other, a cross-road, led to the Hainkoi Pass, a difficult, little known pass, seldom traversed by either Turk or Bulgarian except for local purposes, the great traffic between the northern and southern sides of the Balkans being carried on through the Schipka or Slivno passes west and east.

Of these three passes, two, the Schipka and the Hainkoi passes, have become renowned. The third, the Travna Pass, has never been mentioned during the war; and yet, as we shall show, that pass might have been turned to immense advantage by either Turks or Russians in subsequent combats, as by means of it either party might have outflanked the other.

South of the Balkans and its passes the river Tundja flowed, from west to east, through a broad valley, the southern boundary of which was formed by the Kara Dagh mountains. This hill approached the Balkans opposite the Hainkoi Pass, and forced the river Tundja to describe a wide bend. On the southern side of the Kara Dagh lay the towns of Eski Zagra, Karabunar, and Yeni Zagra, near which ran the railway from Adrianople to Yamboli. The Kara Dagh is also pierced by two comparatively easy passes leading from the valley of the Tundja into the plains of the Maritza. One of these passes, the most westerly, leads from Kezanlik to Eski Zagra, and the other from Maglis to Karabunar and Yeni Zagra.

H—*Positions of Turkish and Russian Forces in the Balkans on July* 13, 14, 1877.

There were thus three distinct sections of country lying between the Russians at Tirnova and the great Roumelian plains. The first was the Balkans; the second, the valley of the Tundja; and the third, the Kara Dagh.

Now, having arrived in force at Tirnova, the Russians spread out like a fan, as shown in sketch H. The Turks occupied Schipka, Kezanlik, and Maglis with small detachments, whilst the *gros* of their forces were south of the Kara Dagh, at Eski Zagra, Karabunar, and Yeni Zagra; the basis and head-quarters being at Adrianople, even as the Russian basis was at Tirnova. Should the Turkish basis be forced, the Turks would have to fall back upon the lines of Tchataldja in front of Constantinople (see sketch F). Should the Russian basis be forced, the Czar and his army would have to fall back across the Danube at Sistova.

In these few lines the whole gist of the Russo-Turkish campaign is contained, and the object of Turk and Russian succinctly explained.

The first thing which General Gourko had to do when he left Tirnova on July 11, was to ascertain how far the Turkish concentration, said to exist about Osman Bazar, was in force, and whether the alignment of the enemy was prolonged from Osman Bazar in a southerly direction through the Balkans. Accordingly General Gourko led a cavalry *reconnaissance* on the road in the direction of Osman Bazar, and pushed it home with considerable determination—driving in the isolated detachments of the Turks till he learned that there were some 6,000 Turks in the Osman Bazar district, which, however, constituted the left flank of the Turkish alignment between the Danube and the Balkans. Their position did not prolong itself into the mountains; so, leaving a detachment of the 8th corps, which had followed him, to watch the Turkish position about Osman Bazar, he coolly turned his back, wheeled his cavalry round from east to south, and headed straight for the Balkans.

At Feda Bey the expedition struck the road to the Hainkoi Pass. This pass and this road were discovered by Prince Tserteleff, to whom had been confided the whole business of obtaining information about the roads, the movements of the enemy, their numbers, dispositions, and so on. He soon ascertained that the Turks had fortified the Slivno and Gabrova passes in such a way as to render the forcing of a passage at either of them a very difficult matter, and he determined to look for another. Count Moltke, in his book, refers to a pass between those of Gabrova and Slivno, but speaks of it as only a path not practicable for an army. Prince Tserteleff decided to investigate this pass, in the hope that it might lead to something. He soon ascertained that it had a very bad reputation—a place that was generally frequented by brigands, and rarely used either by Bulgarians or Turks. Among the Turks he found it had even a worse reputation than among the Bulgarians. It was a kind of tradition among them that this pass was in the clouds, that the defiles leading to it were so wild, so savage and barren, as to be unfrequented by either bird or beast—a kind of mountain desert where nothing could live. Pursuing his investigations, the prince heard of a man who had been through this pass, and, finding him, he learned that he had been through in fact, but that was two years ago, and the road might have become impassable since then. But what made the information really important was, that he had been through with one of the ox-carts of the country. If an ox-cart could go through, very probably a cannon might be got through somehow, and it was determined to reconnoitre and explore. Three days before the arrival of the grand duke at Tirnova, General Rauch went forward with 200 Cossacks for this purpose, taking with him Bulgarian guides. Without waiting to explore the road to the end, he immediately began preparing it for the passage of artillery—a task which, as far as the pass itself was concerned, turned out to be no very difficult matter, as the worst part of the road was on the south side. The most wonderful part of it was, that although these 200 Cossacks were working three days on this road, with the Bulgarian peasantry coming and going all the time freely, the Turks never got a whisper of their presence, nor any intimation of the evident intention of the Russians to try this pass. They even sent three battalions from Kezanlik to Slivno to strengthen the positions before the latter place, and these three battalions passed by Hankoi, at the mouth of the pass, the day before the Russians issued out. These three battalions were just where they ought to have been had they but known it, as they ought to have done, and they could have prevented

the success of the movement. And yet, although the whole Bulgarian population of a dozen mountain villages knew the Russians were there, not one man was found amongst them to inform the Turks. Such is the advantage possessed by an army operating among a friendly population. The Turkish staff either did not know of this pass at all, or, knowing it, believed it to be so impracticable that they did not even think it worth while to place a corps of observation to watch it. A small body of troops had been there, which had not even been placed there to watch the place. They were merely a small body whose retreat had been cut off by the Russians at Elena, and who had retreated by this road two or three days before the Russians came, without thinking it worth while to leave a single man to guard the entrance to the pass.

The only danger, therefore, that the Russians had to fear was, that some wandering party of Bashi-Bazouks or marauders should pass that way and discover what they were at, or that the noise made by the Cossacks in repairing the road should excite the curiosity of the small Turkish force which it was known was at Hainkoi, at the outlet of the defile. They did not dare to use powder for blasting the rocks, by which they might have made the road passable in several places where it could hardly be called so for artillery in the condition in which it was left by the Cossacks. But Prince Tserteleff, who had greatly distinguished himself during the passage, and to whom must be given the honour not only of discovering the pass, but of conducting and piloting the advance guard through it, went forward continually with one or two Bulgarians, reconnoitring the route far in advance of even the advance guard. He even disguised himself in a Bulgarian peasant's clothes, and went forward on foot, anxious to see if the road were really practicable before the whole column should advance to what might, after all, be only a sheep-path, over which it would be impossible to take artillery; and he was the first man of the Russian army, and his the first horse, to cross the summit, and the first to open out the defile at Hainkoi.

The road having thus been decided on, General Gourko collected his cavalry round about Elena, and started southwards without more ado, followed by his infantry and artillery into the wild country, broken up by gorges and clefts, which lay between him and the entrance to the pass. He passed through the villages of Voinish and Raikovci to Parovci, a little hamlet made in a gorge of the Balkans, in a dark, narrow little dell, whose sides were so steep that the dozen houses which made up the village seemed to be holding on with hooks and claws, to keep from slipping down into the deep ravine beneath them.

The silence usually pervading these mountains, rocks, and forests, disturbed at most by the occasional cry of some bird startled in its slumbers, was broken by the hum of voices, the impatient stamp of the horses, and the rattle of harness. Just below the village stood a battery of artillery; and extending two miles further up, and three or four miles further down the dark, crooked, rocky little hollow, the rest of the army lay asleep on its arms, without fire or supper, waiting the first ray of daylight to resume its march. It was impossible to take the artillery along in the darkness, through one of the most difficult defiles of the Balkans. Absolute silence in the weird stillness of night was absolutely necessary also, which explains the absence of camp fires and supper, and the usual sights and sounds of a bivouac. The glare of camp fires reflected on the sky, and seen from the other side of the mountains, might have given the alarm to the Turks; and a very small force, a very little thing, would stop the way, and even result in the destruction of the column. They were less than ten thousand men, and were extended along this narrow, crooked defile a distance of seven or eight miles. If the Turks had got wind of the advance, they could have concentrated on the other side, and cut the Russians off in detail as they came out, as easily as one could catch water coming out of a bunghole. There were other dangers to be thought of too. One thunderstorm would have rendered the road, already so difficult, quite impassable. Then there was still the possibility, though a remote one, of the Turks rapidly concentrating twenty-five or thirty thousand men, and crushing them before they could get reinforcements. It was a hazardous undertaking, but one which, if successful, would ensure the passage of the Balkans to the main army.

The night, however, was passed in safety; and in the morning it was found that the road from Parovci to the top of the pass was not nearly so bad as had been supposed. Indeed, the road all the way up to this point

had been much better than was expected. It had been rough to be sure, full of holes and stones, in some places passing, for a hundred yards at a time, over mere heaps of stones that covered the whole bottom of the hollow; at other times through the fields; but there had been but two or three places as far as Parovci where it had been at all steep. With help from the men in these two or three places, the horses were able to draw the artillery through with ease. At Parovci the road began to grow steep; and to the summit, a distance of about two miles, the men had to help the horses nearly the whole way. But even here the great difficulty of mountain roads, their narrowness, does not seem to have been encountered at all. The road all the way to the summit was made wide enough for the wide-tracked artillery waggons without any difficulty. It led up the side of the little hollow, which was thickly wooded to the very top, and opened out on a long narrow ridge, shaped like a saddle, and not more than fifty or sixty feet wide. This was the summit of the pass, the descent on the south side being far more precipitous than the ascent. Here the men had to help to hold the artillery back instead of pushing it forward.

Two hundred Cossacks were drawn up on this ridge, with their horses' heads turned south, looking away over the interminable labyrinth of mountains, hills, ridges, valleys, hollows, and gorges, through which they still had to bore their way to the valley of the Tundja before their passage could be assured. The first streak of day was just growing visible in the east, and a long flash of rosy light climbing slowly up the sky. Before and beneath was a dark narrow gorge, still a pool of blackness, into which they slowly descended down into the depths of the dark defile. The first three or four hundred yards were very steep; but at the end of that time they had come fairly into the little hollow, and the descent the rest of the way was gentle and easy, although the road was rough. The hollow was narrower even than the one on the other side, and the trees were large, the branches completely uniting over-head, making it as dark as a cavern.

A little further on, in a narrow valley, the expedition again camped for the night, being then about half-way between the top of the pass and its outlet at Hainkoi; and as the Turks, known to be at the issue, were but five or six miles off, no fires were lighted. At break of day the force again moved forward cautiously, General Rauch leading, and at about nine o'clock turned sharp round a projecting bluff that a moment before seemed to completely bar the way, and found the defile suddenly open out to the width of half a mile, and beheld beyond the valley of the Tundja; and here, not more than half a mile distant, lay a Turkish camp. General Rauch had already learned from the Bulgarians that there were only a couple of companies there; and counting upon the effect of the surprise and the certainty that the Turks could not know that the whole Russian army was not at his heels, he determined to attack and clear the outlet at once with his two hundred Cossacks. They at once began to advance, firing to drive them away. The Turks were completely taken by surprise. It is not a little remarkable that outpost service should be often the very last thing learned, and that it should never be learned at all by some nations, as by the Spaniards and the Turks, in spite of their having everything else—arms, equipments, organisation — appertaining to modern warfare. A Spanish army will march boldly within the enemy's lines, billet the troops in a village in a little hollow surrounded by hills half a mile distant, without putting out a single picket, with the usual result of surprise and defeat. The military history of Turkey is full of surprises and defeats caused by the neglect of the outpost service. So the force here, watching a most important point, had put out no pickets; it was taken by surprise, thrown into consternation at the near approach of the Russians, and instantly began to retreat—two companies of infantry of the regular army before 200 Cossacks. I could hardly have believed it if I had not seen it. They fired as they fled, but there was little harm done on either side, the Russian loss being five or six wounded. The Cossacks drove them out on the Slivno road, beyond the village of Hainkoi, whence the fugitives proceeded to Konaro, where, next day, they attacked the Russians, but were repulsed after some sharp fighting. In the course of the day General Gourko arrived with six battalions of Russian sharpshooters numbering about 2,000 men, and towards evening, the Bulgarian legion, the dragoons, the hussars, the rest of the Cossacks, and the artillery arrived, making up the whole detachment, and the outlet of

the defile was made safe. The force under General Gourko's command, at this point, consisted of seven battalions of Bulgarians, about 5,000 men; six battalions of sharpshooters, about 2,000 men, the battalion of sharpshooters being very small; a brigade of dragoons, 1,000 men; a regiment of hussars, 500; and three regiments of Cossacks, 2,500 men; three batteries of field-pieces of six, and a battery of mountain guns light enough to be carried on horses—in all about 11,000 men. "With this force," as the correspondent of the *Daily News* trumpeted forth, "half of which were raw recruits not yet four months under arms, and one-fourth more (the Cossacks) irregulars, the Russians made and secured the passage of the Balkans, one of the most formidable bulwarks ever raised by nature for the defence of a country. And they did it with a loss of six men wounded. For the passage was secured from this moment. Even had the attempt to force the pass at Kezanlik proved unsuccessful, the whole army could have crossed this pass with ease." This outburst of mock enthusiasm on the part of the *Daily News* correspondent, characterises the whole tone, with some few exceptions, of the *Daily News* comments on the war. As we have seen, the pass was quite undefended. Where, then, was the glory? Credit may be given to the Russian leaders for their astuteness in finding an undefended pass across the Balkans; and the passage may be regarded as a pedestrian feat on the part of the men; but that is all.

The next day there was some appearance of the Turks concentrating to attack. The three battalions that had passed on the way to Slivno two days before seemed to have returned, and made a show as if they would attack. General Gourko took the dragoons and started to meet them, giving orders for the Bulgarian troops to follow, as he wished to try them once under fire. But the three battalions of Turks retired so rapidly before the two regiments of dragoons, that the Bulgarians could not get up to them. The dragoons drove them some ten miles in the direction of Slivno, and then returned to Hainkoi. "This retreat of three battalions of infantry, 2,000 to 3,000 men, before 1,000 cavalry, was almost as bad as the flight of two companies before 200 Cossacks." This sentence again shows the bias of the correspondent. He does not add that the 1,000 dragoons were supported by 10,000 other troops.

The next day after this affair, or the third after the arrival at Hainkoi, General Gourko, leaving the Bulgarians to guard the place, took the rest of the detachment, and started for Kezanlik. They met a small force a short distance from Hainkoi, which fled after firing a few shots. This force retreating before the Russians, proved to be a most unfortunate circumstance for four or five Turkish villages on the way to Kezanlik. They took refuge in these villages, and fired on the Russians from the houses. The result was that the Russians set fire to every house from which they had been fired at, and, the fire spreading, these villages were for the most part destroyed.

In the meantime the news of the arrival of the Russians had spread to Kezanlik, and the Turkish commander there detached three battalions from the force guarding the Schipka Pass, and sent them to meet the enemy. The Russians met this force near Maglis, about two-thirds of the distance to Kezanlik, and the fight began at once. The Turks had taken position in the gardens, and opened fire as soon as within range. General Gourko then marched straight on Maglis. His troops formed in three columns, one consisting of infantry, close to the mountains. The middle column was cavalry and infantry, and the left column cavalry only, with orders to cover the flank, and if possible to turn that of the enemy. At Iflamur he was stopped by a strong position, and had to cope with the Turkish artillery, cavalry, and infantry. When he was pushing them hard, five battalions of Anatolian Nizams came up as reinforcements, and behaved very well. Their fire, begun as it was at 2,000 paces, caused the Russians considerable loss. The Russian orders were, not to open fire till within 600 paces of the enemy, and it was in this interval that the Russians suffered most. But when their distance was reached, their superiority in numbers allowed them to pour in a fire which soon compelled the Anatolians to give way, with a total loss, at Maglis and Iflamur, of 400 killed and wounded, many of whom fell at close quarters, sabre and bayonet having been freely used in the gardens and houses of the villages. But though forced to yield up their positions, the retreating Turks kept up a running fight all the way to Kezanlik, a distance of six or seven miles; and that they fought well is proved by the Russian loss in this running fight, which was some

600 killed and wounded, nearly the whole of which took place near Maglis, when the Turkish positions were first carried.

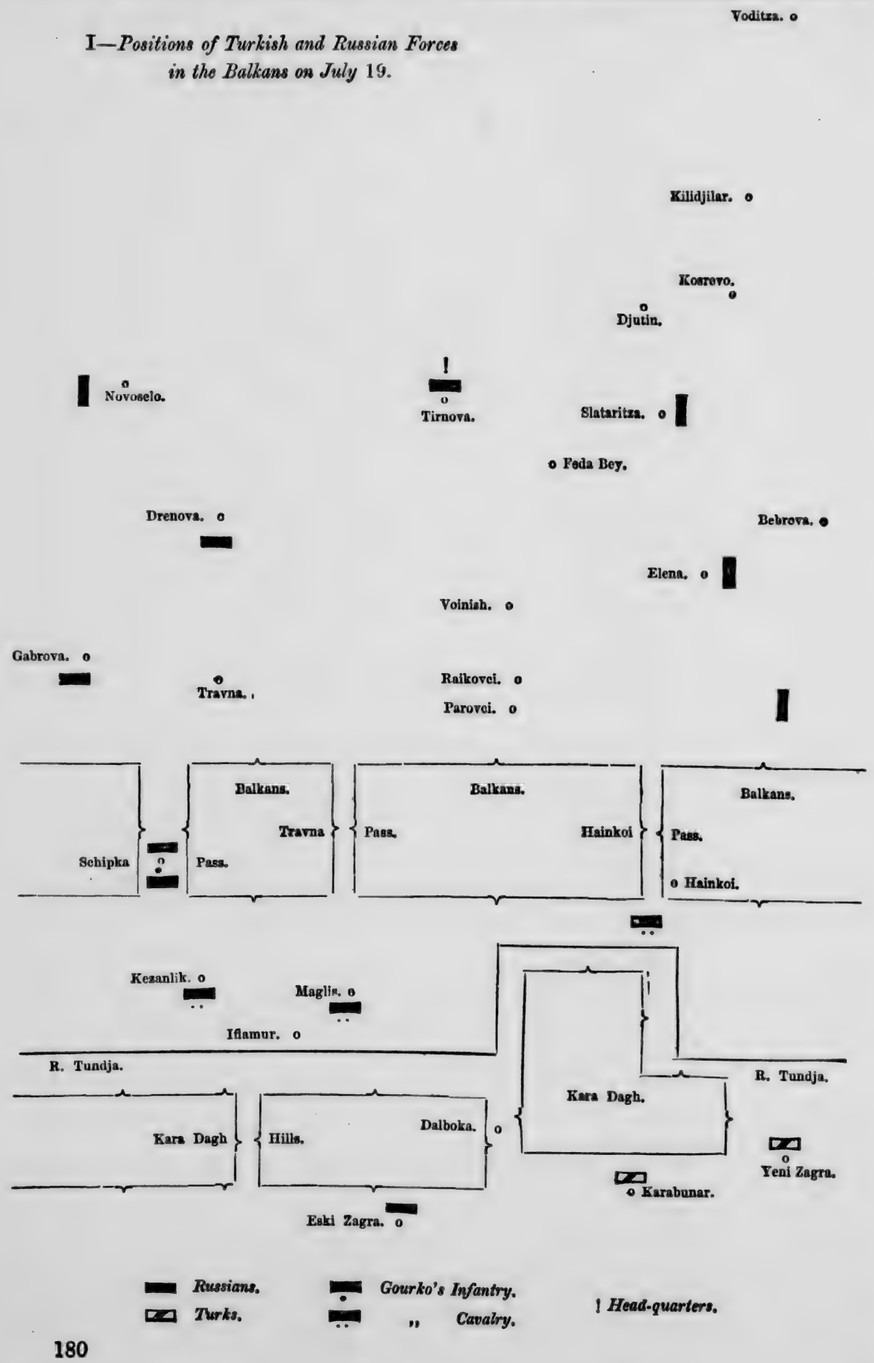
General Gourko and his forces got into Kezanlik in the evening, and were most enthusiastically greeted by the Bulgarian population. The Turkish inhabitants had withdrawn into their houses, frightened nearly to death. They had been kept in ignorance of the real progress of the Russians by the Turkish papers, which had been announcing a continued succession of victories for the Turkish arms. Their relief upon finding that the Russians passed through the town without molesting them was very great. But they still had the lower classes of their Bulgarian neighbours to deal with, and this proved to be a far more difficult matter than appeasing the Russians. These Bulgarians had many an old score to settle up, and they proceeded to call the Turks to account with a promptitude and decision which showed how firmly they believed that Turkish rule and Turkish domination were things of the past. Getting a Cossack or two, of whom there were always a number everywhere without any very absorbing occupation, to go along with them, they went into every Turkish house, and rifled it of as many valuables as they could conveniently carry off.

Money where it was to be obtained, jewellery, trinkets, ornaments, linen, clothing, carpets, were the things that were seized. No house was as yet, however, thoroughly pillaged and ruined, except a few that had been abandoned by their owners, and those owners were men who, owing to their misdeeds in 1876, did not dare to remain and allow themselves to fall into the hands of the Russians. One of these was a Sadoullah Bey, a namesake of the then Turkish minister at Berlin, whose house was filled with plunder taken from the Bulgarians during the massacres, and whose fields were likewise filled with cattle from the same source. This man's house was thoroughly pillaged and wrecked, as were the houses of half-a-dozen others of the same class. The fault of it all must be fixed upon General Gourko, who for two days allowed the town to take care of itself, so intent was he upon carrying out the task which had been entrusted to him. Until the pass of Schipka was taken, his position was, of course, a most precarious and critical one. With a small force, completely cut off from the main army, and separated from it by the Balkans, against which the Turks might have rapidly concentrated their whole army south of the Balkans, he was, of course, justified in trying to get possession of the pass, and thus secure his own safety, before looking after the property of the Turks. Still there appears to have been a method in this system. Almost every town occupied by the Russians was left, at some time or other, to the mercy of the Bulgarian population, to do the work for which the Russians did not care to take the responsibility.

However, having left Kezanlik to the Bulgarians, General Gourko, after reconnoitring the positions of the Turks in the Schipka Pass, determined upon an immediate attack. The village of Schipka is some six or seven miles north from Kezanlik, right at the foot of the mountains. A peculiarity of the Balkans is that, while on the north side there is a long series of hills, lesser mountains before you come to the main range, here on the south they stop off short, without any foot-hills at all, unless the other range south of the Tundja Valley may be considered such. As you ride along the valley of the Tundja, you see those monster masses of earth, and rock, and forest rising abruptly out of the plain without any intermediate hills or irregularities, like a row of sugar-loaves placed along a floor and rounded off at the top. The pass is therefore only a couple of miles from the foot of the mountain on the south, and the road up to it very steep and difficult. The Turks had fortified it in the most thorough and effective manner; and had the Russians been obliged to attack it from the other side, it would have cost them a fearful loss of life. As it was, it cost the Russians something like four hundred killed and wounded. But the Turks were discouraged when they found their positions were turned, and did not fight with any hope or chance of success. A Russian force, under Prince Mirski, had advanced on the Gabrova side, and it had been arranged that a combined attack was to be made on the pass from both sides at once; but owing to the difficulty of communication, the combination failed. The attack from the Gabrova side was made a day earlier than it ought to have been, and the one from the Kezanlik side a day later, and both were repulsed.

It had been designed that Gourko should reach Kezanlik on the 16th of July, and on

the 17th be free to assail in the rear the Turks holding the Schipka Pass, while Prince Mirski with the 9th division attacked them in front. But, as we have seen, he was delayed by hard fighting, and the troops were too much fatigued to move further on the same day after the occupation of Kezanlik. So there was no co-operation between General Gourko and Prince Mirski in attacking the Schipka Pass; but the latter, nevertheless, delivered an attack on that position marching southward from Gabrova. He sent against the Turks but one regiment, that of Orloff, which he divided into three columns. The pass was strongly fortified with six successive tiers of intrenchments and batteries, and defended by picked Turkish troops, Circassians, and Egyptians. The latter fought very hard. Of Prince Mirski's three columns, that on the right encountered little opposition, and went on some distance till it missed the support of the centre column, fought five or six hours, and then made good its lodgment in the hostile lines. The left column, consisting of two companies, missed its way, and was beset by twelve companies of Turkish soldiers, and had to fight a retreating combat for four hours against terrible odds, losing eight officers killed and wounded, and about 150 men. It was brought out of action by the only officer left standing, and he was wounded.



On the 18th, General Gourko, his men refreshed, advanced to the attack of the Schipka position from the rear. Two battalions of rifles formed his advance. As they neared the rear of the position, a flag of truce came out with a *parlementaire*; for the Turks, though they had laid in an ample supply of provisions, had forgotten to make arrangements for a supply of water, not having foreseen that their rear would be attacked, where there was plenty of water to be had.

As soon as the flag of truce was displayed the Russians at once halted, and an officer acting as escort went forward to meet the *parlementaire*. While negotiations were going on, the Russian riflemen, in their curiosity, quitted their extended formation, and drew together into a mass behind where the officer was communing with the *parlementaire*. The Turks seeing this movement, imagined that the Russians were going to fall upon them and massacre them, and poured volleys of rifle fire in upon them from their positions. The *parlementaire* took to his heels at a signal which the Russians heard but did not comprehend. So sudden and fierce was the fire, that in their two battalions the Russians lost one hundred and forty-two men killed and wounded in a few minutes. The survivors in their fury waited for no order to attack, nor regarded any formation. With one common impulse and with yells of wrath they rushed on. It was a bad quarter of an hour for the Turks; but the riflemen finding no signs of co-operation in the attack from the north by Prince Mirski, contented themselves with driving back the Turks some distance, and occupied the abandoned Turkish camp in the rear of the fortifications. On the same night, in reply to General Gourko's summons to the Turks to surrender and abandon the further unavailing defence of the pass, there came a letter from the Turkish commander, Mehemed Pasha, offering to surrender. Negotiations were entered into, and the hour for the surrender of the Turks was fixed for twelve o'clock the next day. An armistice was arranged, and early on that morning the sanitary detachments went forward to bring in the wounded which the rifle battalions had been forced to leave behind. They sent back word that the Turks had fled and vacated the position. The offer of surrender had been a *ruse* to gain time, and by daybreak the Turks had retreated safely toward Sophia.

Meanwhile, on the 18th, Prince Mirski had remained quiet, waiting for further information about Gourko's movements. But on the 19th, young Skobeloff, taking some troops of Mirski's, had pushed forward a *reconnaissance* into the pass from the north. To his surprise he met with no opposition as he passed line after line of fortifications, and he hastily abandoned Turkish camps, with fires yet burning, rations half cooked, and half-written telegrams. At length he reached the crest of the pass, and the view to the south opened before him. Here he saw the tents of General Gourko's camp spread out before him, and within an hour the two columns, Prince Mirski's and General Gourko's, had joined hands across the Balkans. The Schipka and Hainkoi passes were in the power of the Russians. This took place on July 19th, the positions then being as shown in the following sketch, I.

Thus was accomplished the march of General Gourko across the mountains, which

I—*Positions of Turkish and Russian Forces in the Balkans on July* 19.

was regarded at the time as a feat for which a parallel could only be found in the annals of the American war, which treat of Stonewall Jackson's celebrated cavalry raids. But, as we have seen, there was really nothing remarkable at all about it; and a study of sketch I, will show that the Russians were guilty of such stupendous blunders, that not even the Seraskeriat could avoid taking advantage of them in some small degree.

Looking at this sketch, we see that, starting from Tirnova, the Russians enclosed a circle which ran through two passes, the Schipka and the Hainkoi. But the circle was not complete. It was broken by the Travna Pass. Through this pass, whilst engaging the two others, the Turks might have pierced the very centre of the Russian alignment, and have turned both the Hainkoi and the Schipka, whilst Osman Pasha advanced from the west, and Mehemed Ali from the east. But the Turkish commanders either knew nothing of this pass, or they had not the energy to make it practicable, as General Gourko did with the Hainkoi Pass. This, however, does not excuse the Russians from having neglected it. At a later period, as we shall see, this neglect, had it been availed of by the Turks, might have cost them the whole campaign; and had any other staff but a Turkish staff been entrusted with the defence of the country, it is morally certain that it would have demanded all their exertions for the Russians to have escaped across the Danube.

Such was the military position in Turkey on July 19th, 1877. Generals Niepokoitschitzki and Levitzki had successfully blown their bubble. It was radiant with many colours. The blue Danube, the yellow cornfields of Bulgaria, the green forests of the Balkans, vied therein with the crimson of Kezanlik roses; and imaginative enthusiasts even thought they could discern the glittering waters of the Bosphorus, and the sheen of the crescent on the dome of St. Sophia. And ever more gorgeous grew the colours, and grew deeper and deeper in intensity, till the black spot began to appear where the bubble at last bursts. That black spot in the Russian bubble was Plevna; and it was to burst on the very next day.

CHAPTER XVIII.

THE SITUATION AT CONSTANTINOPLE.

THE news of the passage of the Danube, the fall of Nicopoli, the advance of Russians to the Lom and beyond the Balkans—all within three weeks—caused a perfect panic in Constantinople. The fugitives streaming into the capital from all directions, increased the confusion; and at Dolmabagtche, the Sultan's palace, the advisability of migrating to Broussa was seriously discussed. The ministry, of course, had to suffer for the misfortunes of the Turkish armies. The Minister for Foreign Affairs, Safvet Pasha, who already began to talk about suing for peace, and Redif Pasha, the Minister of War, as well as Abdul Kerim Pasha, were dismissed the day after General Gourko had joined hands with Prince Mirski across the Balkans. Redif Pasha and Abdul Kerim were banished to the island of Lemnos. The Sheikh-ul-Islam, Hairullah Effendi, was also dismissed, and succeeded by Kara Halil Effendi; whilst Mustapha Pasha was appointed Minister of War, and Mehemed Ali, an officer of Franco-German extraction—Charles Detroit by name, and born in Magdeburg—was nominated to the command of the army of the Danube in lieu of Abdul Kerim. Safvet was succeeded in the ministry for foreign affairs by Aarifi Pasha, Turkish ambassador in Vienna. South of the Balkans, Reouf Pasha was succeeded by Suleiman Pasha, who was recalled from his campaign in Montenegro to take charge of the armies in this direction.

Aarifi Pasha and the Sheikh-ul-Islam did not happily inaugurate their tenure of office. Whilst the Sheikh-ul-Islam excited the Mussulmans from the pulpit by the accounts of the cruelties their brethren were suffering at the hands of the Russians and Bulgarians, Aarifi Pasha addressed a circular note to the European powers, draw-

ing attention to, and protesting against the barbarities perpetrated in Bulgaria and the Dobrudja, and repudiating, on behalf of the Sultan, any responsibility if the Mussulman population should avenge itself, in other parts of the empire, upon the Christians.

This despatch was a ridiculous blunder. Rightly or wrongly, the public opinion of the masses in Europe had pronounced sentence against the Porte on account of the massacres in 1876; and naturally this last step of the Porte placed it, in the eyes of that same public opinion, in the position of the wolf who accused the lamb of being his enemy and oppressor.

Even Mr. Layard had to protest strongly against this policy of the new minister; and still more plainly did Prince Reuss, the German ambassador, speak on the subject to Edhem Pasha, the Grand Vizier, and protest against the language of Aarifi Pasha's note, which, he said, was calculated to incite the Mussulmans to reprisals on their Christian fellow-subjects. These representations, supported by those of all the other ambassadors, were so strongly urged, that Aarifi was forced to resign and yield up his post to Server Pasha. At the same time, the agitation in favour of a recall of Midhat Pasha was recommenced; but it led to no result, chiefly in consequence of the intrigues of Mahmoud Damat, the brother-in-law of the Sultan, who was persuaded by him that Midhat was his most dangerous enemy.

Not less intense was the excitement in London when the rapid passage of the Danube and the Balkans, which seemed to presage an early termination of the campaign, became known. When the Danube was passed, Admiral Hornby proceeded, on July 3, to Besika Bay with nine ironclads, followed within a few days by four more; and when Gourko had forced the Balkans, the garrison in Malta was reinforced by 3,000 troops. Sir A. Layard proposed to the Porte that the British fleet should pass the Dardanelles, and that Gallipoli should be occupied by British troops in order to assist in keeping order in case of any outbreak of the Mussulman population against the Christians. But the Porte replied, that unless England was prepared to enter into an offensive and defensive alliance with Turkey, they would not be able to give their consent to either of these measures; and that if, nevertheless, the Turkish government should insist upon carrying them out, it would be, at the least, under protest on their part.

This, however, the British government was not prepared to do; and in the debate in the House of Lords on July 19th—whilst Gourko's and Mirski's men were fraternising on the top of the Schipka Pass—Lord Derby declared, in reply to a proposal that England should offer her mediation, that he did not consider the time for such a measure had arrived; and that as for an armed intervention for the protection of British interests, that could be best effectuated at the close of the campaign, when both the combatants would be exhausted by the struggle, but England be fresh, in the full enjoyment of her power, and unembarrassed in any way. He had informed Count Schouvaloff, he continued, at what point British interests began, and which would be defended by force of arms; and Count Schouvaloff had thanked him for his frankness. But till those interests were seriously threatened, England would keep free from any engagements which might trammel her hereafter; and, for the present, would do no more than keep step with the course of events.

As for the other powers immediately concerned in the fate of Turkey, their action—or rather inaction—presents no points of interest. They all followed the example of England. In Hungary, the Magyars clamoured in popular meetings for intervention in favour of the Turks, just as, in England, popular meetings, under the leadership of Mr. Gladstone and John Bright, clamoured for intervention in favour of the Russian allies—Bulgar and Serb. These demonstrations had no effect, in either country, on the policy of the government. Austria-Hungary was aware, that let things turn out as they might, there was not much to fear from Russia; and that if they let things follow their natural course, Austria-Hungary would also be masters of the situation in European Turkey whilst England commanded in Asiatic Turkey. Bosnia and the Herzegovina would be there for them to take or leave as might be most advisable, according to circumstances. Greece was in the peculiar position of fearing the Russians more than she feared the Turks, yet had not the heart to take side with the Turks nor against them. Having seen how successfully Italy had acquired fresh territory year after year by fighting and being defeated, the Greeks thought it

would be rather a fine thing to try and acquire an extension of their positions by not fighting at all.

There was thus no help anywhere for the Turks; and, seeing that this was the case, and convinced that the struggle was one of life and death, they determined to do their best and die in harness.

On this point they were unanimous; and in no small measure were they justified in regarding the struggle as one of life and death, in regarding the war as one of extermination determined upon by the Russians, when the accounts came in of the cruelties to which their brethren were subjected on both sides of the Balkans, in revenge for what at least was, in the great majority of cases, but a sentimental grievance, exploited to the utmost by the Russians for their own purposes.

That the material condition of the Bulgarian peasant was very good, compared even with that of those in other far more favoured countries whose intelligence and moral qualities secured them a social position much higher than that of the Bulgarian, with much less national prosperity, is a fact acknowledged on all sides, even by the correspondent of the *Daily News*. The Thuringian peasant, the vintners of the Tyrol, of the Basque provinces, the clodhoppers of Suffolk, enjoyed social privileges immeasurably above those of the Bulgarian, with a quarter of the Bulgarian's material claims to consideration. But then the Thuringian peasant, the vintner and the clodhopper were animated by a very different sense of morals.

The character of the Bulgarian has been well drawn even by his friends; and a repulsive picture it is. It is all very well to talk of oppression having made him what he is; but his whole history, long before the Turks ever made their appearance, does not recommend him. The other races of the Turkish empire, Armenians, Greeks, Jews, Arabs, have all been subjected to the same course of oppression, but none of them have sunk to the moral depth of the Bulgar, excited to the full exercise of his worst qualities by the civilising Russ.

We have seen what the Russians and Bulgarians did at Biela and Kezanlik. At Sistova, between the period of the flight of the Turks and the entry of the Russian troops, the Bulgarians sacked and wrecked the Turkish houses without a single exception. The pillage and destruction were as sweeping and universal as if the place had been sacked by a victorious army after storming. There was not a whole pane of glass in the window of any Turkish house in all Sistova. The wrecked interiors presented an indescribable chaos of destruction. Cupboards were smashed, floors torn up, shelves torn down, stoves broken, in search of secreted money. The floors were strewn with miscellaneous *débris* and torn books printed in curious characters. Judging from the number of these in the better houses, the wealthier Turks of Sistova seem to have been a reading people. The furniture was broken in sheer wantonness, and the plaster shattered. The divans were broken up: in fine, the ruin was thorough and universal so far as the interiors of the houses were concerned. Nor was the destruction confined to the habitations. There were eight mosques in Sistova, and all were wrecked. Their interiors were scenes of indescribable destruction. The very railings were broken into small pieces, as if in the keen zest and gloating enjoyment of laying waste. The few Turkish shops and stores in Sistova were pillaged of everything valuable, and the fixtures of the interiors were smashed into fragments and splinters. Nothing Turkish in the place escaped wreck, and the aspect of uninjured dwellings intermingled with others reduced to the extremity of dilapidation was strange and significant; for whilst the Turks of Sistova, to judge by the wrecks of their residences, appear to have been a thriving people in a lazy, easy-going way, the Bulgarians showed few indications of having been materially oppressed, or had thriven wonderfully on oppression. Many of their houses were large and handsome. Paris fashions were not unknown to, or unstudied by, the Bulgarian ladies. To excuse their conduct, the Bulgarians asserted that the Turks were committing atrocities in the interior as they retired; but the correspondents with the Russian army, who had every opportunity to satisfy themselves on the point, stated that the conduct of the Turks, as they evacuated Bulgaria step by step, had a claim to the admiration of the civilised world. They heard once and again of isolated acts of cruelty—there were two Bulgarians with broken heads in the hospital at Zimnitza. But what did the world anticipate? Was it not that the retiring Turks would make Bulgaria a wilderness and a solitude? And how was this anticipation justified? In Sistova no Turk

touched the hair of the head of a Bulgarian, handled no scrap of the property of a Bulgarian. In the intervening villages the Bulgarian inhabitants abode under their unharmed roof-trees, with their flocks and herds around them, fearful only in the apprehension of the visits from the Cossacks, which they had already learned were not simple visits of politeness. The crops, uninjured, waved rich and ripe in the fields; the hay stood in cocks in the fields; there was corn, and wine, and oil, and meal in the land. What the people of Biela suffered in property was at the hands of lawless Russian straggling soldiers, not at the hands of the Turk, "unspeakable" though he may be. It is, indeed, not too much to say, that in acting thus the Turks acted erroneously, speaking in a purely military sense. If their military policy was that of retreat, the complement of that policy was to have left desolation behind them, not to leave a land flowing with milk and honey for the behoof of the invader. When Kutusoff and Barclay de Tolly retreated from Minks to the Beresina, and from Beresina to Smolensk, and from Smolensk to Moscow, before the legions of Napoleon, did they leave behind them a fat land, villages teeming with flocks and herds, growing crops asking for the sickle, granaries for the replenishment of the provision trains? We all know that they left desolation and ashes, and that the desolation and the ashes have counted to Russia for heroism and patriotism, and, what is more to the purpose, for sound military strategy.

But let the Turk have his due. If deficient in the legitimate resources of the military art, he for once, and from whatever motive, erred on the side of humanity. But it cannot be said that the Bulgarians appreciated his forbearance. We have told the story of the wreck of the Turkish quarter of Sistova. Bulgarian Biela was not quite so rough on Turkish Biela, but it wrought not a little mischief on the latter nevertheless. The Turkish Bey there was a good man, held in high esteem among the Christians, for he consistently protected them from the lawless exactions of the Circassians to the best of his power. The Bulgarian inhabitants besought him to remain, assuring him that they would speak of him in such terms to the Russians that no evil could befal him. But the Bey did not relish the outlook, and wisely departed with the people of his own nationality. One would have thought that the least the Bulgarians could have done would have been to have respected the good man's house; but not only was it sacked, the very floor was wantonly broken through. So much, then, for Bulgarian promises and gratitude.

Hearing all this, exaggerated ten-fold, no doubt, by the fugitives with the increase of their terror and the further they got on their flight, it is not to be wondered at that a fierce determination arose among the Turks so sell their lives and their property as dearly as they could. And that sale began on July 20th, and lasted for six months.

CHAPTER XIX.

THE FIRST ATTACKS ON PLEVNA.

WHEN the commander of the 9th corps proceeded against Nicopoli, he made the omission of protecting his flank by not sending cavalry to occupy Plevna, then only weakly held. Afterwards an easy chance did not offer. A Turkish column from Widdin, marching too late to succour Nicopoli, turned aside and occupied Plevna. With intent to repair the blunder, General Krüdener sent three regiments of infantry against Plevna, and without a previous *reconnaissance*. These, after hard fighting, actually occupied the town. They had laid aside their cloaks and packs in the streets, and had quitted the fighting column formation, believing all was over, and were singing as they straggled along. No patrols had been pushed into the recesses of the town. No cavalry had been sent forward beyond. The whole business was slovenly to a degree. The penalty was paid. Suddenly, from a hundred windows and balconies, a vehement fire was poured into the troops straggling along the streets. They were beset on all sides, and had to retreat. One regiment left its packs where they had been taken off in the street. During the retreat, more or less precipitate, 2,771 men and 66 officers were lost. One regiment lost nearly 2,000 men. Thus curtly was the first repulse of the Russians before Plevna made known to the world; and it was not until a month later that the details of the affair became published.

There was much controversy as to who was to blame for this catastrophe; but though it was generally assumed that Krüdener was responsible for it, yet, considering the fact that, after some temporary relegation, he was entrusted with the command of his corps as heretofore, the assumption is that the staff was entirely responsible for the mischance.

It was said that Krüdener had orders to occupy Plevna as soon as he had crossed the river. But it is clear that his orders were also to seize Nicopoli, and, by the same process of reasoning, Lovatz also; and it is clear that he had not men enough to carry out this triple operation. Krüdener may therefore be identified with the Russian staff, and the Russian staff identified with him. Both, no doubt, committed mistakes; and if, as Krüdener affirms, he could not help doing so, he should have resigned his command.

As a matter of fact, General Krüdener, occupied with the siege of Nicopoli, not only did not seize Plevna, but even withdrew the cavalry that had been sent there for that purpose to Nicopoli. As cavalry could hardly be used for the storming of redoubts, his object in doing this can scarcely be conceived, as he had quite enough men to prevent the Turkish garrison from cutting its way out. The only explanation is that he had some inkling of the presence of the Turks on his flank, and wished to secure himself from attack whilst occupied with Nicopoli. Had he even occupied Plevna immediately after the fall of Nicopoli, all might have been well. Had he even sent out the cavalry to ascertain where the Turkish army was, and give warning of its advance, all might still have been well. The neglect to occupy Plevna as long as he positively knew the Turkish army was still far away, would have been of slight consequence. But he did not send a single squadron to see whether that army was approaching Plevna or not, and the first detachment of his army marched into Plevna two hours after the Turks had arrived there, without having thrown out a scout or an advance guard, just as though they were marching through the district of Moscow. This in the enemy's country, within ten miles of an army of fifty thousand men. But, at the same time, it is evident that no such important and vital measure as the occupation of Plevna and the protection of the right flank, should have been or could have been left to the care of one man already occupied with an important siege.

The man who should have looked after this matter, and have ascertained that there was no possibility of the Turks seizing the important strategic position at Plevna, was General Levitski. He was practically the executive officer of the grand duke's staff, who had to look after details, see that orders were executed, find the best way of executing them, and who was, besides, the leading spirit in the military councils for the direction of the campaign in general. General Niepokoitschitzki was old, and did not take a very active part in affairs, so that it was Levitski who was the real chief of the staff, and mainly responsible for the direction of affairs. It may not be amiss to say a word about General Levitski here.

He was among the youngest generals of the army, and was appointed to his high position on account of the talent he displayed in the peace manœuvres at St. Petersburg. Here, on the level plains about the capital, where every inch of the ground and every road was known to him, where the fighting was done with blank cartridges, and there were neither killed nor wounded, General Levitski succeeded in handling an army corps very well, and usually won considerable advantages over his adversaries. Fighting a real war and handling an army of two hundred thousand men is, however, a different kind of thing from directing those peace manœuvres; and, besides the affair at Plevna, there were tactical faults in the distribution of the army for which he was answerable. The army had been, in fact, disposed of in the most unheard-of manner. Divisions, brigades, and even regiments were cut up, parcelled out, and sent to the four points of the compass, and dispersed so far that it was doubtful whether they would ever be able to unite again during the war. The 14th division, for instance, was an example of this. There was

a part of it on the road to Osman Bazar, a part at or near Elena, a part at Hainkoi, a part at Selvi, and a part at Tirnova—points that had no tactical connection with each other.

All this confusion arose from General Levitzki's miscalculating the forces required upon given points, and then remedying the mistake in a hand-to-mouth sort of way, by seizing troops wherever he could get them—a battalion here and a regiment there—to strengthen the respective positions. Then when news was received of the occupation of Plevna by the Turks, Lovatz should have been instantly seized by the Russians; and for two very good strategical reasons. In the first place, with the Turks at Lovatz it was just as impossible for the Russians to cross the Balkans as it was with the Turks in possession of Plevna. The possession of either of these points effectually checked the Russian advance, and Lovatz, equally with Plevna, was most important for the Russians as well as the Turks.

But even this was not all. A glance at sketch F will show that the road from Plevna to Sophia passes at no great distance from Lovatz, and that, consequently, had the Russians seized Lovatz as soon as the Turks occupied Plevna, they would have threatened the Turkish line of communications, and their best line of retreat. The possession of Lovatz was also indispensable for a successful attack upon Plevna, for it would have enabled the Russians to completely turn the Turkish positions on the south, and to have brought at least one more division—the 9th, then at Gabrova and Selvi—to the attack. In fact, the possession of Lovatz was so necessary to the Russians before attacking Plevna, that, had the Turks occupied it at the same time as Plevna, the Russians should have taken it before attacking Plevna at all. Yet a week or ten days elapsed between the seizure of Plevna and Lovatz by the Turks, and the Russian general-in-chief never thought of profiting by the opportunity thus offered him. The mistake, therefore, of allowing it to be seized and fortified by the Turks, was only less than that of allowing Plevna to fall into their hands. The capture of Plevna by the Turks was a surprise—caused by the most gross and culpable carelessness and stupidity, it is true—but it was still a surprise for the Russian staff. The same cannot be said of the capture of Lovatz; and the fact of their not having forestalled the Turks looks as though neither General Niepokoitschitzki nor General Levitski understood the importance of this strategical point until it was too late.

Under these circumstances, with the Turks in force at Plevna and Lovatz, orders were issued for the reinforcement of General Krüdener's troops. Part of the 4th corps, which was crossing the Danube at Zimnitza on their way to Tirnova, were ordered to proceed to Karagatch, where they were to rendezvous with Prince Schahoffskoi and the larger portion of the 11th corps, which had hitherto been engaged in the futile and thankless bombardment of Rustzuk, about which so much ink has been wasted. Then crossing the river at Zimnitza, the corps had marched on Tirnova, and hopes rose high in its ranks that for its soldiers no more would be the function of hewers of wood and drawers of water, but that they would cross the Balkans and see fighting and earn glory and crosses among the rose-gardens of the Tundja Valley. These hopes were shattered. A day's march from Tirnova the corps was ordered to bend to the east, and take up a defensive position on the line of a Turkish march from Schumla by way of Osman Bazar against Tirnova and the Russian communications between that place and the Danube. But, on the 20th of July, there came to the 11th corps the order for yet another long march to assist Krüdener, and it accomplished the distance from Kosarevatch, some twenty miles east of Tirnova, to the vicinity of Plevna, in six days, and that in the intense heat of the summer.

At the same time the 9th corps came up from before Nicopoli, under General Krüdener, who sent General Skobeloff to take the command of a brigade of Circassian Cossacks, with which he was to operate against Lovatz and protect the Russian left flank.

On the morning of the 29th, Prince Schahoffskoi and his head-quarters moved from Karagatch, and first went forward some distance on the direct road towards Plevna, and advanced into the vicinity of Grivitza, without seeing anything of the enemy. The head-quarters were faithfully followed at a very short interval by the whole of the head-quarter baggage train. Now, the head-quarter baggage train of a Russian general commanding an army corps, and of his staff, is no light thing. Lord

Albemarle tells us, that in 1828, in the Russian column which crossed the Balkans under General Diebitsch, every general officer had his caleche. With the Russian army, it is not alone that every general officer has his carriage—most have more than one—but the larger proportion of field-officers have vehicles also. On Prince Schahoffskoi's staff there was a baggage waggon between every two officers, and a surprising number of miscellaneous vehicles besides. The chief of the artillery had a travelling chariot drawn by four horses, driven after the manner of a four-in-hand. Servants swarmed; and every servant contrived to find a place in or on a vehicle of some kind or other. The staff train was half a mile long if it was a yard, to say nothing of escort, suttlers, and the priest, who rode in a vehicle of his own. A train such as this must always be a great embarrassment and impediment; even in an advance with favourable means of communication it is an incumbrance; in retreat, along bad roads, it must be a nuisance of the most abominable character; and here it was following the staff beyond the outposts, until it was countermarched with considerable precipitation, when the chief turned his horse's head and rode backward within his own forepost line, to the bivouac ground, near Poradim.

Here, all night, the troops lay on the grass, with tents struck and horses saddled, waiting for an *alerte*. It was believed that it was the intention to make the attack on July 30th, and that the preliminary positions were to be taken up under cover of the darkness. Fires were made up as if the army were remaining in its positions, with intent to delude the enemy, whilst waiting for orders from General Krüdener; but they came not. About midnight, two officers rode to him from Prince Schahoffskoi, and brought back instructions that he meant to delay the attack, partly because some of the troops had not come up far enough, and partly to rest the whole after their long and fatiguing march. So about four o'clock in the morning the troops pitched tents again, unsaddled their horses, and lay down on their cloaks for a long unbroken welcome sleep, for the troops were sorely worn with incessant marching, and the cavalry horses were almost exhausted. One great anxiety was relieved. Reports were brought in that no more Turkish troops were marching from Plevna on Lovatz. This removed apprehension of a flank attack in force from Lovatz on the left of the Russian converging assault upon the Plevna position. Krüdener and Schahoffskoi thus considered themselves free to concentrate their attention on the latter place, leaving Skobeloff and his cavalry to watch Lovatz, and, indeed, if possible to occupy it.

During the day (July 30th) the outposts were advanced, and the whole army crept up somewhat closer, the *reconnaissances* feeling the Turks at Radisevo, Tucenitza, Bogot, and Slatina, whilst Skobeloff ascertained that not only was Lovatz strongly held, but was being still further reinforced, and that the Turks also held the line of villages between Plevna and Lovatz with detachments of infantry and cavalry.

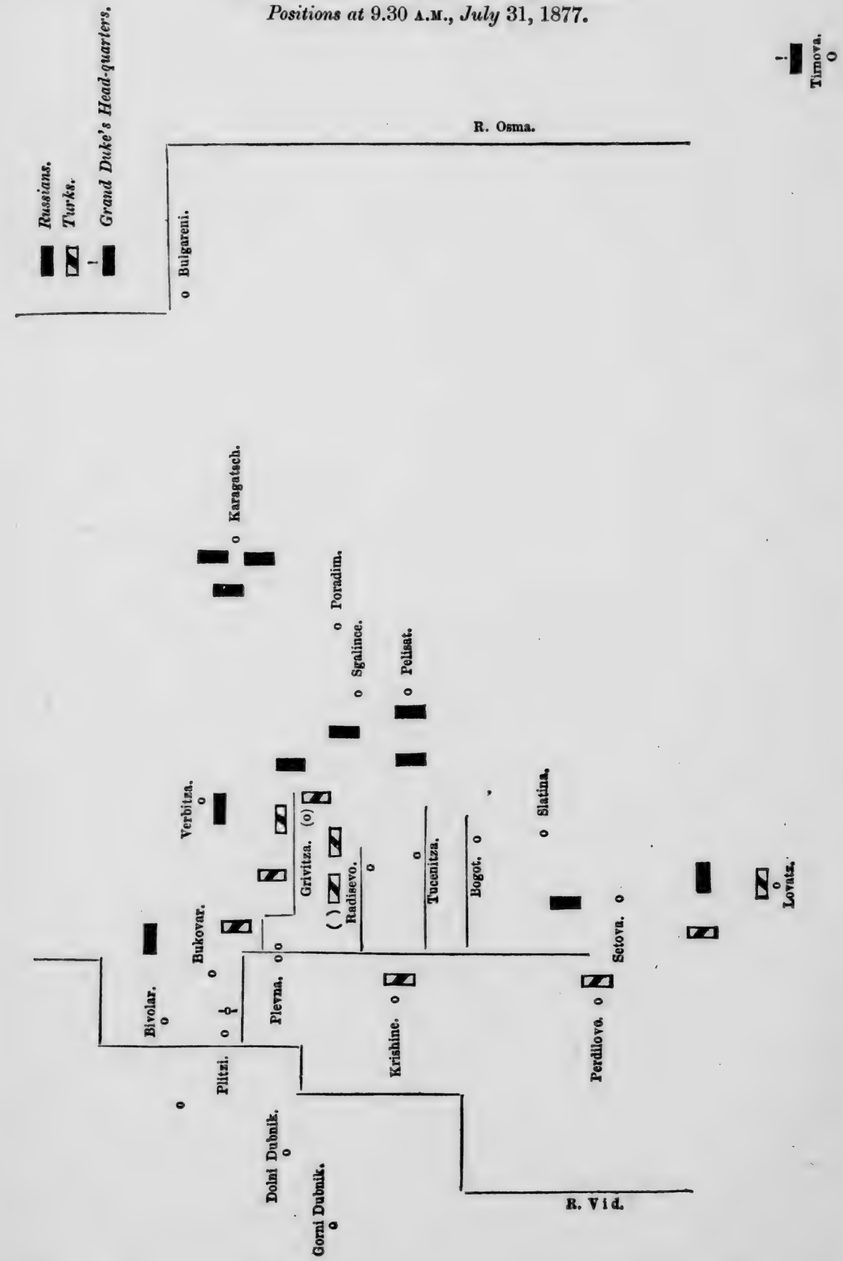
In the afternoon a general council of war was held at Poradim, at which were present Baron Krüdener, Prince Schahoffskoi, and the generals of division and brigades. The colonels of regiments and staff officers waited to receive instructions as to the final dispositions. It was settled that the action should begin next morning, July 31st, at five o'clock by a general concentric advance on the Turkish positions in front of Plevna, and that Prince Schahoffskoi and the general staff should move forward at four o'clock. Several aides of the Grand Duke Nicholas arrived, and were detailed to various points to make observations, and after the battle to carry reports of the results back to Tirnova. The gravity of the task before the army was fully recognised, for *reconnaissances* had proved the Turks to be in greater force than was at first believed. Twenty thousand regulars had come from Widdin, and the Turkish positions were known to be strong by nature, and strengthened yet further by art.

The night between the 30th and 31st was very wet, and troops did not begin to march forward before six instead of four.

The number of infantry combatants was actually about 32,000, with 160 field cannon and three brigades of cavalry. Baron Krüdener was on the right with the whole of the 31st division in his fighting line, and three regiments of the 5th division in reserve at Karagatch. He was to attack in two columns, a brigade in each. On the left was Schahoffskoi with a brigade of the 32nd division and a brigade of the 30th division in fighting line. Another brigade of the 30th division was in reserve at Pelisat. The Turkish position was convex, somewhat

in horseshoe shape, but more pointed. Baron Krüdener was to attack the Turkish left flank from Grivitza towards the river Vid. Schahoffskoi was to assail their right from Radisevo, also towards the river Vid. On the left flank of the attack stood Skobeloff, with a brigade of Cossacks, a battalion of infantry, and a battery, to cope with the Turkish troops on the line from Plevna to Lovatz, and to hinder them from interfering with the development of Schahoffskoi's attack. On the right flank stood Lascareff, with a brigade of the 9th cavalry, to guard Krüdener from a counter flank attack.

The main fault of the dispositions was, that Krüdener and Schahoffskoi were practically independent of each other, that the two attacks were too far apart, and without a connecting link; but the gravest evil, which did not rest with the commanders on the spot, was the weakness of the assailing force. After the previous reverse nothing should have been left to chance, and it was tempting Providence to attack the Turks in a strong defensive position with inferior numbers.



The morning was gloomy, which the Russians regarded as a favourable omen. The troops cheered vigorously as they passed the general. Physically there were no finer men in the world. In the pink of hard condition, and marching without packs, carrying only great-coat, haversack with rations, and ammunition, they seemed fit to go anywhere and do anything. Schahoffskoi's right column marched over Pelisat and Sgalince. The left column headed straight for Radisevo. The artillery were pushed forward from the first, and worked independently. Krüdener, on the right, opened the action at 9.30 A.M., bringing a battery into fire from the ridge on the Turkish redoubt above the village of Grivitza. At first it seemed as if the Turks were surprised. It was some time ere they replied; but then they did so vigorously, and gave quite as good as they got from Krüdener. Meantime Prince Schahoffskoi bore way towards Radisevo, the position at this time (half-past nine) being as is shown in the following sketch (J, No. 1).

Plevna lies in the hollow of a valley, lying north and south. The ground which intervened between the Russians and this valley was singularly diversified. Imagine three great solid waves with their faces set edgeways to the valley of Plevna, and therefore end on to the Russians also. The central wave was the widest of the three, and *à cheval* of it were the main Turkish positions, of which there were three, one behind the other. Although the broadest wave, it was not the highest. The right and left waves were both so high, that one on the crest of either could look down across the intervening valleys into the positions of the central wave. But then the Turks were astride of all three waves. The crest of the ridge above Radisevo they did not hold in force. Thus far Prince Schahoffskoi was fortunate; but on the most northerly wave of the three, that against which Baron Krüdener was operating, and which was broader and flatter, the Turks had intrenched position behind intrenched position. Both on the top of this ridge and of the central swell stood the camps of Turks with tents all standing behind the earthworks, as if they had taken a lease of the ground in perpetuity.

Baron Krüdener's cannon had opened fire, not only in front of Grivitza, which was the toe of the horseshoe, but against its northern flank also. The return fire, however, was so heavy that he made no way, and for the time, at least, was fast held. Schahoffskoi's artillery tried to aid him from the crest of the ridge by bringing a battery into action against the Grivitza earthwork; but the traverse of the redoubt was so high that it did no harm. At noon the whole attention of Schahoffskoi's forces was concentrated on Radisevo.

This village lay in a deep valley behind the southern wave or ridge of the Turkish position, and there was another ridge behind this valley. On that ridge the Russian artillery, placed by Colonel Bischoffski, chief of Prince Schahoffskoi's staff, were firing in line on the Turkish guns on the ridge beyond the valley, with fine effect. The infantry went down into the valley under this covering fire and carried Radisevo with a trivial skirmish, for in the village there were only a handful of Bashi-Bazouks, who, standing their ground, were promptly bayonetted. The Russian infantry remained under cover of the village whilst the batteries prepared the way. These, firing with great rapidity and accuracy, soon compelled the Turkish cannon to quit the opposite height, and it was then practicable for the batteries to cross the valley passing through Radisevo and come into action in the position vacated by the Turkish guns. Following them, the infantry also descended into the hollow, and lay down in the glades about the village,

Positions at 9.30 A.M., *July* 31, 1877.

and on the steep slope behind the guns in action.

Presently the five batteries were ranged along the crest of the ridge beyond Radisevo, directing a converging fire on the Turkish guns on the central wave or ridge beyond. Notwithstanding their exposed position, their fire was heavy and steady over the village of Radisevo, into which were falling many Turkish shells, which flew over the ridge occupied by the Russian cannon. It was strange to witness the peasants standing in bewildered groups in front of their houses with the children playing unconcernedly about the dust-heaps, and enjoying themselves without misgiving as to danger whilst the shells were crashing into the place. Still not a single peasant was injured by the shell-fire, although several hundred shells must have fallen in the village. In the Turkish positions, four batteries were defending the earthwork about the little village, which seemed to be the foremost of the fixed and constructed positions on the central ridge. It stood on a little knoll, and was well placed for searching with its fire the valleys by which it could be approached. Beyond were more, and yet more, earthworks right to the edge of the broad valley, where the roofs and church towers of Plevna sparkled in the sunshine from out a circle of verdure. The place had an aspect of serenity strangely contrasting with the turmoil of the cannon-fire raging in front of it. It seemed so near that a short ride would have brought one there to breakfast; yet, ere it could be reached, much blood would have to flow. Already men were dropping fast in the battery, for the position of the guns was greatly exposed, and the Turkish practice was mostly very good.

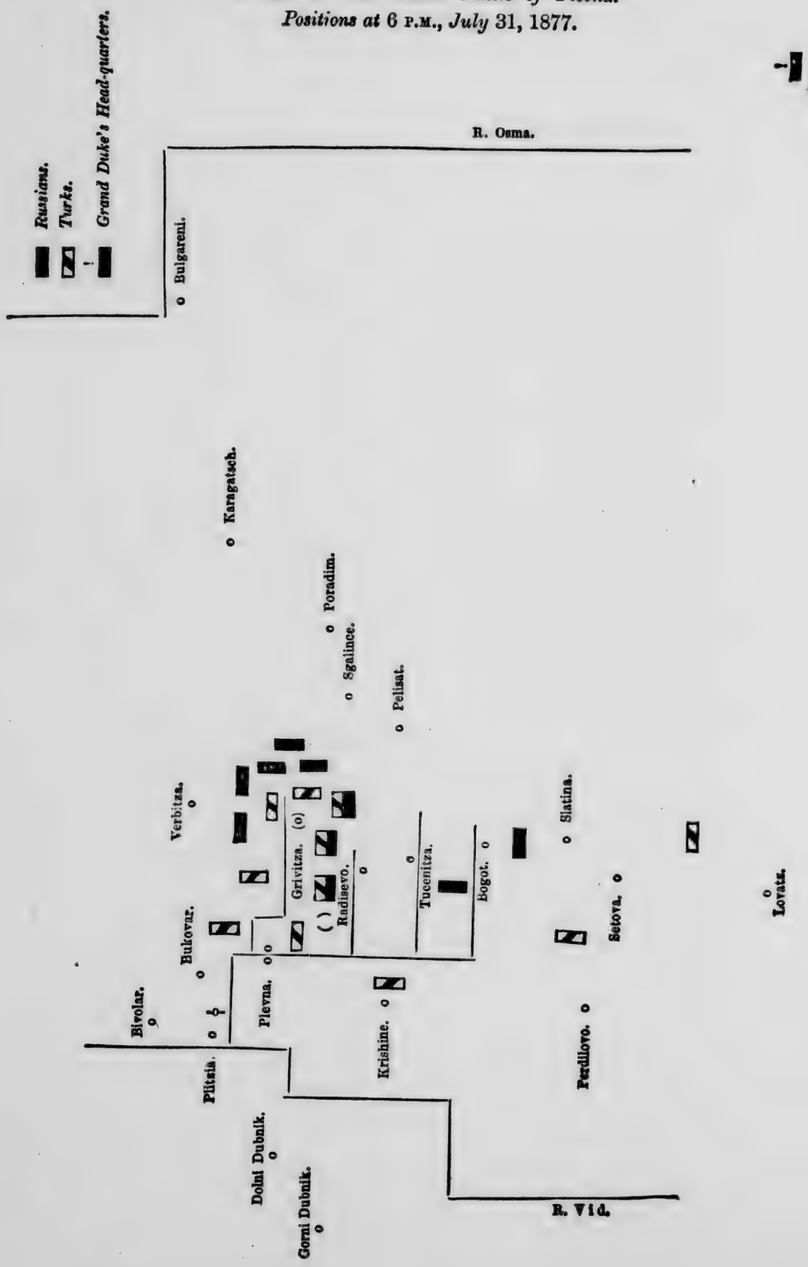
Up to one o'clock the infantry had nowhere been engaged. The operations hitherto had been confined to the artillery. Krüdener, on the right flank, had scarcely progressed at all, and his co-operation in a simultaneously combined attack on both flanks was indispensable to success. He seemed little farther forward than at the commencement, whereas Prince Schahoffskoi was at comparatively close quarters, and within striking distance. Krüdener was behind, either because his attack was not pushed energetically, or because he was encountering obstacles which the left wing had not met. But Krüdener was generally regarded as a slow soldier and an unenergetic man, and Schahoffskoi, in his impatience, determined to act independently, and strike the Turks single-handed. If Krüdener was slow, Schahoffskoi was rash. If the whole force was too small for the work, how much more so was one-half that force? Fearful was the retribution exacted for that error of judgment.

About half-past two the second period of the battle commenced. To ascertain whether the artillery had sufficiently prepared the way for the infantry to act, Schahoffskoi and his staff rode on to the ridge where the batteries were firing, and had to dismount precipitately under a hurricane of shell-fire which the Turkish gunners directed against the little group. A long and anxious inspection seemed to satisfy Schahoffskoi and the chief of his staff that the time had come when the infantry could strike with effect. This conclusion was arrived at in the face of the fact that the left flank attack had but three brigades all told, one of which constituted the reserve. In other words, he was about to launch ten or twelve thousand men against commanding intrenched positions held by an immensely superior force, and no whit crushed by preliminary artillery fire.

Two brigades of infantry were lying down in the Radisevo valley, behind the guns; the 32nd division—General Tchekoff's brigade—on the right, the 1st brigade of the 30th division on the left. The leading battalions were ordered to rise up and advance over the ridge to attack. The order was hailed with glad cheers, for the infantry had been chafing at their inaction, and the battalions, with a swift, swinging step, streamed forward through the glen and up the steep slope beyond, marching in company columns, the rifle companies leading. The artillery had heralded this movement with increased rapidity of fire, which was maintained to cover and aid the infantry when the latter had crossed the crest and were descending the slope and crossing the intervening valley to the assault of the Turkish position. Just before reaching the crest the battalions deployed into line at the double, and crossed it in this formation, breaking to pass through the intervals between the guns. The Turkish shells whistled through them as they advanced in line, and men went down in numbers; but the long undulating line tramped steadily over the stubbles of the ridge, and crashed through the undergrowth on the descent beyond. No skirmishing line was thrown out in

advance. The fighting line remained in the formation for a time, till, what with impatience and what with men falling, it broke into a ragged spray of humanity, and surged on swiftly, loosely, and with no close cohesion. The supports were close up, and ran up into the fighting line independently and eagerly. It was a veritable chase of fighting-men impelled by a burning desire to get forward and come to close quarters with the enemy firing at them there from behind the shelter of the trenches.

Presently all along the face of the advancing infantry burst forth flaring volleys of rifle fire. The jagged line of flashes sprang onward through the maize-fields, gradually assuming a concave shape. The Turkish position was neared. The roll of rifle fire was incessant, yet dominated by the fiercer and louder turmoil of the artillery above. The ammunition waggons hurried up to the cannon with fresh fuel for the fire. The guns redoubled the energy of their cannonade. The crackle of the musketry fire rose into a sharp continuous peal, and the supports that had remained behind, lying just under the crest of the slope, were pushed forward over the brow of the hill, over the dead and the severely wounded, lying where they fell on the stubbles and amid the maize. Still the living wave of fighting-men poured over them ever on and on until the Turkish cannon-fire began to waver in the earthwork. More supports streamed down with a louder cheer into the Russian fighting line. Then there was a wild rush, headed by the colonel of one of the regiments of the 32nd division, and the rest of the officers waving their swords. The Turks in the shelter-trench held their ground, and fired steadily, and with terrible effect, into the advancing forces. The colonel's horse went down, but the colonel was on his feet in a second, and, waving his sword, led his men forward on foot; but only for a few paces; a moment afterwards he was killed.



The men, however, kept on, and charged with their bayonets over the parapet and shelter-trench, and in among the Turks like an avalanche, and with this rush the outer edge of the first position was won. Still it took them half-an-hour from the shelter-trench before they again converged and made their final rush at the main earthwork. This time the Turks did not wait for the bayonet-points, but with one final volley abandoned the work, and fell back in a huddled mass into the gardens and vineyard behind the position, cramming the narrow track between the trees to gain the shelter of their batteries in the rear of the second position.

So fell the first position of the Turks. Being a village, it afforded ample cover, and Schahofskoi would have acted wisely had he been content to hold it and strengthen it till Krüdener, on his right, should have carried the Grivitza earthwork, and come up in line with him. But the Grand Cross of St. George dangled before his eyes, and tempted him to rashness. Krüdener was clearly jammed. The Turks were fighting furiously, and were in unexpected force on that broad central ridge of theirs, as well as against Krüdener. The first position, in natural as in artificial strength, was child's play to the grim starkness of the second on the isolated mamelon with the batteries on the swell behind it. But Schahofskoi determined to go for it, and the word was again, "Forward!" The first rush, however, was out of the men. Many must have been blown. They hung a good deal in the advance, exposing themselves recklessly, and falling fast, but not progressing with much speed.

Still Schahofskoi kept his finger well on the throbbing pulse of battle. Just in the nick of time half his reserve brigade was thrown into the fight immediately below, while the other half took part in the attack more on the left flank. The new blood told at once. There was a move forward, and no more standing and craning over the fence. But the Turks on the flank in the earthwork were also reinforced, and all of a sudden the white smoke spurted forth all along the lip of the epaulement, on the swarms of dark-clothed men scrambling on to it. There was a short but sharp struggle for the possession of the earthwork on both its flanks, till, at about 6 P.M., the Turks pressed forward a heavy mass of infantry for its recapture. Schahofskoi took a bold step, sending two batteries down into the first position he had taken to keep them in check. Here Russians and Turks were locked awhile in a deadly embrace (sketch J, No. 2); but the Turks were not to be denied, and, in spite of the most determined fighting of the Russians, had reoccupied their second position before seven. The battle was lost.

The first brigade of the 30th division had early inclined to the left, in the direc-

Positions at 6 P.M., *July* 31, 1877.

tion where the towers and houses of Plevna were visible. It was rash, for the brigade was exposing its right flank to the Turkish cannon astride of the central ridge; but the goal of Plevna was a keen temptation. There was no thoroughfare, however. They would not give up, and they could not succeed. They charged again and again; and when they could charge no more from sheer fatigue, they stood and died, for they would not retire. The reserves came up, but only to swell the slaughter. And then the ammunition failed, for the carts had been left far behind, and all hope failed the most sanguine, as the sun sank in lurid glory behind the smoke-mantled field.

Two companies of Russian infantry did indeed work round the right flank of the Turkish works, and dodge into the town of Plevna; but it was like entering the mouth of hell. On the heights all round the cannon-smoke spurted out, and the vine-yard in the rear of the town was alive with Turks.

Schahofskoi had not a man left to cover the retreat. He had staked all his men on the game, and he had lost them at the game irretrievably. The Turks struck without stint. They had the upper hand for once, and were determined to show that they knew how to make the most of it. They advanced in swarms through the dusk on their original first position, and recaptured their three cannon the Russians had previously taken before these could be withdrawn. The Turkish shells began once more to whistle over the ridge above Radisevo and fall into the village behind, crammed with wounded, the streams of whom wending their painful way over the ridge were incessant. The badly wounded mostly lay where they fell. Later in the darkness the Bashi-Bazouks swarmed over the battle-field, and smote and spared not. Lingering there on the ridge till the moon rose, the staff could hear from down below, on the still night air, the cries of pain, the entreaties for mercy, and the yells of blood-thirsty fanatical triumph. It was indeed an hour to wring the sternest heart. They stayed there long, to learn, if it might be, what troops were coming out of the Valley of the Shadow of Death below. Were there, indeed, any at all to come? It did not seem as if it were so. The Turks had the range again before dark, and the escort and the retreating wounded were often struck. A detachment of cavalry at length began to come straggling up to take over from the staff the forepost duty on the ridge; but it will give an idea of the disorganisation to say, that when a company was told-off to cover somewhat the wounded in Radisevo, it had to be made up of the men of several regiments.

About nine o'clock the staff quitted the ridge, leaving it littered with groaning men, and moving gently lest they should tread on the prostrate wounded. The staff soon lost their way as they had lost their army, and could find no rest for the soles of their feet, by reason of the alarms of the Bashi-Bazouks swarming in among the scattered and retiring Russians. At length, at one in the morning, having been in the saddle since six on the previous morning, they turned into a stubble-field, and, making beds of the reaped grain, commander, correspondent, and Cossack alike rested under the stars. But they were not even then allowed to rest. Before four an alarm came that the Bashi-Bazouks were upon them, and they had to rouse and tramp away. The only protection of the chief of what in the morning was a fine army was a handful of wearied Cossacks. About the Bashi-Bazouks there is worse to tell. At night they worked round into Radisevo, and, falling upon the wounded there, butchered them without mercy.

Krüdener, too, sent word that he had lost severely, and could make no headway, and had resolved to fall back on the line of the river Osma, which falls into the Danube near Nicopoli. There had been a talk, his troops being fresh, of renewing the attack the next day with his co-operation; but it is a plain statement of fact that Schahofskoi had no troops to attack with: 5,000 men, out of three brigades, had been lost, besides Krüdener's losses.

In fact, the Russian army before Plevna was completely broken up and dispersed. The regiments, compacted in strong positions at daybreak, were broken up into three streams of fugitive groups, panic-stricken, confused, wearied, harassed, hurrying away through the dark night across the broken country towards Karagatch, where they had started from confident of victory, and further on still to Bulgareni on the Osma. Skobeloff also had been severely handled, losing 300 men out of one battalion, and had also been forced to retreat before the advancing bodies of Bashi-Bazouks and Circassians. The fol-

lowing sketch (J, No. 3) gives a graphic picture of the field during the night of July 31st to August 1st; and it also shows how ill-advised the Turks were not to have followed the flying movements of the Russian army, at least to the banks of the Osma, and then have intrenched themselves. Had Osman Pasha boldly advanced, striking blow after blow, and had he been supported by Mehemed Ali, who had succeeded Abdul Kerim on the Lom, the Russians might have been crushed on the Yantra and forced back across the Danube.

Not a Russian soldier stood between Tirnova and the victorious Turkish army in Lovatz and Plevna. Only a weak division of the 11th corps stood between Tirnova and the Schumla army. Thus, north of the Balkans—the 8th corps being already committed to the mountains—there was but the 9th corps (already roughly handled, once at Nicopoli and again previously at Plevna), one division of the 11th corps, and the Rustzuk army. But if the Rustzuk army were marched to the west against Plevna, then the Turkish army of Rustzuk would be let loose on the Russian communications to Tirnova, and the advance over the Balkans be seriously compromised. The Russian strait was so bad that the scattered detachments were called up from Roumania, and a Roumanian division, commanded by General Manu, ordered up to the line of the Osma River, whilst the Grand Duke Nicholas precipitately left Tirnova, and hurried up to Bulgareni to check the headlong flight of his shattered armies.

The following letter, from the *Daily News*, describes the state of the defeated Russians the night after the battle:—

"Bucharest, August 2nd.—It was the evening of the battle of Plevna. The sun was going down behind the smoke-mantled heights, in a glow of lurid crimson. The dusk was fast settling on one of the bloodiest battle-fields of the century—closing in round the batteries whose guns were still firing, round detached parties of Russian soldiers who were doggedly maintaining the fight against the swarms of Turks who formed a ring around them, firing fiercely into their midst—round the dead and the wounded lying thick on the stubbles, on the grassy slopes, in the hollows among the maize plants and the oak copses—round the knots of wounded who had crawled for cover to the leeside of the grain-stacks on the fields, and who lay there in the unspeakable agony of waiting for the inevitable doom which they knew too well was to befall them—round the groups of miscreants tramping about the battle-field intent on wreaking that doom on the defenceless wounded, and stopping ever and anon to perpetrate some barbarity. Prince Schahofskoi and his staff stood on the summit of the ridge above the village of Radisevo, which was crammed with wounded men. The fate of the battle had hung in the scale for some time, but now all hope of success had gone. There was no reserve among us in the acknowledgment that the attack had been a failure; all the concern now was to do what was possible towards minimising the results of that failure. There was no conversation; men's hearts were too heavy for talk. We sat about on the knoll, gazing down into the pandemonium below. The general, alone and apart, paced up and down a little open space in the oak copse, gloom settled on his face. All around us the air was heavy with the low moaning of the wounded, who, having limped or been aided thus far out of the fight, had cast themselves down to gain a little relief from the agony of motion. There was not even water for them, for Radisevo is all but a waterless village, and what water trickled in a tiny rill from the fountain behind the village was struggled for eagerly by the parched and fevered wounded who crowded around it, coveting with a longing, the agony of which the reader can never know, a few drops of the precious fluid. I cannot tell when I most respect and admire the simple honest Russian soldier—whether when he is plodding along without a murmur verst after verst, under a burden just double in weight that which our soldiers carry, cheering the way as he tramps with a lusty chorus; or when, with cheers that ring with sincerity, and with an alacrity which is genuine, he presses forward into the battle; or when he is standing stubbornly confronting his enemy, conscious of being over-matched, yet never dreaming of running away; or when he is lying wounded but uncomplaining, helping his neighbour in the same plight with some trifling act of tender kindness, and waiting for what God and the Czar shall send him, with a patient, unmurmuring calm that is surely true heroism.

"The darkness closed in around us, and

J—No. 3.—*The Second Battle of Plevna.*
Positions at 9 P.M., *July* 31, 1877.

the enemy seemed bent on following the example of the darkness. We had been on this ridge for a long time beyond the range of the enemy's batteries; but now these were advanced, and we were once more under fire. Through the darkness we could see the flashes of the cannon-shots; they must be back now in the position on the knoll below—the position where, four hours ago, the Russian soldiers had charged home with the bayonet, and whence, two hours ago, the Russian cannon had been firing. A second more, and nearer and nearer came the whistle of the shells, with a swiftly gradual crescendo into a scream as they sped over us and crashed down into the village in the valley behind us; and yet nearer there was the flashing of the musketry fire in the darkness: one could watch the streaks of flame foreshortened down in the valley there; and nerves tried by a long day of foodlessness, excitement, fatigue, and exposure to the sun and the chances of the battle-field, quivered under the prolonged tension of endurance, as the throbbing hum of the bullet sped through or over the straggling group. No man dared to say to that stern lowering chief, eating his heart there in the bitterness of his disappointment, that it was a bootless tempting of fortune to linger longer on this exposed spot; nor did any man care to quit, for the sake of greater safety, the companionship which had endured throughout the day. So we lingered on till our senses became dulled, until some dropped off into slumber, regardless of the scream of the shells and the hum of the bullets. It was a humane object which so long detained the general in a position so long exposed. There was no force available to line the height, and cover, to ever so little extent, the wounded lying on and behind it from the Bashi-Bazouks, who too certainly were prowling in the vicinity, and ever coming nearer and nearer. An attempt had, indeed, been made to get together a detachment of infantry for this purpose, and a bugler, at the general's order, persistently sounded the assembly; but the result was merely to gather a handful of stragglers from half-a-dozen different regiments; and although but a company was wanted, that trivial strength could not be collected; so the general, his staff, and his escort took up for the time a kind of informal forepost duty, and there we waited till the pale calm moon rose and poured the sheen of her white radiance over the battle-field. While it was yet dark there had been no cessation of the firing, both artillery and musketry; and now that heaven was holding a candle to hell, the fire waxed warmer and brisker. Up from out of it, with broken tramp, came a detachment, silent, jaded, powder-grimed. There could not have been a company all told; a lieutenant marched at its head, and it was the remnant—so far as could be gathered the sole remnant—of one of the finest regiments of the 32nd division, that had crossed the ridge over which its *débris* was now listlessly trailing itself three fine battalions strong.

"At length the jingle of cavalry accoutrements was heard, and a squadron of dragoons rode on to the heights, and extending in skirmishing order, relieved the head-quarter staff. It was a poor screen to interpose between a victorious and remorseless army and a mass of wounded men; but nothing more was available. The general had lost an army, the fragments of an army had lost their general. We turned the heads of our jaded horses, and, silent and depressed, rode down the slope across the valley and up the slope beyond. Our pace was a slow walk, for there were wounded men everywhere, limping along the narrow pathway in front of us, prostrate on the grass by the side of it, or asleep in the very dust. Occasionally we struck detachments of infantry who had scrambled back out of the fight, and were lying on their arms in utter ignorance of the best direction in which to march. Or it might be a battery of artillery, halted in perplexing dubiety whether if they went on they might march into the bosom of the Turkish army. I believe there existed some intention that we should go for the night to a village called Bogot. But we got confused as to the road, and bewildered by the crackling spurts of musketry fire that broke out all around in the most uncomfortable fashion. Were the Turks then wholly round us, that we heard, and occasionally felt, fire as it seemed to north, to south, to east, and to west? Once such was the confusion that we were fired upon by a detachment of Russian troops, halted in equal bewilderment with ourselves, and expecting an enemy from any or every side. We made halt after halt, but there never was rest for us. A spurt of near firing would stir us, or a Cossack would ride in with intelligence that Bashi-Bazouks were prowling near by; and through all this

harassment there yet lingered with the most sanguine of us the idea that the battle would be resumed next morning, we affording an artillery support to the supposedly fresh troops of Krüdener. Where, I asked myself, is our artillery to take orders for such a purpose? We did not know where we were ourselves, much less where the army was, of which this groping, forlorn, dejected band were the head-quarters. Of Krüdener's experiences or whereabouts we knew simply nothing. It was useless to despatch aides-de-camp or orderlies without being able to give them a direction in which to ride. All we knew was that everywhere there were wounded men about us, and that we and our horses were dead beaten.

"Nature will assert herself. About one o'clock in the morning we turned aside into a field where the barley had been reaped and piled into small stacks. These we tore down, shook some sheaves out as fodder for our horses, and others as beds for ourselves, and, throwing ourselves down, fell into dead slumber. But there was no long rest for us. At three o'clock we were aroused by the tidings that the Bashi-Bazouks were close to us, and the near firing told of the accuracy of the statement. We huddled a number of wounded into and upon some carts which came up casually, and started them off, whether in the right direction or not we had no conception. Ugh! how miserably raw and chill struck the bleak morn just before the dawn! But if the rawness of the air struck to our marrow, hale and sound men as we were, what must have been the sufferings of the poor wounded, weakened by loss of blood, faint in the prostration which follows so inevitably the gun-shot wound; foodless, without water, lying on the damp grass by the wayside in their blood-clotted clothes! Yet happy they, pitiable as was their plight, in comparison with their fellows who had littered the battle-field, and had been left behind in Radisevo. The fate of the former we knew from what we had ourselves seen; of the latter, it was told to us by scared messengers, that the Bashi-Bazouks had in the dead of night worked round our left flank, and had fallen upon them and butchered them in their helplessness."

The reverse of the Russians was thus as complete as the inability of Osman Pasha and Mehemed Ali allowed. This inability permitted the grand duke to stay the tide of retreating and disheartened troops; and after a while, with the assistance of reinforcements and the Roumanian corps, to regain possession of their positions before Plevna. Here, broken, disallusioned, we leave the Russian army of Plevna in what would have been the most critical position had the Turks been able to turn their success to advantage, and will now turn to the advance forces under General Gourko, and see how the Plevna reverse affected operations in this quarter.

CHAPTER XX.

GENERAL GOURKO'S ADVANCE AND RETREAT.

LITTLE suspecting what a terrible blow was awaiting the army before Plevna within the next two days, General Gourko was ordered, by the commander-in-chief, to advance with three columns from Kezanlik and converge upon Yeni Zagra, in order to seize and occupy the district south of the Kara Dagh mountains, and cut the line of communication of the Turks with the railway at Yamboli and the western portion of Roumelia towards Philippopoli and Sophia.

Here the Turkish government had placed Suleiman Pasha, who had successfully marched through Montenegro, at a great expenditure of blood, in the command of the army of the Balkans. Taking up his head-quarters at Adrianople, he energetically began to organise his troops in view of the impending irruption of the Russians, which he fully expected, and to construct intrenchments and earthworks at the most important points to delay the advance of the enemy.

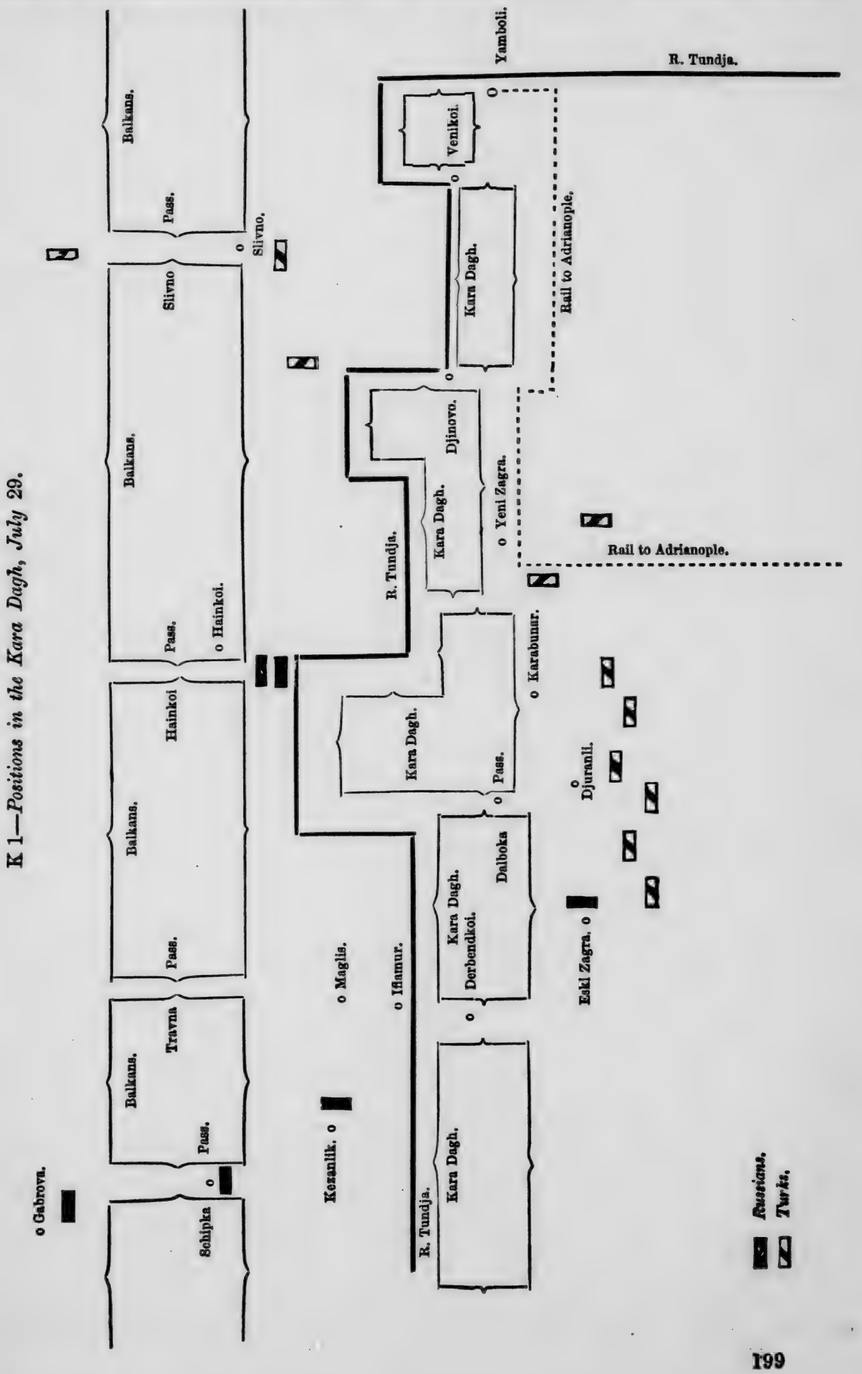
A reference to sketch D, page 154, will show Suleiman's general plan. It was to draw together the forces distributed in a circle at Sophia, Philippopoli, Adrianople,

and Slivno, and to converge with them at the Schipka Pass, the keystone of their position, whilst at the same time keeping his communications open with Osman Pasha on his left flank by way of the Orkhanieh Pass, and, on his right flank, with Mehemed Ali, by way of the Slivno Pass.

This plan was good strategy, but it demanded a sufficient number of troops, and premised the certainty of forcing the Schipka. Unless this certainty were assured, the strategy was faulty; but, taken all in all, there is no doubt, as the course of events fully proved, that had the Turks simultaneously drawn their net round the Russians, and that had the commanders-in-chief, Osman, Suleiman, and Mehemed Ali acted in full co-operation at a given moment with each other, the plan, as it stood, would have had every chance of success. Whether the means at the disposal of the Turks warranted the plan, is a question which cannot yet be decided, and thus it is not possible to say who was responsible for its ultimate failure.

Hence, General Gourko having been ordered to advance upon Yeni Zagra, he at once took the necessary dispositions.

The right column, consisting of the Bulgarian legion, two batteries of artillery, and three regiments of cavalry, was to march from Eski Zagra; the central column, under Gourko himself, consisting of the rifle brigade, a regiment of Cossacks, and four batteries of artillery, from Kezanlik; and the left column, of five battalions of infantry, two batteries, and some Cossacks, from Hainkoi, the objective of all three columns being Yeni Zagra.



As will be seen on a reference to the following sketch, K 1, two of these columns, the one at Eski Zagra, and the other at Hainkoi, had to pass the river Tundja, and effect their passage through the defiles of the Kara Dagh. These mountains, though much lower than the Balkans, still present considerable difficulties. They are, in fact, the out-spurs of the Balkans, and at one time, no doubt, formed part of the mother-range until separated from it by land-slips and the action of the Tundja. Between Slivno and Kezanlik there are three well-defined passes and a defile practicable for mules and horses.

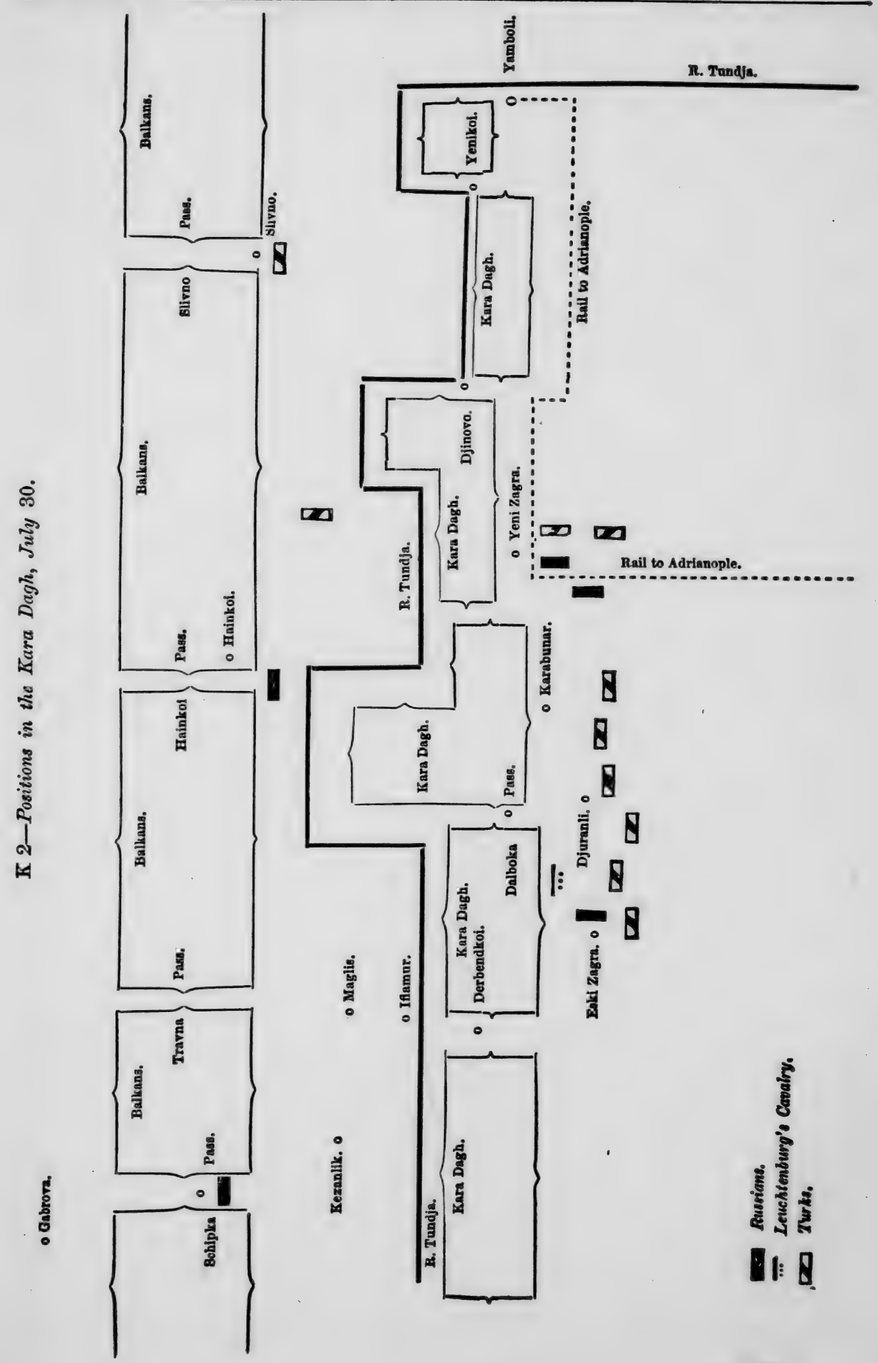
The first of these passages, from Kezanlik eastwards, is the Derbendkoi Pass; the second, the Dalboka Pass; the fourth, the Djinovo Pass, through which the high road runs from Yeni Zagra to Slivno. The third is the defile above mentioned, and lies nearly due south of the Hainkoi Pass. South of the Kara Dagh lie the great Roumelian plains, through which runs the railway from Adrianople nearly due north as far as Yeni Zagra, whence it turns eastwards skirting the mountains to Yamboli, whence a high road also runs to Slivno, and another to Karnabad, and so on to Schumla, Varna, and the rest of the Quadrilateral.

It will be seen, therefore, that the triangle, Yamboli-Slivno-Eski Zagra, was of high strategic importance. Whoever held it, commanded at the same time the roads from Adrianople to the Quadrilateral, and consequently both the Russians and the Turks devoted all their energies to its possession. To defend it, Suleiman Pasha called up his troops, and taking Slivno and Adrianople as his bases of operations, disposed them so as to converge upon the four passages of the Kara Dagh above mentioned. He had a column at Slivno, another between Slivno and the Hainkoi Pass, with orders to move forward and draw as close to the Russians, and menace their left flank as much as possible. His centre was disposed south of Djuranli, with detachments guarding his right at Yeni Zagra, whilst his left was working up towards the Russian right at Eski Zagra.

This disposition was a very happy one. It enabled him to offer a concentrated front to the Russians; whilst threatening both their flanks whatever route they might advance by. If they had all passed through the Derbendkoi and Dalboka passes, his centre could make front against the Russian centre, whilst his left could always overlap the Russian right; and his right, assisted by the reserves at Slivno, overlap the Russian left. If, on the other hand, the Russians had crossed the Kara Dagh west of Kezanlik to march upon Adrianople, he could have wheeled his left and centre back, pivoting on Yeni Zagra, and have covered the line to Adrianople whilst offering a full front to the Russians either to their full front or concentrate his attack upon their left flank. At the same time the Slivno forces protected his rear and right flank.

These advantages were apparent to General Gourko. He saw how easily he could be overlapped on either flank, and must have arrived at the conclusion that his only chance of success lay in his being able so to extend his lines as to outflank

K 1—*Positions in the Kara Dagh, July 29.*



even Suleiman Pasha's extended flanks—an operation which could not be successfully performed without a superiority of forces. Thus, ordering his column at Hainkoi to make across the mountains and attack the right flank of the Turks at Yeni Zagra, he also commanded the column at Eski Zagra to demonstrate against the centre and protect his right flank. He himself determined to force the Turkish left by way of the Dalboka Pass. This arrangement of General Gourko's repeats, on a smaller scale, the errors committed before Plevna. That Suleiman Pasha was commanding a large force somewhere south of Eski Zagra, Djuranli, and Yeni Zagra, could not, or ought not to have been unknown to him. Yet he took no measures to prepare the ground. Like Krüdener, he either did not care what Suleiman was doing, or he simply omitted to ascertain, by his cavalry, how near the Turks were to the right flank of his advance. Before advancing on Yeni Zagra, he should have pushed forward *reconnaissances* on his right till they had felt the enemy, and discovered whether he was present in force within striking distance. But this he neglected to do. His idea was to seize Yeni Zagra, occupy the passes through the Kara Dagh, strengthen his position at Eski Zagra, and thus hold the Kara Dagh from Eski Zagra to Yeni Zagra, as the Balkans were already held from the Schipka to Hainkoi.

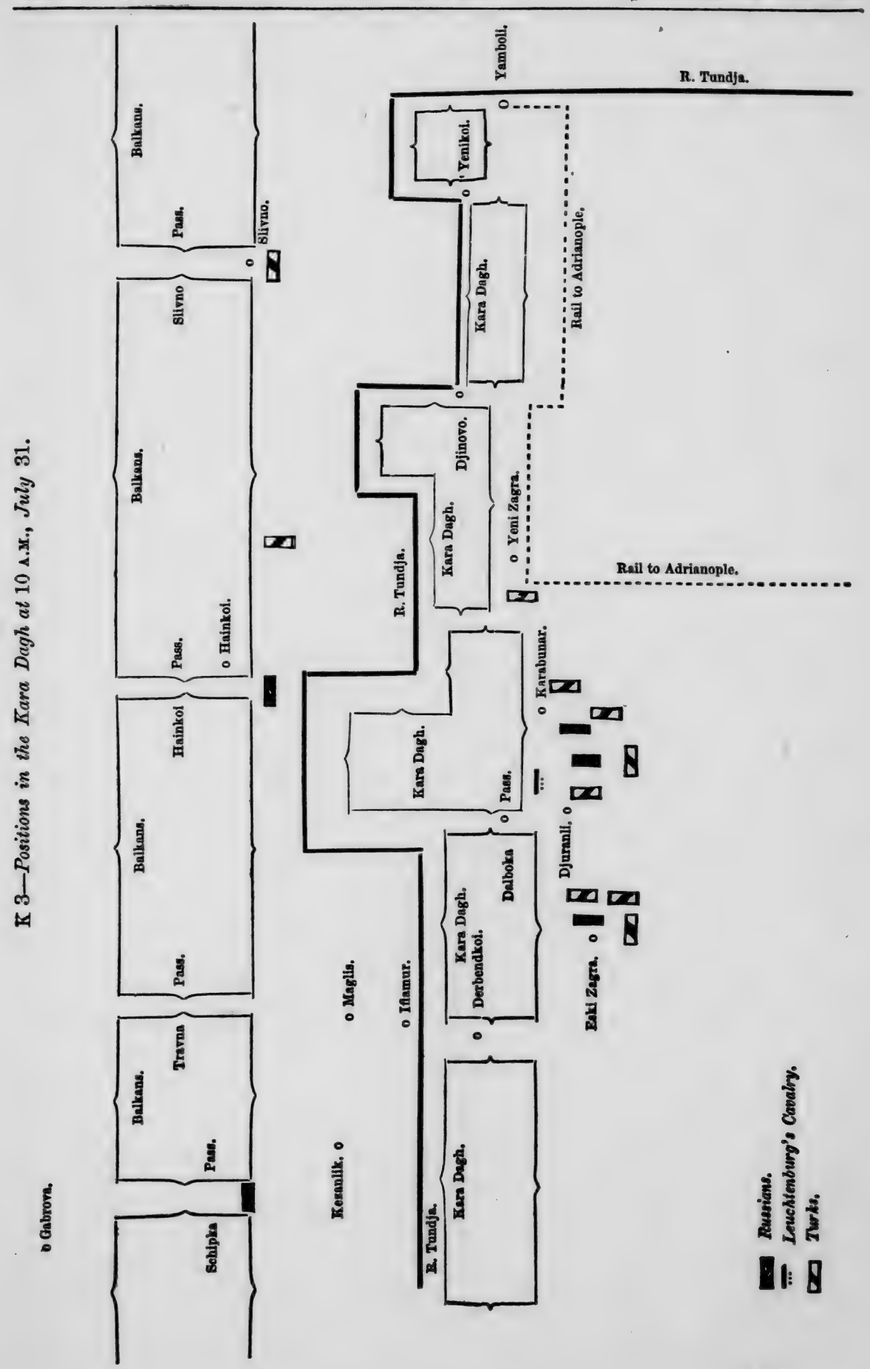
This idea only required sufficient forces to carry it out, in order to make it a very good one indeed. Without them, it was a very bad one. Still, though he must have had some misgivings, he set about it, and started for Yeni Zagra from Kezanlik on the 29th July, with a terrible march of forty miles before him. Nevertheless his troops came into action next morning on the left flank of the Turkish intrenchments in front of the railway station at Yeni Zagra to support the attack of the left column on their right flank. The Turks fought desperately, and the bayonet-fighting was long and strenuous, but after mid-day the Russians forced the position, drove out the Turks, took Yeni Zagra, captured three guns, blew up the railway station, and destroyed an immense mass of Turkish ammunition and stores. For want of cavalry, no pursuit was then possible; but next day the Cossacks fell on the retreating Turks and pursued them some little distance beyond the railway, till they discovered that the fugitives had found a support and were preparing to stand their ground again.

The first part of the programme had thus been successfully accomplished, but at a considerable loss, and Yeni Zagra was in the hands of the Russians. But in the meantime Suleiman Pasha had gradually been drawing his forces around. The columns advancing northwards were directed in two supporting corps, one against the Russians and Bulgarian legion at Eski Zagra, and the other to intercept General Gourko's route to that place, or to take him in the rear, whilst the forces between Yeni Zagra and Yamboli, re-forming under Reouf Pasha, assailed him anew in front.

In either case, as will be seen from the following sketch, K 2, Gourko's position was highly critical. He was nearly fifty miles away from his first base at the Schipka Pass, and had twenty-five to thirty miles of difficult country to traverse before reaching his second base, Hainkoi, the scene of his first successful exploit. As may be supposed, by this time General Gourko began to feel uneasy; and when, in the afternoon of July 30th, there came tidings, by a circuitous route through the Dalboka Pass and the defile west of Yeni Zagra, that the right column was seriously compromised in an attempt to force its way from Eski Zagra, he determined to march westward to its succour. That night (the 30th) he reached Karabunar, where he arrived in darkness, and found the whole valley was illuminated by blazing villages, showing that the Turks must have acquired the upper hand and were present in considerable force. But still he omitted to ascertain properly what forces were confronting him; and does not seem to have had an idea that Suleiman Pasha himself was present with his veteran troops from Montenegro, and that as the Bulgarians had treated the Mussulman country between Eski Zagra and Djuranli, the Christian villages and inhabitants were then being treated by the Turks. Five villages round Eski Zagra had been burned by the Bulgarians, and their inhabitants slaughtered to a man—women and children also suffering; altogether 340 souls in one afternoon—and the Turks, excited to the utmost pitch of fury at the ill-treatment their comrades and co-religionists had met with, took a dire revenge, and, as General Gourko was able to see, the whole plain was glowing with blazing villages and hamlets.

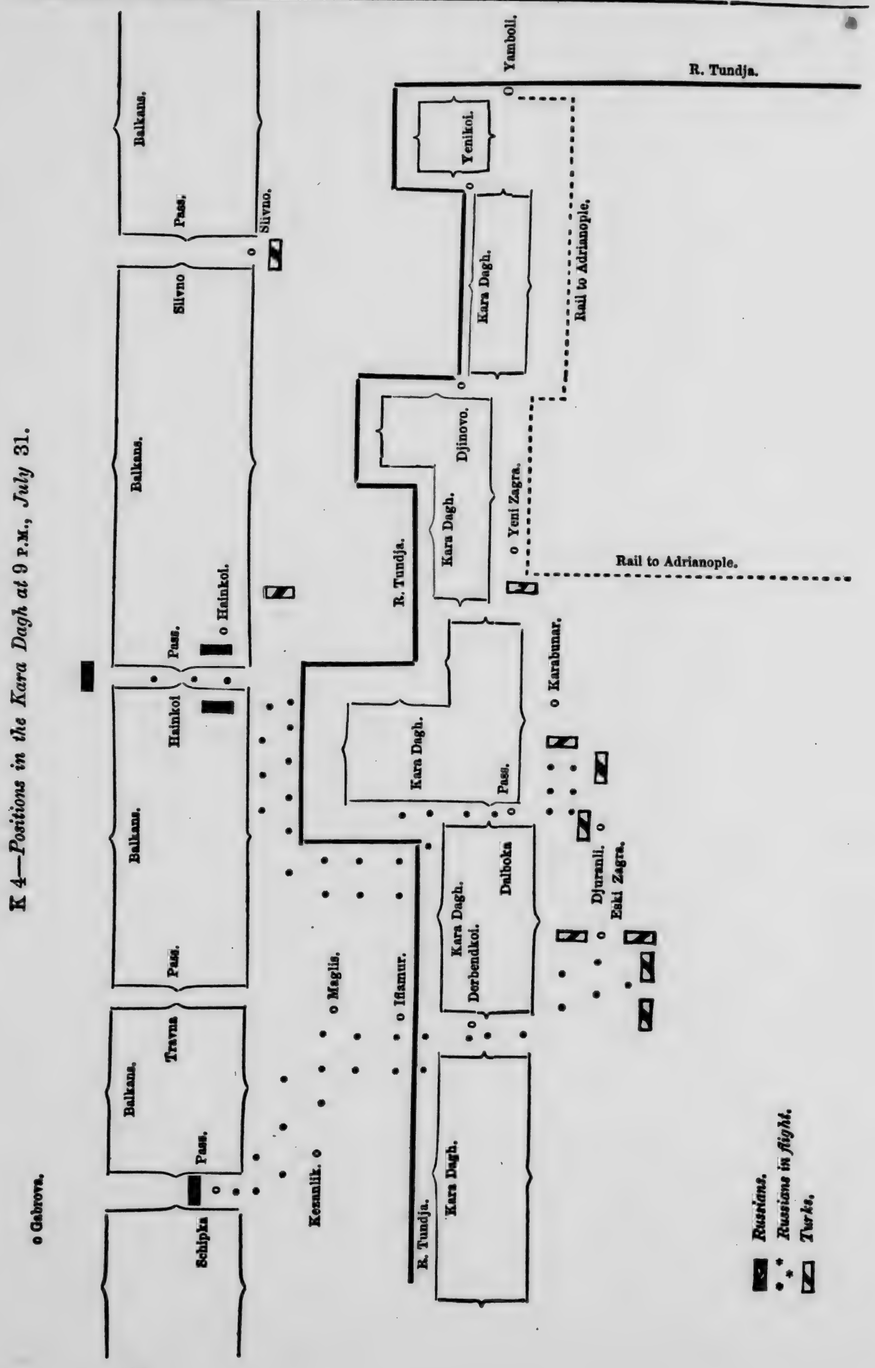
Under these circumstances General Gourko

K 2—*Positions in the Kara Dagh, July 30.*



would have done wisely to effect his retreat at once; but next morning (July 31st) he marched onward upon Djuranli, on the road to Eski Zagra, ignorant of the fact that some 30,000 Turks confronted him, and stopped the road into the latter place. The Turkish batteries swept the road with persistent fire; nevertheless General Gourko came into action, sending forward five battalions of infantry covered by artillery. He had forty-eight horses killed in one battery, and eight in another. Later the Turkish masses strove to turn the Russian left. The operation was resisted by the Tirailleur brigade, supported by two regiments of the 9th division, and for the moment the attack was repelled, but with heavy losses. Still later a column of Circassian cavalry strove to turn the Russian right on the mountain slopes, and the attack was succeeding, when there appeared on the scene Leuchtenberg's cavalry, which had cut its way from Eski Zagra, and which repelled the movement of the Circassians and saved the right wing, and, as it turned out, secured the Russian retreat through the Dalboka Pass, as will be seen from sketch K 3.

Here (sketch K 3) we find the Bulgarians at Eski Zagra being driven back towards the Kara Dagh by the Turkish forces, which were pressing them from the east and south, whilst Gourko was surrounded except on the side of the Dalboka Pass. Had the attack of the Turkish column in front of Djuranli upon the Russian right been successful, the whole of Gourko's army would have been put to the sword. From this fate it was saved by Prince Leuchtenberg's cavalry, which had left the Bulgarian legion to its fate. Even at this stage Gourko would have done well to follow his example, and leave his interesting friends to shift for themselves; but he still pressed on, hoping to outflank the Turkish left.



This view was all he was to have of Eski Zagra; for he had scarcely taken his bearings when there came to him an orderly who had evaded the Turks, and brought him intelligence that the Bulgarian legion was beset in Eski Zagra by a force of Turks estimated at 20,000 men. Gourko, small as was his force, for a moment resolved on an attempt to succour them, and in the meantime determined to maintain his position; but his resolution quailed before the appearance of two massive columns of Turks marching on his flank and rear. He had to leave the Bulgarians to shift for themselves, and make good his own retreat through the difficult and narrow Dalboka Pass, and thence through the Hainkoi Pass, accomplishing his retreat to that place on Thursday, 2nd of August, amid cruel hardships. In the retreat the wounded died like flies from jolting and exposure. Hale men succumbed from fatigue and sunstroke. As for the Bulgarian legion composing Gourko's right column, they, after advancing from Eski Zagra ten kilometres towards Karabunar, found the enemy and were driven in, and had to retire into the defile north of Eski Zagra, and thence effect their retreat through the Schipka Pass. Of the severity of the fighting a judgment may be formed from the fact, that of the Bulgarian legion, which began sixteen hundred strong, only between four and five hundred ever reached the Schipka.

The completeness of the *déroute* will appear from a glance at sketch K 4. The stream of panting, panic-stricken fugitives, hurrying on through the Derbendkoi Pass, the other through the Dalboka Pass, were all that remained of the army of the Balkans. By August 2nd, the Russian cavalry were all on this side of the Balkans. The Schipka Pass, however, was strongly fortified and armed with twenty-eight guns, and garrisoned by a regiment of the 9th division. Two regiments held the Hainkoi Pass, which presented a series of formidable defences. There were but few troops at Drenova and Gabrova; and only one brigade of the 14th division at Tirnova. Reinforcements were at once moved south to strengthen the detachments holding the passes, and fresh cavalry sent against Osman Bazar. In the fighting on the 30th and 31st of July, Gourko lost 3,000 men, excluding the Bulgarian loss—over 4,000 men in two days; and altogether, in the four days, over 7,000 men.

Such was the pitiful ending to the expedition across the Balkans, so dashingly begun. It is impossible not to sympathise with the unfortunate men, and the no less unfortunate general who led them to destruction; but, on the other hand, no words are too strong to stigmatise the conduct of the staff and commanders-in-chief, whose pride, carelessness, and ignorance caused such a sacrifice of life. The easily-earned glories of July 19th were utterly wiped out, blotted out, by the disasters of July 31st, before Plevna and in the Balkans. It was, indeed, a strange fatality that success and disaster on both sides of the Balkans should

K 3—*Positions in the Kara Dagh at* 10 A.M., *July* 31.

K 4—Positions in the Kara Dagh at 9 P.M., July 31.

signalise these days; and the Turks may well be excused for seeing therein a direct interposition of Allah in their favour.

The Russians, for the moment, were utterly crushed in their advance and on their right. True, it has been said that, two days after the defeated attack, the Russians had so recovered their organisation as to be able to renew it. It was for them of paramount importance to do so, had it been possible. But it was not; and they stood waiting for the necessary reinforcements, thankful to fortune that they were not assailed in their defensive positions. The Plevna and Balkan reverses altered the whole plan of the campaign.

No more reckless, if victorious, raids were dreamt of, and no more advances, regardless of threatening concentrations on the flanks. The Russians virtually abandoned the expectation of pressing the war successfully across the Balkans for the year. They would have been satisfied to know that, during the three months still available for fighting, they could sweep Bulgaria north of the Balkans clear of the Turkish armies. The Crescent, they felt sure, would wave over the towers of Adrianople and the waters of the Golden Horn for yet another winter. They might, indeed, continue to hold the Balkan passes which they had won. A man does not throw away the keys which open the door of the treasure-chamber. But the orders were to withdraw from all the trans-Balkan positions occupied, where they had not already been forced to retire, and to draw in around the Schipka Pass—this from no direct pressure of the Turkish forces beyond the Balkans, but because of the intrinsic risk always attending unsupported advances when they cease to have a definite object.

Now to speak of this side the Balkans. The paralysis brought about by the Plevna reverse, forced the Russian attitude for the time to be perfectly passive till the reinforcements arrived. Seven fresh divisions, not formed into army corps, were on the march, some still in Russia, others pressing on through Roumania. One hundred thousand men more were wanted, and were forthcoming, but they had to be waited for. The first brigade of reinforcements was expected to cross the Danube in a few days; but the offensive could not be recommenced before all the reinforcements were to hand.

Meantime the Grand Duke Nicholas was in Bulgareni, in rear of the intrenched positions of Schahofskoi and Krüdener, confronting Plevna. Part of Mirski's division stood between Tirnova and Lovatz, to hinder a Turkish advance in the direction of the former important centre. Thus shiftily were stopped the gaps through which was threatened the right flank of the Russian communications; and though the defensive protection was perhaps sufficient, the means were utterly inadequate for a renewed offensive, for sixty to seventy thousand Turks stood on the Lovatz-Plevna line, and were prepared to take a deal of beating.

On the left flank equally a strictly defensive attitude was enforced by circumstances. There were available for holding the line from the Danube to the Balkans on this flank, the two corps constituting the army of the Czarevitch, and the 1st division of the 11th corps, left behind by Schahofskoi when he marched on Plevna; in all about 60,000 men, necessarily attenuated over a long front, so as to leave no gap for the Turks to creep through.

The Turks were of about the same strength, but they had the advantage of choosing where to strike if they cared to strike at all. Mehemed Ali Pasha could concentrate at Rustzuk or Rasgrad, or Osman Bazar. The Russians had to be ready to face him everywhere. They dared not take the offensive and leave tracts of unguarded flank, and were not strong enough to guard a continuous flank and take the offensive as well. They were obliged to remain on the strict defensive. The investment of Rustzuk had to wait. The troops designed for that duty were needed elsewhere. The siege cannon were not ready even if the troops had been available. The river Lom still virtually constituted the line of the Rustzuk army, but the head-quarters of the 12th corps had been moved beyond it, from Trestenik to Kadikoi. The head-quarters of the Czarevitch, with the 13th corps about them, advanced from Obertenik to Kaceljevo, thus confronting Rasgrad, while between Osman Bazar and Tirnova the 11th division stood with its head-quarters in Kosarevatz.

Zimmermann was no further than Trajan's Wall. It was a stalemate with him. He was guarding the Dobrudja against an enemy who did not threaten it. He could not push forward with his 30,000 men lest enemies from Varna and Schumla should converge upon him.

At the same time the Russian army began to suffer in health, owing in some corps to irregular rations, in others to hard marching, in all to heat; but the greatest predisposing cause was the total neglect of all sanitary precautions. They never buried dead horses or oxen, or the entrails of slaughtered cattle. They never dreamt of the wisdom of the latrine system. The result was a general tainting of the air, which poisoned men predisposed to fall ill by reason of lassitude from over-fatigue or long abstinence from food, although men in stalwart health escaped. Strangely enough, the greatest proportion of illness manifested itself in the *personnel* of the imperial suite, whose members were comparatively nursed in the downy lap of ease, and fared sumptuously every day. General Ignatieff, for three days, was dangerously ill from a species of gastric fever, and Prince Galatzin was also suffering from the same disorder. The emperor had five high officers, known as general-adjutants, on personal service about him. Of these, but one was fit for duty; the other four were ill. Nearly everybody was more or less sick, squeamish, and out of sorts. The reason was not far to seek. The air was tainted thick and heavy with filth and rotting offal. Even tobacco-smoke and brandy were powerless to avert nausea.

But at this point, where the errors of the Russians culminated in disaster, the Turkish errors began in a glaring, almost irretrievable manner. They wilfully threw away their opportunities. A vigorous attack, simultaneously carried out by Osman Pasha and Suleiman Pasha, would infallibly have driven the Russians upon Sistova and Biela at least; and then, with the co-operation of Mehemed Ali, the chances were that the Russians would have had to retire across the Danube, or have intrenched themselves round the bridge-head at Sistova. But from whatever cause—jealousy of each other, incapacity, want of material—the Turkish commanders neglected to follow up their successes, and they themselves entered the fool's paradise which they had driven the Russians out of. Here we will now leave them, and turn to the operations in Asia Minor.

CHAPTER XXI.

THE CAMPAIGN IN ASIA.

By the 24th of April, the Russian armies in the Caucasus had taken up their positions on the confines of the frontier. The commander-in-chief was the Grand Duke Michael. He established his head-quarters with the centre and main army, which was commanded by General Loris Melikoff, and stationed at Alexandropol, on the main road from that place to Kars. The right wing, called subsequently the Rion corps, was under the orders of General Oklobschio, and was stationed at Ozurgeti. The left wing, under the command of General Tergukassoff, was at Erivan.

The Turks were in force at Batoum, at Kars, and Erzeroum, with reinforced garrisons at Ardahan and Bayazet. These places formed the goals which the Russian armies were to reach and seize with all possible expedition.

The object of this disposition of the Russian armies was to enable all three to converge upon Erzeroum if possible—that is to say, in case Batoum should speedily fall, as was expected.

The right, or Rion corps, in this case would then march south-west through the valley of the Tcharuk by way of Tortoum, and fall upon Erzeroum in the north.

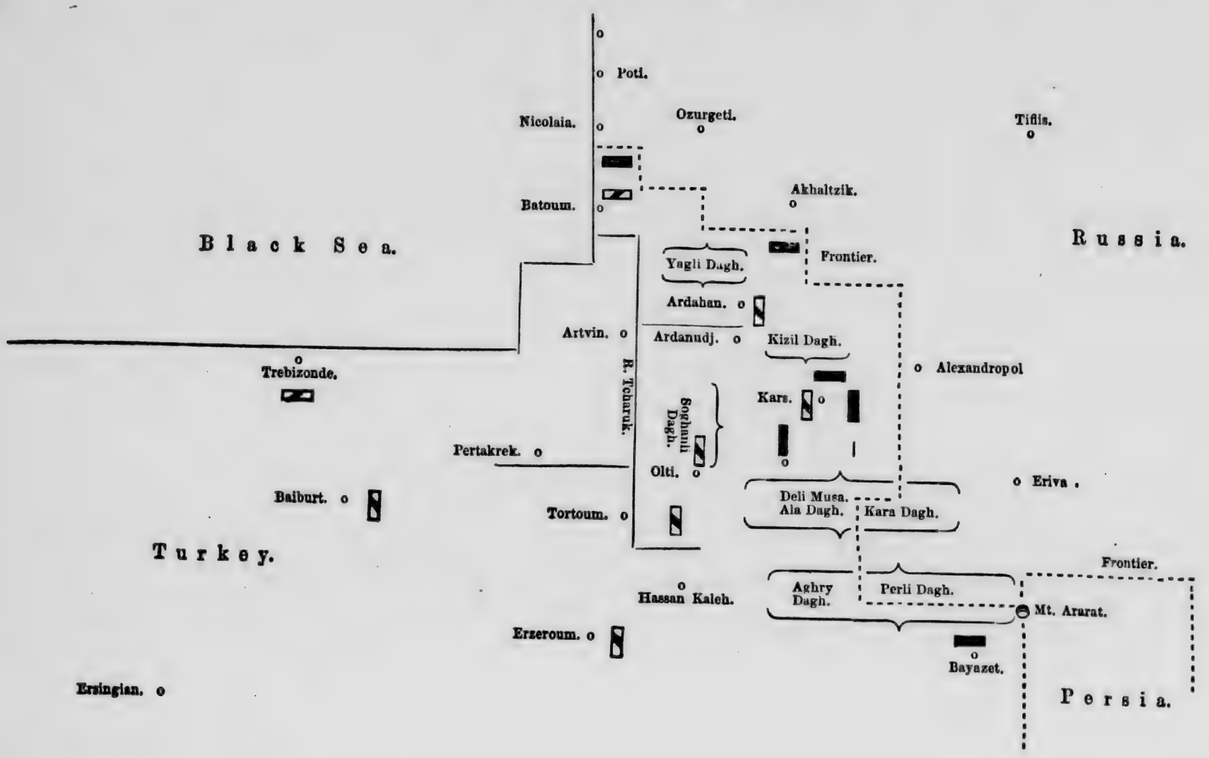
The centre, or Alexandropol army, after seizing or masking Kars, would form front against the Turkish field army between Kars and Erzeroum, supposed to be about Olti and Deli Mussa, and drive it back, falling upon Erzeroum in the east.

The left, or Erivan corps, would seize upon Bayazet, and, advancing along the valley of the Euphrates, would join with the centre, or arrive before Erzeroum in the south. If it should not be possible to obtain speedy possession of Batoum, then the task of reducing Kars and Erzeroum would fall upon the two other corps, which would then become the army of the advance, and would also operate in three columns; the right against Ardahan, striking the valley of the Tcharuk by way of Ardanudj, whilst the centre and left followed the original plan.—A general bird's-eye view of the scene of operations is afforded in sketch L. The main fault of this plan was, that each of the three corps was isolated from the others by the difficult country, without proper roads or accommodation lying between them. Between the Rion corps and the centre corps lay the terribly mountainous country formed by the Kizil Dagh, the Yagli Dagh, and the Adtschara mountains.* The Erivan corps, on the left, was also separated from the main corps marching on Kars by two almost impassable mountain ranges, the Ala and Kara Dagh in the north, and the Aghry and Perli Dagh, terminating in Mount Ararat in the south, the intervening valley being traversed by the Araxes. Thus the valley of the Euphrates, in which the Erivan corps was to operate, had no means of communicating with the centre except through the difficult pass of Kagisman, across two ranges of mountains and a deep roadless valley—a distance, be it noted, of fifty miles between the two most accessible points in the valley of the Euphrates and the valley of the Kars Tchai. As long as each corps was strong enough to stand on its own feet, and required no assistance from the others, there was, of course, no great danger; but the moment that one or the other was out-matched, destruction or a speedy retreat was inevitable.

However, the Russians were as confident of success in Armenia as they were in Bulgaria; and on April 25th the Rion corps marched on the points agreed upon.

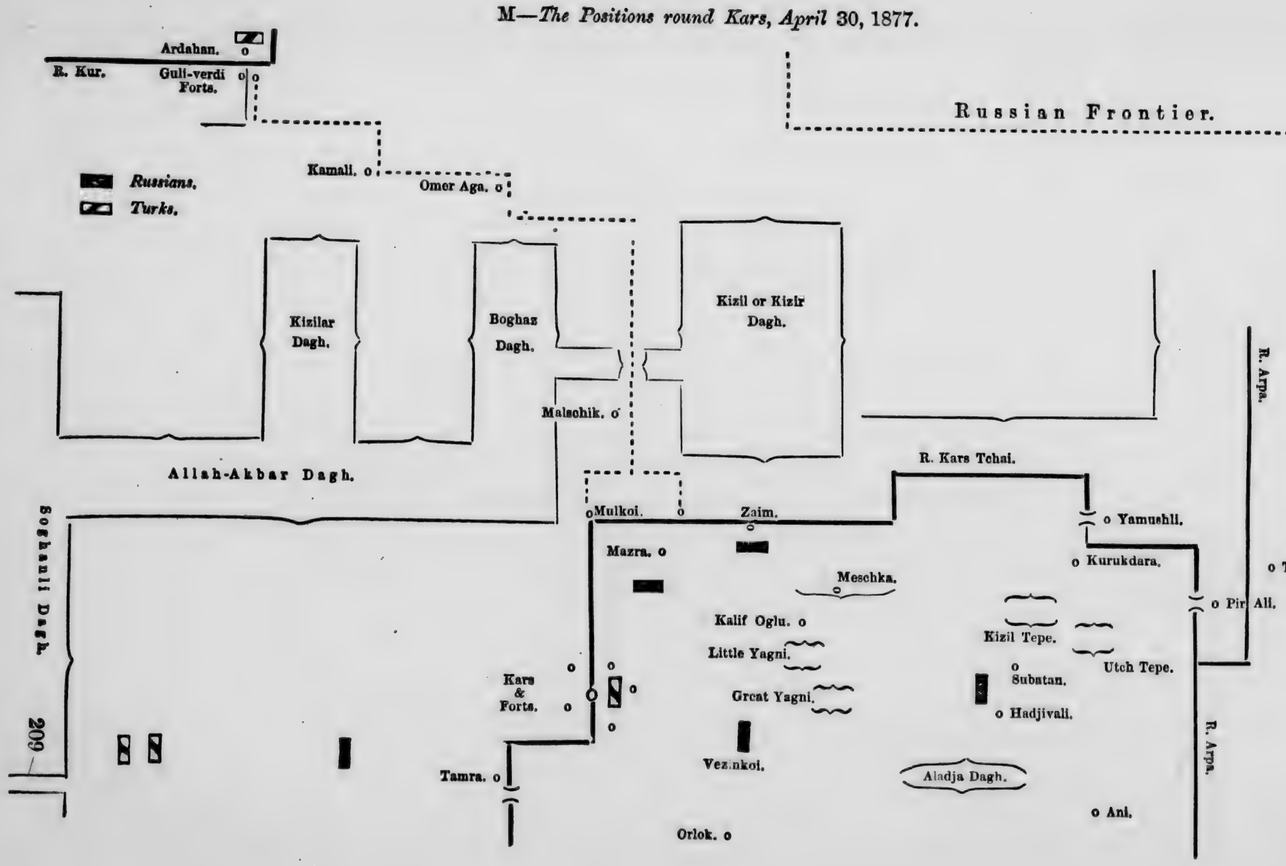
The Rion corps, under the command of General Oklobschio, after leaving Ozurgeti, was divided into two columns. The right column, under General Scheremtieff, advanced along the Atchmarum road, and felt the enemy on the Kinhisch river, whilst the left column, commanded by General Denibekoff, performed a flank movement, and struck the Turkish camp at Muchaster on the Khatzubani heights. A serious engagement ensued, resulting in the flight of the Turks and the capture of their camp by General Denibekoff, who at once fortified the heights and intrenched himself in a strong position. The right column also succeeded in establishing a footing near Anchaury, on the river Choruk, a small but deep stream north of Batoum.

Meanwhile the centre, under Loris Melikoff, also advanced in two columns, whilst a flanking column started from Akhaltzik. The two main columns followed the high road from Alexandropol to Kars together as far as the village of Toknis. Here the road splits, the main road crossing the Kars Tchai at Yamusehli, and the other, a branch road, further south at Pir Ali. At Tiknis, the main column followed the high road by way of Yamnohli, and proceeded to Kurukdara, the second column taking the branch road and passing the night of the 28th April at Hadjivali.



On the 29th and 30th both columns moved forward; the main corps held the northern road, running through Meschka and Kalif Oglu, north of the Yagni Hills, whilst the other column, consisting largely of cavalry, supported by twelve battalions of grenadiers and forty guns, proceeded from Hadjivali to Vezinkoi, as shown in sketch M.

Here the Turks made a sortie under cover of their guns in the fortress, to intercept the cavalry, which was making for the bridge over the Kars Tchai at Tasura. This sortie, however, was a very lame affair, and was easily repulsed by the grenadiers and artillery; whilst the cavalry, scouring the country west of Kars, after successfully crossing the river, actually came in contact with Mukhtar Pasha himself, who was leaving Kars with eight battalions, on his way to Erzeroum. He had left a sufficient garrison—or at least as many men as he could spare—in Kars, and was then proceeding to Erzeroum to complete the organisation of his field army. After these incidents, the Russian infantry and Loris Melikoff returned to Zaim and Mazra, leaving the cavalry at Vezinkoi to watch the army in the south, whilst a reserve force remained in Hadjivali.



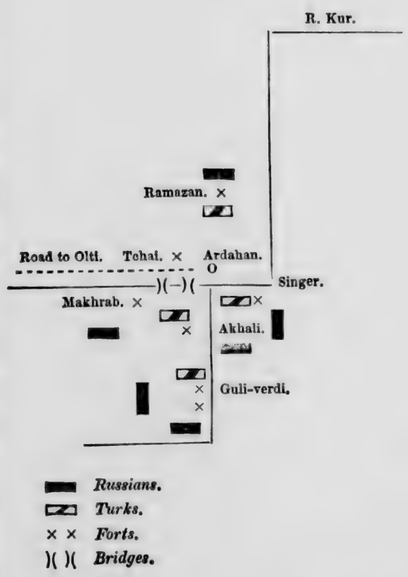
On the extreme left of the Russian line, General Tergukassoff reached Bayazet on the 30th of April. At his approach, the Turkish garrison, some 1,800 men strong, wisely determined not to attempt to defend the tumble-down citadal and crumbling fortifications of the place, in the teeth of an army superior in numbers, and fell back upon Diadin and Hassan Kaleh, picking up the garrisons in these places as they went along. The same day, General Tergukassoff,

* See vol. ii.

L—*The Position in Armenia, April* 30, 1877.

M—*The Positions round Kars, April* 30, 1877.

leaving a garrison in the place, and sending out a few detachments towards Van, continued his onward march along the Euphrates valley.



The plan conceived by the Russians had thus been fully executed in its initial phases; and General Loris Melikoff at once bagan to erect siege batteries against Kars. Under cover of these operations, General Melikoff undertook an expedition against Ardahan.

A reference to sketch M, will show that the valley of the Kur is separated from that of the Kars Tchai by the Allah Akbar range of mountains, which is a continuation of the Soghanli Dagh. From the Allah Dagh two spurs branch out, one the Kizilah Dagh, and the other the Boghaz Dagh. The former attains a height of over 10,000 feet; and the latter is close upon 9,000. From the Boghaz Dagh a high ridge stretches across to the Kizil Dagh, 10,500 feet high; and it was across this connecting ridge that the road ran from Kars to Ardahan by way of Mulkoi, Matschik, Omer Aga, and Kamali. It was along this road, which he commanded as soon as he had taken up his position at Mazra and Zaim, that Melikoff advanced, and thus cut off all communication between Kars and Ardahan, except by a circuitous route over the Soghanli Dagh.

In addition to this expedition under Melikoff, Ardahan was attacked from the opposite side by a detachment marching from Akhaltzik on the frontier, which reached Ardahan at the same time as the column from Kars. They were before Ardahan on May 13th, and General Loris Melikoff immediately began making *reconnaissances* and combining a plan of attack. The column from Kars consisted of two regiments of grenadiers, three batteries of artillery, two regiments of cavalry, and a company of sappers; in all about 7,500 men, under the command of General Dewel. The column from Akhaltzik was composed of two regiments of infantry, two batteries of artillery, one battalion of sappers, half a battery of horse artillery, and three regiments of cavalry; in all about 8,500 men, under the command of General Heimann. The commander-in-chief of the two columns was General Loris Melikoff, under whose direction the attack was made.

Ardahan is situated on the river Kur, the same which runs through Tiflis and flows into the Caspian. The fortress was comparatively new, and did not exist in 1854. It was strongly fortified, defended by eleven forts constructed on modern plans, and one on designs drawn up by an English engineer. On the south (as shown in the following sketch N), defending the road from Kars, distant two and a-half miles from the town, was the fort of Guli-verdi, built upon a mountain and armed with nine guns, and near to it was another fort armed with three or four guns, on a hill dominated by Guli-verdi, from which it was separated by a valley only two or three hundred yards

N—*Positions Round Ardahan and Forts, May* 17, 1877.

wide. Near the town, on the same side of the river, were three more forts—on the west Makhrab-tabia, in the centre Akhali-tabia, and on the east Singer-tabia. This latter was the one which was supposed to have been designed by an English engineer, and was of somewhat curious construction. There were three lines of defence; the escarpments were faced with stone; and they were built in a triangular shape, with the points towards the attack, and each line of defence rising terrace-like higher than the one before it. On the north side of the

river there was another fort called Tchai-tabia, which was connected with the southern side by two bridges; and on the north of the town, about two miles distant, was another strong fortress, called Ramazan-tabia, built like that of Guli-verdi, on a steep mountain which overlooks the town. The garrison destined to defend all these forts consisted of about 6,000 men, and all the forts together were armed with 92 guns. The greater part of these guns, however, were of small calibre, besides being old, and quite unable to compete with modern artillery. There were only two 24-pounders in all, the rest being principally 12-pounders; and there was very little ammunition even for these guns, such as they were.

General Melikoff, after reconnoitring the place, decided to make his real attack on the south against Guli-verdi, while the Akhaltzik columns made a feigned attack against the fortress of Ramazan-tabia on the north. In the first place, the fortress of Guli-verdi seemed more accessible, and he besides discovered that Ramazan-tabia was not armed against the town, and that the guns of this fortress could not be directed against an attack from the south. On the night of May 16th he succeeded in planting four batteries, consisting altogether of sixteen guns, against Guli-verdi on three different points, and on the morning of the 17th the batteries opened on the fort, and poured a well-directed and destructive fire into the Turkish batteries. The Turks scarcely replied, partly because the Russian fire dismounted their batteries, and partly because they had little or no ammunition. The consequence of this neglect was, that the whole Russian loss by the Turkish artillery was only six men wounded. About one o'clock the Russians began to perceive the Turks retreating in small parties from the fort to the town. "In the evening," says the *Daily News* correspondent, "General Dewel led three battalions to the assault of the heights of Guli-verdi, and carried them without losing a man and without firing a shot." This was but natural, inasmuch as the fort was already abandoned when the assault was made. The Russians found several of the guns dismounted, and the gunners lying dead beside them, and a considerable number of killed and wounded in the fort. As soon as Guli-verdi was taken, one of the Russian batteries which had been directed against that fortress was then turned towards the town, which was still defended by the forts already mentioned, of Makhrab-tabia, Akhali-tabia, and Singer-tabia.

While this attack was being directed against Guli-verdi, several other batteries had been planted and directed against the three forts defending the town. By half-past five in the evening of the same day, General Melikoff thought that the assault might be delivered, and General Heimann, who was operating on the left, against the Makhrab-tabia, sent at about the same moment to ask if he should not make an attempt upon the works on his side. The assault was ordered all along the line at the same moment, and, although the fort of Singer-tabia was considered the strongest, it was the one which fell first. The others soon followed, although the Turks, as usual, made a very desperate resistance on the walls; for though so badly off for heavy material, they had plenty of ammunition for their small arms. After a desperate fight, in which the principal losses of the Russians occurred, the Turks were finally driven across the river by the two bridges already spoken of, and took refuge in the fort of Tchai-tabia, everywhere hotly pursued by the Russians. When the latter, headed by General Heimann, were a few yards from the opposite bank, the bridge gave way before them; but nothing daunted, the Russians sprang into the water, which was not very deep, and continued to cross by wading. General Heimann himself was one of the first to leap into the water. The Russians had thus obtained possession of all the forts on the south side of the river; there remained only the fort of Tchai-tabia and the fortress of Ramazan-tabia on the mountain. The Russians immediately attacked Tchai-tabia, and the Turks were so discouraged by the Russian success and overwhelming numbers, that they scarcely made any resistance, and fled. In fact, they had already begun to fly before the Russian attack began; so that by dark the town of Ardahan was in complete possession of the Russians. While this was going on, General Dewel was occupying the attention of the garrison in the strong fortress of Ramazan-tabia on the north of the town. "He soon succeeded," says the official Russian report, "in silencing the batteries in this fortress, which only fired three or four shots in all; and towards evening, about the time of the assault on the town, he likewise ordered an assault. But what was the surprise of the Russians, upon

entering the fortress, to find that the Turks had all fled. They had evidently become panic-stricken when they perceived that the town was already in the hands of the Russians, and they had retreated to the west by the road towards Batoum and Olti."

A finer description than this, of the affair at Ardahan, has seldom been penned by victorious general or partisan correspondent. It can only be compared to the account given by the same paper of the siege of Urgel during the Carlist war, and the assault of the Torre Solsona. This unfortunate town had been bombarded by sixteen guns, from 8 A.M. till 12 P.M., without any effect upon the one company of men who held it, and who had not one single gun to reply with. At 2.30 P.M., the garrison, seeing that some 2,000 men were preparing to assault it, took their precautions, and, holding the place till 3 P.M., then quietly retired. The Alfonsists then, when there was not a man in the place, successfully "assaulted" it, and not unnaturally captured it. The same was the case at Ardahan. There were no guns of any size, and there was no heavy ammunition. The Russians bombarded fort by fort without drawing a reply, and then assaulted all round in such numbers, that the Turks, fighting as long as they could do any damage to their assailants, wisely withdrew to fight another day.

The Russian losses, in the whole affair, were 67 killed and 293 wounded, besides one officer killed and ten officers wounded; making altogether 370 killed and wounded. The loss of the Turks was 70 dead and 200 wounded. Among the wounded in the hospital was the constructor of the fort of Singer-tabia. He was found by Colonel Bulmering, the constructor of the Russian batteries, who was anxious to see him and talk with him, but the poor fellow died almost as soon as he was discovered. The Russians captured ninety-two guns, a number of tents and camp material, and a large supply of flour and provisions, but no ammunition; the Turks had little or none. There were very few prisoners taken; and those of the Redifs, or reserves, who had been forced to come in from the surrounding villages, were immediately released and allowed to return to their homes; the Nizams, or regular troops, only were held as prisoners of war. Among the prisoners taken was General Ali Pasha, commander of the Turkish left wing, and several Turkish civil officials, besides many officers who had been wounded or otherwise disabled. The inhabitants, who had fled during the attack, upon being assured by the Russians that no harm should come to them, began to return, and in a very few days the town had resumed very nearly its ordinary aspect. The Turks taken prisoners had a feeble, half-starved look, which showed how long they had been on short rations, and this in spite of the large supply of stores and provisions which had been found in the town.

With the capture of Ardahan, and the rapid advance on Kars and Bayazet, the same exultation was felt by the Russians as in Bulgaria, and there was naturally a corresponding depression in the Turkish ranks. But the disadvantages of a too rapid extension into the heart of a hostile country notorious for its want of communications, soon made themselves felt, especially as the Turkish commander adopted the same Fabian tactics as his colleagues in Bulgaria. The Russians were perpetually seeking their enemy, who was split up more or less, and confined himself to occupying strong positions, which the Russians were not strong enough to carry and at the same time keep a sufficient force before Kars.

Thus, after the capture of Ardahan, a period of inactivity set in—the Russians busied with the preparations for the siege of Kars and Batoum, and the Turks with the organisation of their field army. Isolated attacks and counter-attacks occurred in the passes and defiles between the advanced posts; foraging parties and *reconnaissances* starting from Kars on the one hand, and from the Soghanli Dagh on the other. Small detachments of troops and irregular cavalry somewhat harassed the Russians; the consequence being that both corps, Melikoff's and Tergukassoff's, fell somewhat to pieces, especially as they had to leave detachments here and there to occupy the places and strategic points which fell into their hands as they advanced. Added to all this, was the difficulty experienced by the commissariat and transport services; so that the grand duke was practically fettered, and did not know what to do. Not strong enough to advance, except by venturesome sporadic raids *à la* Gourko—whose place in Armenia was filled by Tergukassoff—and not strong enough to remain quiet and thoroughly invest Kars, with Mukhtar Pasha on the Soghanli threatening his flank and front, he was obliged to leave much to the fortune of war and conceal, by a

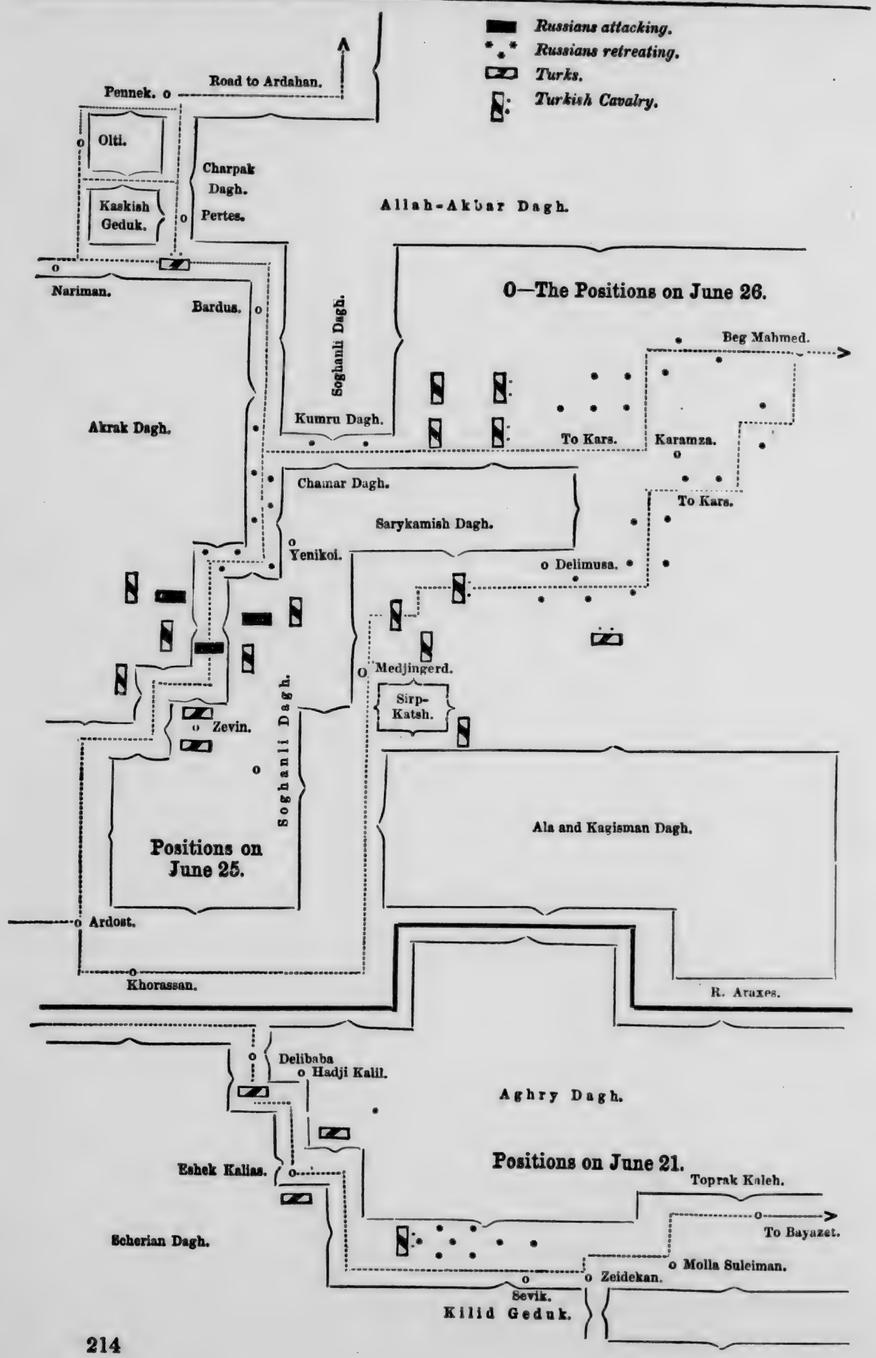
firework display of activity, the real weakness he was suffering from.

Thus, to keep up the fiction of a successful advance, he continued the investment of Kars, trusting to the flanking movement being carried out by Genaral Tergukassoff for something favourable "to turn up," whilst demonstrating against the Turkish positions in the Soghanli and the defile leading to Erzeroum.

Between Erzeroum and Kars and Ardahan there were two well-marked lines of defence. The first line, in the immediate vicinity of Erzeroum (of which a sketch will be given in the proper place), was formed by the Palantuken Dagh and the Karakaya Dagh in the south, and the Deve Boyun in the east: on the north the approach was pretty open through the valleys of the Tortoum and the Tcharuk rivers.

The second line of defence was formed by the mountains encircling the uplands, at the eastern apex of which lay Kars. The configuration of this district is admirably shown in the following sketch O.

On the north was the Allah Akbar range of hills, separated in the west by a wild, roadless defile from the Charpak Dagh. This, in turn, was divided from the Keshish Gedük in the west, again by a difficult valley, through which ran one of the roads from Ardahan. The other, the main road from Ardahan, passed the mouth of this valley on the north, and ran by way of Pennek, Olti, and Nariman, near which it was joined by the first road, to Erzeroum and Hassan Kaleh. It was also connected with the first road, or Pertes road, by a traverse-path running north of the Keshish Gedük.



A force, therefore, advancing from Ardahan had a choice of action. It could either attack the rear and flank of any enemy in position on the Soghanli Dagh, or it could advance upon Erzeroum, or demonstrate against both. The keys of the defenders would then naturally be at Pennek, Olti, Nariman, and Bardus.

South of the Allah Akbar Dagh ran the roads from Kars, which split into two branches at Beg Mahmed (see sketch O). The northernmost of these branches ran at some distance from the Allah Akbar Dagh, but close along the slope of a spur of the Soghanli Dagh, jutting out eastward parallel with the Allah Akbar Dagh, and called the Sarykamish Dagh, from the river flowing along its southern base, till it entered the pass on the Soghanli Dagh, between the two peaks of Kumri on the north and Chamar on the south, both of them over 9,000 feet high. Issuing from this pass it joined the road running south from Ardahan, between the eastern slopes of the Akrak Dagh and the Soghanli, to Erzeroum and Hassan Kaleh. Here the keys to the defenders' position from this point were clearly at the entrance or debouchment of the Chamar Pass, or at Zevin.

The southern branch of the road from Kars skirted the southern slopes of the Sarykamish Dagh, and turning southwards ran through Medjingerd between the Soghanli Dagh and the Sirpkatch, or Mount of the Holy Cross, a rugged peak 9,500 feet high, and surrounded by a series of difficult slopes. Thence it ran between and across the hills forming the first ascent of the Ala and Kagisman Dagh on the east, and the Soghanli in the west, till it reached the valley of the Araxes, the northern bank of which it followed to Khorassan and Ardost. On this road the key of the position was at Medjingerd, at the entrance of the defile between the Soghanli and Mount of the Holy Cross.

South of the Araxes were the imposing mass of the Aghry Dagh, rising in parts to 11,000 feet, and generally averaging 6,000 feet above the sea. This range of mountains was separated on the south from the Scherian Dagh and the Kilid Gedük, also rising to an average of 6,000 feet, by the river Scherian, along which ran the road from Bayazet to Erzeroum by way of Diadin, Toprak Kaleh, Zeidekan, and Delibaba, where the water-shed between the Scherian and the Araxes was crossed, Delibaba itself being already in the basin of the Araxes. From Delibaba the road followed the southern bank of the Araxes, which it crossed at Köprikoi, some fifteen miles west of Khorassan.

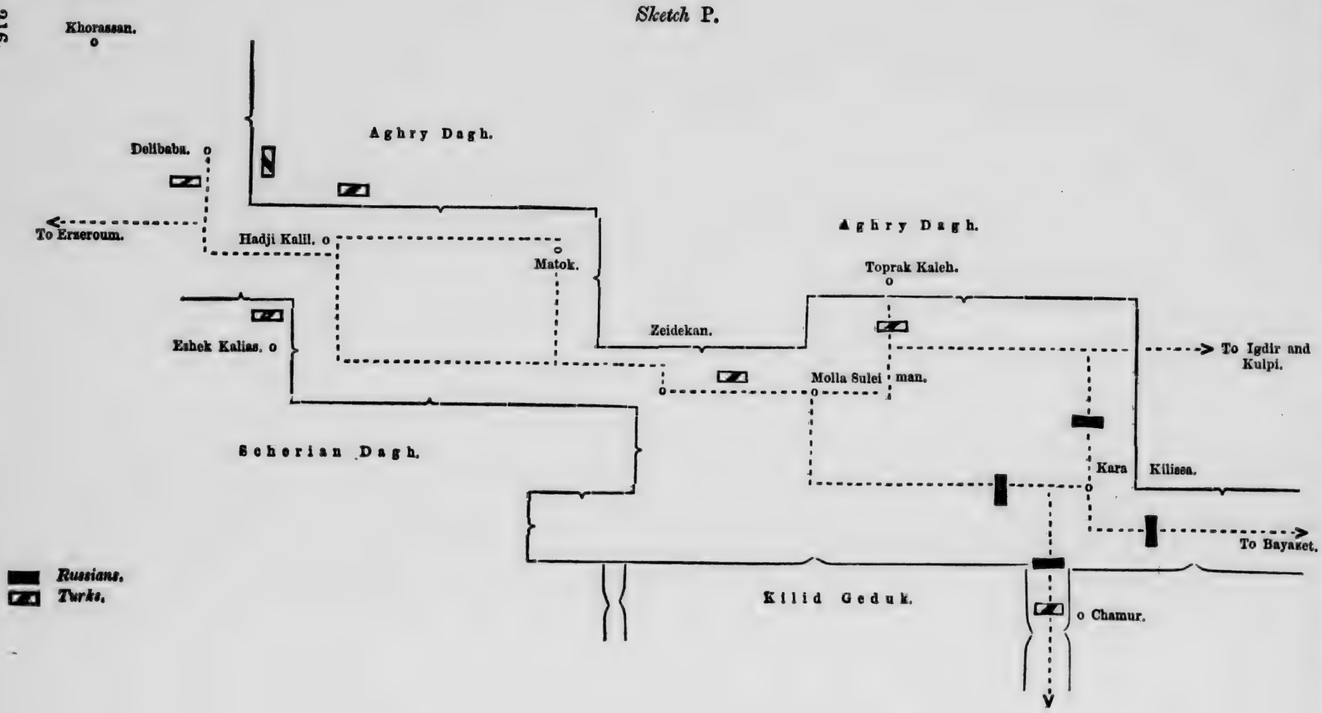
Along this road there was a large choice of defensive positions, which also allowed of flanking attacks against an advancing enemy. Such a position was offered by Toprak Kaleh, Molla Suleiman, and Zeidekan, east of which the Euphrates, running southwards, opened a lateral approach to the valley of the Scherian, which fell into the Euphrates a few miles south of Kara Kilissa, and through which a force advancing from Melashgerd, Mush, or Bitlis, could attack the right flank, or, if the

defenders' position were properly chosen, and well held, the rear of the advancing foe. Not only that, but the left flank would also be open to attack from any force advancing through the pass over the Kilid Gedük, west of Zeidekan (as shown in sketch O). A fine defensive position was also offered on the line Delibaba, Hadji Kalil, and Eshek Kalias, of which we give a sketch on an enlarged scale further on.

Such, therefore, were the roads open to the Russians to choose from, the immediate objectives being, in all cases, Ardost and Khorassan. These gained, there would only remain the line of the Palantuken Dagh and Deve Boyun between the Russian armies and Erzeroum, the capital of Armenia. The plan of campaign for both sides was thus clearly dictated by the exigencies of the country. It was the duty of Mukhtar Pasha to hold, with strong garrisons, the line Pennek and Olti as a first defence, and Nariman and Bardus as the second, against any force advancing from Ardahan. This would have formed the left of the position. His centre should have been protected by equally strong, or stronger garrisons, at the mouths of the Chamar Pass and at Medjingerd. His right should have been held in the same way at Zeidekan, forming the first line, and at Delibaba, forming the second line. His active army could then have taken up a central position between Yenikoi and Zevin, ready to march to the assistance of any of his garrisons which might require his help.

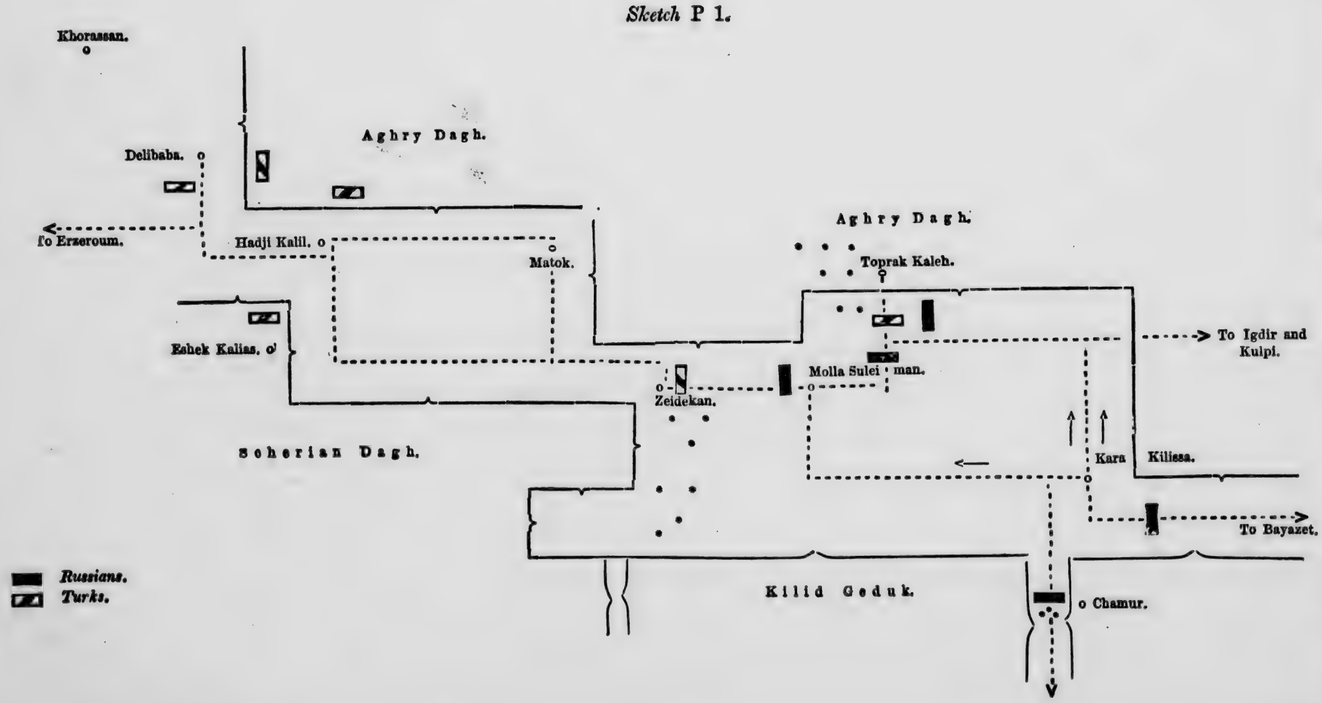
Similarly the Russians had to be prepared to make a series of simultaneous feints along all four roads, two of these feints, at least, being carried out with forces strong enough to turn the feigned into a real attack.

The only practicable way to have done this, supposing that Mukhtar Pasha kept to the plan dictated by the circumstances of the field, would have been for them to have stationed a large reserve force near Karamza, whence it could advance either on the Chamar Pass or on Medjingerd. Had they done this, or been able to do so, they would have made their feints on Chamar and Medjingerd simultaneously with an attack on the Turkish left from Ardahan, and on the right from Bayazet. The reserve could then have converted whichever of these feints was the most successful into the real attack, and there is little doubt but that one of the two would have succeeded. But, whether it would have succeeded or not, this was the only rational plan: and had Mukhtar Pasha imitated Osman Pasha, he might have inflicted similar disasters on the Russian armies in Asia. Mukhtar Pasha was bound to be all the more careful as, unlike Osman Pasha at Plevna, he was not assisted by a force hammering at the Russians in the south, and holding them in check in the east; for Kars, at the most, rendered him no more assistance than Rustzuk did to Osman Pasha.

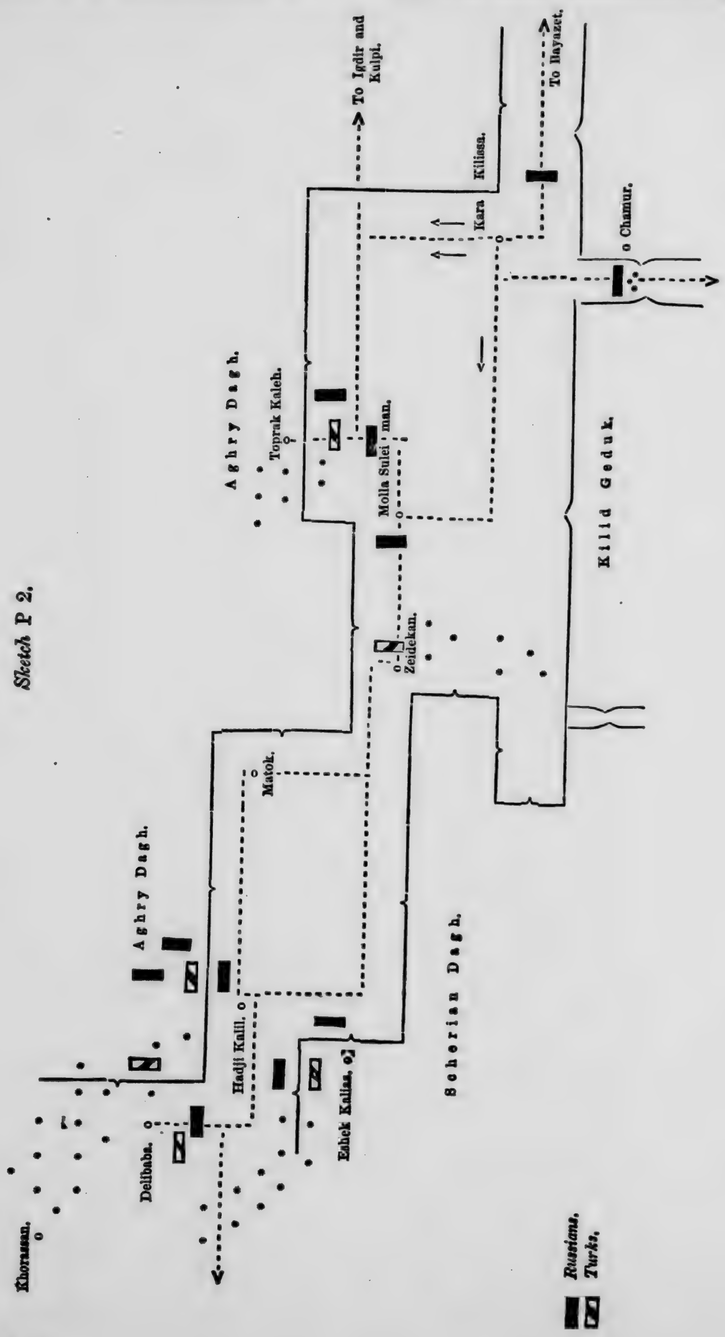


We will now, however, quit criticism, and proceed to facts as they developed themselves.

Whilst General Loris Melikoff was engaged with the capture of Ardahan and the investment of Kars, and reconnoitring the field between Kars and the Soghanli Dagh, General Tergukassoff was pressing on towards Delibaba along the valley of the Euphrates. He occupied Diadin without any serious opposition, and continued his march to Kara Kilissa, where the Euphrates turns southwards, and the Scherian valley commences. Here he was obliged to secure his rear from attack through the Chamar Pass, and sent a body of cavalry forward, which soon dispersed the few troops in Chamar, and then occupied the town till it was relieved by some infantry, who intrenched themselves there, whilst the main body continued its way to Toprak Kaleh and Zeidekan.



Two roads led to Zeidekan from Kara Kilissa, the northern one running *viâ* Toprak Kaleh, where the Turks had stationed a couple of battalions for its defence, with a small body of cavalry. Sending one column along the northern road, and proceeding with the main body, also divided into two columns, along the main road, his right wing fell upon the Turks in the east, whilst with his centre he barred the way to Zeidekan, cutting off their retreat on this place, and with his left he watched Zeidekan itself, to guard against any surprise from this quarter.



There was, however, no surprise in store for him, and the troops in Toprak Kaleh were soon dispersed, and fled across the mountains as best they could; whilst the detachment at Zeidekan effected its escape southwards and westwards on Delibaba. Still, in spite of the slight opposition he met with, General Tergukassoff's progress was slow. The weather was execrable; the roads almost impassable; and he was still further troubled by the reports of a large cavalry force assembling in the Van district

Sketch P.

Sketch P 1.

Sketch P 2.

on his left flank, which obliged him to move very carefully onwards, and leave detachments here and there to watch the approaches to the valley from the south. Thus, at the end of May, he was still engaged in strengthening his position, and bringing up stores and material to the front, which delayed his advance till towards the middle of June. Then he again moved forward, also by two roads, the main road running direct to within a short distance of Delibaba, and the other by way of Matok and Hadji Kalil.

The Turks had taken up a position on the heights east of Delibaba, and north of Hadji Kalil. This formed the left of their position. The centre was in front of Delibaba, facing the high-road to Erzeroum; and the right was stationed in inadequate force at Eshek Kalias, south of the road from Zeidekan. On June 16th, Tergukassoff advanced to the attack, directing his main efforts on the left wing of the Turks, whilst cleverly inserting a force between it and the right wing at Eshek Kalias, and attacking the Turkish centre at the same time, as shown in the preceding sketch, P 2.

For some time the combat on the hills between Delibaba and Hadji Kalias was fiercely waged; but the artillery playing with great precision on the Turkish flank at Hadji Kalias, the Turks began to fall back, and at the same moment the right wing at Eshek Kalias was also driven in, and fled along the road to Erzeroum. Soon afterwards the centre, in front of Delibaba, began to waver, and the reluctant falling back, step by step, of the left wing soon changed, when they saw their retreat being cut off, into a precipitate flight on Khorassan. With this battle, therefore, General Tergukassoff had gained possession of one of the keys to the defence of Erzeroum, and only awaited the orders and co-operation of Loris Melikoff to continue his advance.

Meantime Mukhtar Pasha's retrograde movement still continued. Little by little, but surely, it was shortening the distance between his army and Erzeroum. From Kars he fell back rather precipitately to avoid being cut off by the formidable flank movement of April 30th, which we have already described. He took up his position on the crests of the Soghanli. Thence, after the fall of Ardahan, he fell back again to Delibaba in consequence of a demonstration by the Russians on Olti and Nariman, a large body of Circassians and Kurds, lately added to the central army corps, keeping well in front to prevent a surprise. These troops clashing together with the Russian dragoons forming the *reconnaissances* of Loris Melikoff, imagined that the whole of the Russian army was advancing, and retreated precipitately; so that Mukhtar Pasha, having ascertained that there was no immediate danger to be apprehended from General Tergukassoff, and that the advance on Olti was only a demonstration, took up a fresh position at Zevin. The true secret of this continued retiring was the paucity of numbers of the main army.

Though considerably swelled by reinforcements, the Turkish central force did not come up to thirty battalions, and many of these were at anything but their full complement. A solitary battery represented the artillery element; though another was at Hassan Kaleh, a day's march to the rear. The slightest flank movement of the enemy threatened to necessitate a general engagement, and was accompanied by a rapid packing up and retiring to a new rearward position. One of the generals in command explained, however, that the retreat from Delibaba followed as a necessary consequence of the falling back of the Circassians. On the left flank, and parallel to the main line of communications of the army, the Sarykamish road was covered by the vedettes of the irregular cavalry. These latter once retired, the army was more or less open to a flank attack, and adopted the system of falling back on the junction of the two roads in front of Zevin. So far, indeed, the central corps, under the command of Mukhtar Pasha, was merely doing duty as a corps of observation, or, at most, retaining nominal possession of the ground, and preventing forays of Cossacks in search of provisions. Serious impediment to the advance of the Russian forces it could not then offer. Even as it was, the entire ground between Kars and the position of the Turkish army, three days' march, was entirely undefended, even by irregulars. On the other hand, the Russian expedition against Olti, of 1,500 Cossacks and three infantry battalions, retired before an equal Turkish force despatched against it.

In fact, both the Turkish and Russian generals were playing at cross purposes, each wanting the other to think he had the most men, whilst ignorant of what was going on in the other parts of the field.

The great drawback for the Turks, however, was their want of cavalry. Fifteen thousand Cossacks, hovering like a cloud in advance of the main Russian columns, effectually screened their movements and prevented their points of concentration from being known. To compete against these, a few hundred mounted Circassians and a squadron of Kurd lancers were hurriedly organised to supply the necessary reconnoitring element. Their vigilance and intelligence were counted on to compensate for their paucity of number; but the very first time they came in contact with the enemy, they proved quite inadequate to the mission assigned them. They were surprised, cut up, and retired on the main army, behind which they then camped—a terror and a nuisance to all but the enemy. Mukhtar Pasha was thus forced to have recourse to another means to keep himself informed of the Russian movements. Upper Armenia had ever been infested by bands of Kurd robbers, who, under various chiefs, and in detachments of from ten to twenty, lived upon the country, exacting blackmail from the villages, and pillaging travellers; and it was these men whom the Turkish general had to fall back upon for scouts.

One of these men, popularly known as Tulu Moussa, or Hairy Moses, enjoyed an extensive renown for his successes in the brigand line. When Mukhtar Pasha was governor of Armenia some years before, he had in vain tried to lay hands on this bandit; but as soon as the war broke out, Tulu Moussa, stirred by patriotism, entered into negotiations with the military authorities, offering his services in return for a free pardon. His offers were accepted, and he thus became the pasha's main source of information as to the doings of the enemy. Accompanied by half-a-dozen followers, he scoured the country in front, collected information, tracked out the Russian spies, and even ventured in disguise into the enemy's camp. He was a tall spare man of some forty years of age, sallow-faced and hollow-cheeked, his large black lustrous eyes sparkling with energy. A heavy moustache scarce concealed a half-suppressed humorous expression about the corners of his mouth, and a dense growth of beard vindicated his title to the *sobriquet* of "hairy." His attire was brigandishly picturesque in the extreme. A long tunic resembling that of the Circassians, the skirt reaching to the middle calf, of a dark olive tint, and bound at the edges with broad silver lace, was confined round his slender waist by a belt of many silver pieces with pierced pattern. On either breast was a double row of silver cartridge tubes elaborately chased and ornamented with green enamel. His sabre and broad-bladed Circassian dagger, masterpieces of carving and enamel, the sheaths and hilts massive silver, were set with coral and lapis-lazuli. Wide trousers, and high red-leather boots turning up at the toe, completed his costume. His companions were attired much in the same manner, though less richly. They were quiet, resolute men, but with an unmistakably brigandish air.

Such were Mukhtar Pasha's chief of the "intelligence department" and his aides, and Moussa was well worth a whole regiment of cavalry to him, for the information he brought was thoroughly trustworthy.

Thus Tulu Moussa soon discovered that the forces under Tergukassoff's command were by no means so formidable as his rapid progress would seem to indicate; and at the same time it was ascertained that Loris Melikoff was not prepared to force the Soghanli Dagh for at least some days to come.

Mukhtar Pasha then determined to strike a blow on his right, after having received reinforcements and supplies; and leaving his position at Zevin to the care of Feizi Pasha, he moved down towards Khorassan on June 20th. The next day he sent Ismail Pasha forward with twenty-three battalions, and Ismail, advancing his centre on Delibaba, whilst his left made for Hadji Kalias, and his right for Eshek Kalias, soon succeeded in forcing the Russians back from Delibaba. Tergukassoff, seeing both his flanks outmarched, was forced to retreat precipitately upon Zeidekan, closely followed by the Circassians and Kurds. The Turks still advancing, passing on like a torrent through the valley, did not allow him any rest even in Zeidekan, and he was forced to continue his flight to Kara Kilissa. Here, to his dismay, he heard that the road to Bayazet was in the hands of a large number of Kurds and Circassians, and sixteen battalions of Arabian troops who had advanced from Van, and who effectually cut off his retreat. There was only one means of escape left—that was by the road running north-east from Kara Kilissa across the Aghry Dagh to the Russian frontier (see sketch P).

Along this path, leaving the greater part of his baggage behind him, Tergukassoff fled with his forces; and after a series of the most difficult marches, at last succeeded in reaching Russian territory, and arrived on July 5th, deteated and out-manœuvred and out-numbered, at Igdir, whence he had set out a little over two months before.

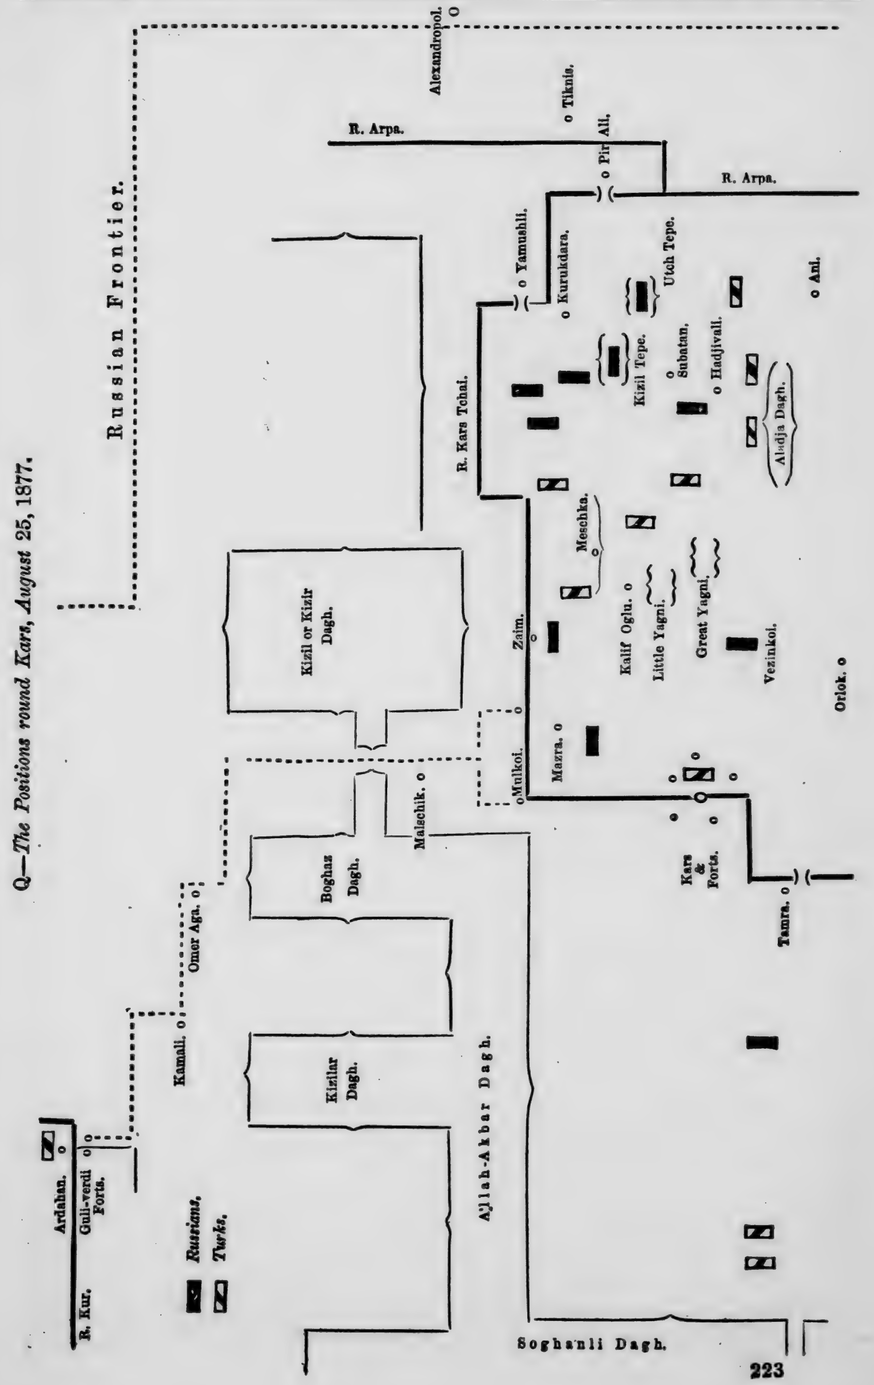
Meanwhile, as may be imagined, the Russian detachments, left to shift for themselves between Kara Kilissa and Bayazet, had a bad time of it. They were driven in, surrounded, harassed, hunted down, and but few escaped by the wild paths leading over the Aghry Dagh; and equally did those Christian villages suffer which had too warmly welcomed the Russian forces and given them any assistance. The same events took place here as occurred in the country south of the Balkans when General Gourko retreated and left the villagers, whom he had stirred up against their Moslem neighbours, to the reprisals of the Turks. All through the valley the Christian villages were sacked and burned, and most of those inhabitants who had not effected their escape were massacred. As for Bayazet, the Russians, thinking only of Turkish regulars, had left but a slender garrison of some 500 men there, and, as we have seen, pushed on towards Zeidekan with their main forces, with the intention of trying to force Mukhtar's position beyond Delibaba. While engaged in this operation, a horde of Kurds, under the influence, if not actual guidance, of Sheikh Jelaledin, swept down from the Ararat chain of mountains, and surrounded the little garrison of Bayazet. The Russians retired within the walls of a mediæval building, half fortress, half palace, which occupied the summit of the hill above the platform on which Bayazet stands. Provisions were scanty, water still more so; and after a couple of days' blockade the Russians offered terms. Round, and in Bayazet at the time, apart from the Kurds, were seven regular Turkish battalions, under the command of Faik Pasha. These had arrived subsequent to the Russian failure to carry the Delibaba ridge. The pasha willingly received the overtures of surrender, and half the entire beleaguered garrison, without arms, marched from their stronghold. But before the regular troops could take any measures for their security, which at the time no one had any reason to doubt, the Kurd horsemen fell on the disarmed and surrendered prisoners, massacring every one without exception. On this the gates of the stronghold were closed, the remaining portion of the garrison refusing to entertain any proposition after the untoward event which had just taken place. In vain the Turkish commander of the regular forces urged on the besieged the expediency of surrendering rather than die of hunger and thirst. The Russian colonel had fallen in the first assault of the Kurds on the town, and his wife, within the beleaguered stronghold, incited the soldiery to resistance, taking her share in the defence like any of the troops. Anything was better, the Russians said, than again trusting themselves to the mercy of a faithless horde of bloodthirsty savages. And so several days went by Water was falling short; but the besieged hit on the plan of mining towards the town, and thus establishing an unseen connection with one of the public fountains. For some time this expedient was successful, the adventurous water-seekers being almost entirely hidden from view in the depths of the subterranean opening. But in an evil day some stray Kurd observed the top of a Russian's hat protruding in an unaccountable manner from the soil. He observed, and soon guessed the truth. An ambuscade was prepared, and day after day the thirsty Russians had to lament one of their number shot through the head at the gallery entrance. Twenty-six days' siege, since the massacre, had gone by. Provisions had long since run exceedingly short, and the besieging enemy had over and over again shouted to the caged foe the intelligence that artillery was coming up to drive them from their refuge. Help, however, was near; and suddenly, on July 15th, as if falling from the clouds, five Russian battalions, with six guns, and 4,000 cavalry, attacked the Turkish force. General Tergukassoff, having received reinforcements from the centre, and having reorganised his troops, had sent these men from Igdir to relieve the beleaguered garrison. The struggle was short; for though the regular battalions resisted bravely, they were forced to retreat, leaving over 1,000 men and three guns in the assailants' hands. The long-suffering detachment in the stronghold above the town were relieved, and, after passing the night in Bayazet, retreated with their deliverers as rapidly as possible, to escape from the Kurds and Circassians, who, as usual, were not where they were wanted,

but were hurrying up from the valley to the support of the regulars.

Such was the end of Tergukassoff's advance. By July 19th, there was not a single Russian in the valley, from Bayazet to Delibaba. The collapse south of the Aghry Dagh had preceded the collapse south of the Balkans by a day.

Meantime, when Loris Melikoff heard of the successful advance of General Tergukassoff, and knowing how much he stood in need of help, he determined to effect a diversion, and was not without hope of forcing the positions of the Turks. This determination was strengthened when he heard of the disaster which had befallen the Erivan corps, and how they were in imminent danger of being cut off to the last man.

In order to prevent such a catastrophe, General Heimann, accompanied by the commander-in-chief, General Loris Melikoff, was detached from before Kars, and, encountering Feizi Pasha at Zevin, attacked him without hesitation on the ridge of rocks where he had intrenched his army (as shown in sketch O). Unhappily for the Russians, the means at hand were utterly inadequate to the task imposed upon the soldiers; and finally, General Heimann, after having experienced severe losses—over 3,000 men killed and wounded—was obliged to retreat in disorder to the point from which he had come.



After this signal victory over General Heimann, Mukhtar Pasha boldly crossed the Soghanli mountains, and occupied strong positions commanding both the roads to Kars, in case the Russians should recover themselves from their defeat and essay to retrieve their position. But General Loris Melikoff, the Russian commander-in-chief, judging his army too weak to besiege Kars and resist Mukhtar Pasha simultaneously, ordered the heavy guns to be withdrawn, and suspended the bombardment, or rather the siege, of that stronghold. Then he prepared for an action in the field, and camped at Zaim, where he decided to intrench himself in formidable positions, and to wait for Mukhtar Pasha's attack, till the expected reinforcements allowed him to push forward again.

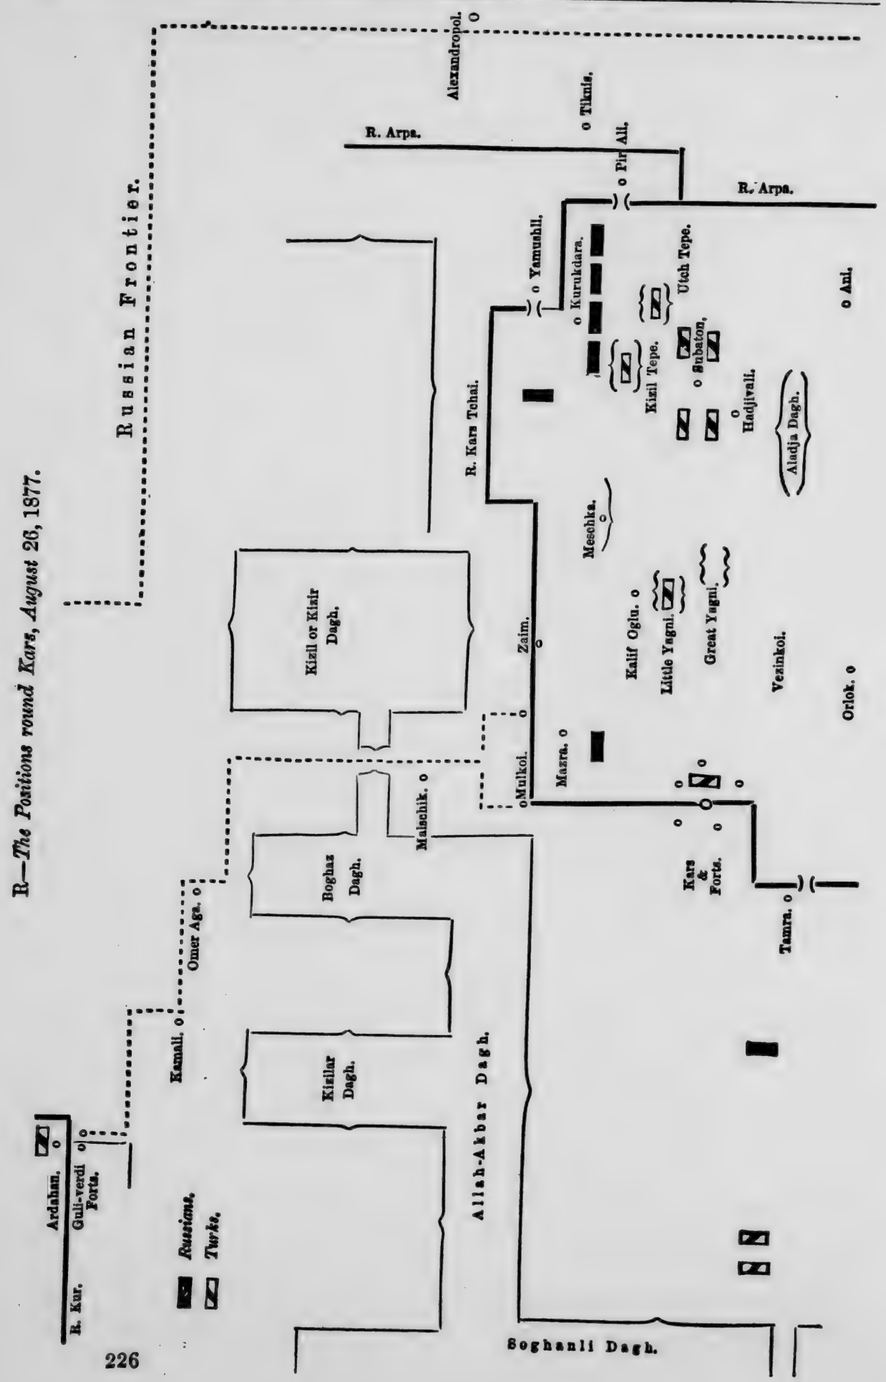
The expected attack, however, not reckoning isolated skirmishes and *reconnaissances* which had no decided result, was delayed from day to day, the *yavash*, *yavash* (slowly, slowly,) of the Turks, as usual, preventing energetic action on the part of Mukhtar Pasha, who was forced to lose much valuable time in waiting for stores, guns, and munitions.

On August 25th, however, the struggle began again on a larger scale. At about three o'clock in the morning the Russians were roused by the roar of cannon and volleys of musketry. They supposed, at first, that only outpost skirmishing was going on between the Cossacks and Circassians; but the noise growing louder and more persistent, it soon was evident that the Turks, contrary to their usual practice, had attacked in the direction of the camp, situated some eight miles off, to the left of the Kurukdara position behind the Utch Tepe.

The Turkish position on the Aladja mountain extended from the neighbourhood of the ancient city of Ani, now dismal ruins, on the Arpa Tchai River, to the vicinity of Kars, from which fortress the supplies were drawn. The main force, however, rested its left wing on the mountain spur ending in the Yagni hills (as shown in sketch Q). Between the Aladja Dagh and Kurukdara there was another steep hill, the Kizil Tepe (Red Hill), which, in an entirely isolated position, towered above the Kurukdara plateau, almost in the very centre of the military positions. On this remarkable eminence the commander-in-chief, General Loris Melikoff, had established his headquarters on August 17th. It was usually occupied by a single battalion and four field-pieces, and was thus considered as almost impregnable. On account of its commanding position over the surrounding flats and undulating grounds it was well worth particular attention, and the Turks determined to carry it if possible.

It was a bright moonlight night. The mountains and plains were almost as distinctly visible as in broad day-time. Availing themselves of this circumstance, at two or three o'clock in the morning of the 25th of August, about 7,000 Turks crept stealthily, in a compact, noiseless mass, through a dark, deep ravine, without being observed by the careless Lesghian pickets and patrols, till they arrived at the very foot of the Kizil Tepe. Here deploying, they made a sudden rush, savagely yelling their "Allah-il-Allah," on the eight Russian companies which were stationed on the summit. These men, though surprised, defended themselves courageously at the point of the bayonet without yielding an

Q—The Positions round Kars, August 25, 1877.



inch. Hundreds of Turks who a few seconds before dashed fiercely on with the rifle in their hands, fell to rise no more. At last, however, as the enemy's fast-increasing force threatened to outflank and envelop them altogether, the Russians were compelled to retreat to the camp, protecting and dragging away their four cannons. Here the alarm was given, and, as quickly as possible, infantry and dragoons marched to the rescue, and stormed the hill with dauntless courage, in the hope of recovering it in the way in which it had been lost. In spite of their heroic efforts, however, they were repeatedly repulsed by overwhelming numbers. The whole hill was like a beehive, thickly thronged with enemies, and had they persisted in their gallant attempt they would have all been exterminated. In the meanwhile the principal Russian forces encamped at Kurukdara had been roused, and battalions, squadrons, batteries, with ammunition carts and red-cross waggons behind, hastened in long columns into the field. At first utter consternation prevailed through the camp, and all was in confusion. Orders were issued to strike tents, pack luggage, and load everything on the numerous commissariat waggons, as the boom of the artillery thundered louder, and the sharp rattling of the breech-loaders grew sharper still. For the moment the Russians thought that they were being attacked by the whole of Mukhtar Pasha's army, and then they began to prepare for a retreat across the frontier. They soon saw, however, that the attack was evidently to gain possession of the Kizil Tepe, and regained their equanimity somewhat in consequence.

Meanwhile the Kizil Tepe, or Red Hill, a dwarfy height of about 800 feet above the plain, was encircled, top and bottom, by two girdles of smoke and flame. On its rocky, bastion-like summit stood thickly crowded Turkish soldiers, under the cover of the opposite slope, and fired their rifles, aiming down into a ravine across which the Russian Tiflis regiment struggled heroically, but in vain, to reconquer the lost position. The very steep, rocky slope of the hill on that side rendered this task almost impossible. The Russians distinctly saw how, in the Turkish ranks, an Imaum, with turban and flowing gown, lifting his hands in fanatical ecstasy above the devoted children of the faith, seemed to be inciting them to withstand the arms of the Moscow Giaour, in Allah's and the Prophet's name. On some other parts of the battle-field Mohammedan priests were equally observed in the foremost lines, apparently animating timid recruits by fervent words of faith. One of these priests was shot. The Turks meant evidently to crush their weakened adversaries by a general attack, and so they employed all imaginable means to secure success. Many battalions, emerging by scores together, and thousands of irregular horsemen, descended the mountain, and were brought at once into action. The whole long line—twelve miles—from the neighbourhood of Ani up to Kabak Tepe, on which lies Meschka, on the road to Kars, was swarming with Mussulmans. On the summit of that eminence, situated two miles to the north of the Yagni Hill, three new battalions and clusters of cavalry appeared, with the view to outflank the Russian army, and capture their camp at Kurukdara. Their general advance, however, was checked as soon as the Russian columns of combined arms, the battalions, squadrons, and batteries which left the camp had the necessary time to march to the enemy's encounter and to deploy before him. In the Russian order of battle the extreme left was held by two regiments of dragoons, then followed the remaining brigade of General Dewel's division, and next to it, in the centre, Colonel Komaroff's five valiant battalions which had seen hard work ever since Ardahan fell. Connected with them, and directing its front line against the Yagni hills, the division of grenadiers operated with one of its brigades (General Cederholm), while the other remained in reserve. The extreme right was secured by three regiments of Caucasian regular Cossack cavalry and their horse artillery. Numerous troops besides protected the camp.

It took some hours before those masses were all able to meet the enemy's lines, on account of the considerable distance which originally separated the combatants. In the meantime the exposed camp was broken up, and thousands of carts and waggons transported the tents and the baggage to Kurukdara. The straw and dung were burnt on the spot. Again and again the Russians tried to reconquer the Kizil Tepe by storming, while shells and shrapnels were showered upon its ridge; but again and again they were repelled by the defenders, who stood, shoulder to shoulder, behind its rocky edge. On a sudden, shortly

after the last assault, which was supported and followed by the play of two batteries, thick white smoke rose on the summit, and a long flame carried it to the skies. Fragments of carriages, limbs of horses and men were scattered in all directions, or flew up in the air. It was clear that stores of ammunition or a powder-cart had exploded, ignited by a Russian shell. Joy and satisfaction lighted up the faces of the officers, and one of them made the sign of the cross. A short time afterwards, as regiment after regiment entered successively the line of battle, from the left to the right, in full array, and advanced, deployed in company columns, preceded by the usual double chain of Tirailleurs, with field batteries between them, the roar of the fighting extended gradually from the left to the centre. It was, however, obvious that before the Yagni Hill the fate of the day was to be decided, because from that part of his position only the enemy might have had a chance of forcing the camp, as it was quite open and unprotected in that direction. Yet long ere the Tirailleurs there had mingled their fire with the boom of their cannon and the cracking of their shells, Colonel Komaroff's brigade in the centre was engaged in sharp infantry fighting. Steadily the Russians gained ground, and drove the Turks over the flats and the undulations till they reached the broad ravine of Subatan, at the foot of the Aladja mountain. In this narrow valley, studded at its opposite side with intrenchments and batteries, the battle came to a standstill, the Russians feeling unable to advance any further, and the Turks satisfied with the advantages they had gained. From advancing beyond, it is highly probable that Mukhtar Pasha's camp might have fallen into Colonel Komaroff's hands. All energy of resistance on the part of the Turks had decidedly been broken; they ceased fighting, and retired in disorder. Their dead lay in rows in the valley. In consequence of this mutual pause on different grounds, the fighting died out there at half-past one o'clock in the afternoon. Komaroff was twice wounded, once in his left hand, and shortly afterwards in his left side. Nevertheless, he continued to exercise his command. Prince Tchadjewadtze, the general in command of the whole cavalry, renowned as one of the ablest and most energetic leaders in the Russian army, was also wounded by the fragment of a shell, which struck him on the head.

While thus the struggle was going on in the centre, the grenadiers, under General Heimann's special superintendence, and led by General Cederholm, fell in with the enemy. After a brisk cannonade with smart shell and shrapnel practice, the deadly rifle-firing was going on in an uninterrupted line stretching two miles on either side, front against front. Like a light morning mist the smoke was wafted over the hostile forces, and prevented them from taking good aim. The Turks had evidently brought forth their picked men—several Arabian battalions, which fought with resolute stubbornness, as they are accustomed to do on all occasions, thus constituting beyond doubt the Sultan's best troops. Notwithstanding their superior numbers, and the bravery they displayed, they could not hold their ground for more than a single hour, and then were compelled to fall back to their rifle-pits and intrenchments at the foot of the Yagni hills. Worn out by the want of food and water, having had all day a sun burning like a red-hot iron over their heads, both antagonists were at last satisfied to see themselves finally separated from each other by intervening hillocks. While the infantry rested, completely exhausted by the heat and the work, the cannons still thundered continuously over the whole line, but with considerably less intensity than in the morning. Finally the Turks moved with three fresh battalions, and over 1,000 horse, down the Kabak hill on the extreme right of the Russians, endeavouring to outflank them. The wild, irregular riders, in their fantastical garments, galloped down until they came unexpectedly in sight of the three Caucasian Cossack regiments. Quietly they stood in the valley, drawn in separate lines, with two batteries of horse artillery in the interstices, whilst the Bashi-Bazouks, one after the other, as they rode on stopped their horses, fired their rifles at the enemy, who did not even reply, and turned back at full speed in order to give to their expectant comrades the dismal news that the time for plundering the Russian camp at Kurukdara had not yet come. They apparently judged that the Russian cavalry was more than a match for them, and in this conviction they united again in squadrons, and thought it prudent to wait, under the cover of a concealed battery, for their enemies' onset. The Russian regiments, however, warned by some shells from above that they were likely to fall into an ambush of artillery and in-

B—*The Positions round Kars, August 26, 1877.*

fantry, did not stir. So the fighting ceased at four o'clock P.M. on the whole line in the same succession as it had begun, from left to right. The result was a complete success for the Turks. Although the Russian troops had repulsed, with great slaughter and remarkable pluck, the general attack of the Turks to cover the attack on the Kizil Tepe, and had remained for four hours on the battle-field, they had been, for all that, unable to wrest the principal position, the Kizil Tepe Hill, out of Turkish hands. Mukhtar Pasha did not hesitate to avail himself of the advantageous position which he had obtained, and shifted next day his whole camp down to the plain, where his soldiers were not exposed to the cold night winds as on the mountain, and found an ample supply of water. Here, as the Turks had systematically done during this war, they began intrenching themselves as strongly as possible, having one wing protected by the Kizil Tepe, and the other by the Yagni Hill. The force which the Turks brought into action consisted, according to trustworthy estimates, of thirty battalions of infantry and 8,000 irregular horsemen, with sixty cannons. The Russian army was somewhat inferior in number. The losses amounted in the Russian army, according to the most reliable information, to 280 men killed and 667 wounded. As the Turks were this time the aggressors, it is evident that their losses must have been more considerable. Spies and deserters affirmed that they lost not less than 3,000 men. Their skirmishing lines were much thicker manned than those of their adversaries; and when they retreated over the Subatan ravine, heaps of dead and wounded encumbered the ground. The chief gain derived from this success was the better camping-ground for the troops in view of the approaching winter, which appears betimes in the highlands of Armenia, and against the cold keen winds of which the men could not have contended on the mountain ranges, covered with snow nearly all the year round, which lie at the foot of Ararat. But in the plain below, sheltered by the accentuated ridges north and south, the conditions changed. Water was abundant. The cavalry horses and mule trains had no longer to be served with water painfully carried in leathern *sacs* to the steep heights on which the Turks had been camped, but could drink in the abundant streams of the plain below. The failure of the Russian attempt to occupy the valley had left immense quantities of uncut corn at the disposition of the army; and the fatigue of transport had been in no small degree diminished in consequence. Still, by some extraordinary fatality, the Turks were unable to make effective use of the advantages they had gained. With the men in high spirits at their successful advance, and continued defeats of the enemy, the chances of successfully dealing a decisive blow had enormously increased, especially as Ismail Hakki Pasha had crossed the Russian frontier near Igdir, with the object of making his way up northwards and cutting off the Russian retreat on Alexandropol.

But with the cold winds of September came also the Mussulman Lent—Ramazan—and at this period the Turk thinks more of fulfilling his religious duties than anything else. During the whole of this period of self-denial and mortification of the flesh, the Turks fast from sunrise to sunset. From the moment the dawn colours the eastern sky until the Ramazan gun booms out into the evening air, not a morsel of food crosses the lips of the soldiers, not even a drop of water. And each of the many times a day as the long-drawn, wailing cry of the Muezzin rises above the murmur of the camp, soldiers are to be seen hurrying eagerly to prayer as to a banquet, and unhappy seems the man on duty who cannot join the serried rows of worshippers who, in company, sometimes in battalion, face toward Mecca, and follow the orisons and genuflexions of the Imaum who stands before their centre. Each man takes his place in the ranks, his hands hanging close by his sides. Then he lifts them to his ears, as if to shut out all worldly sounds. Then he lays them on his knees, and bowing his head forward seems lost in contemplation. After a few seconds he sinks to his knees, and leans back upon his heels, and then bowing with his forehead to the earth, exclaims, or rather chants, "Allah Akbar" (God is great). Three times he thus bows and chants, and then he stands up, bowing forward, chanting three times, "La Illah il Allah" (there is no God but God). The remainder of the prayers which follow consist principally of long extracts from the "Koran."

In all his simple religious exercises the Turkish soldier is devoutness and attention itself, and it is perhaps most in privacy that this is most apparent. Frequently one

comes unexpectedly upon some rugged soldier in one of the wild, lonely ravines that pierce the hill-sides around, standing before the ragged over-coat which serves him for a praying carpet, and going through his rather active religious motions with a zeal which would do credit to the most self-conscious Pharisee. The stranger who for the first time witnesses the united prayer of Turkish soldiers in camp, is considerably puzzled by the selection of heterogeneous articles brought forward to the place of worship when the Muezzin's call has concluded. Religious custom requires that each man be provided with a praying carpet of one description or another, and that he take off his shoes as well. One man brings a jagged sheep-skin, another a goat-hide, a third the saddle-cloth of his horse, a fourth, mayhap, his jacket; every one has something or another on which he may kneel. To see some hundred men thus hurrying to the spot where the blue-robed, white-turbaned Imaum stands, a stranger to their ways might easily be led to imagine them so many persons eager to dispose of superfluous garments, and taking advantage of the fortuitous presence of a dealer of Israelitish nationality.

The Russians, too, seized the opportunity of celebrating national festivals. On September 9th the Turks were startled by the thunder of cannon from Karajal, the fortified hill on which their right flank rests. The marshal's long brass telescope was at once put in position, and every field-glass was directed against the frowning heights along which the heavy white smoke-clouds clung in the morning air. But they looked in vain for the little secondary smoke-bursts that should have indicated exploding-shells. In advanced positions men ran to their arms, and the parapets were black with eager, puzzled soldiers. But it was only a salute of twenty-one guns in honour of the anniversary of the Czar's coronation. "May Allah destroy him!" was the appropriate Moslem exclamation, when, after due search in a Russian military almanack, the cause of the salute was discovered and conveyed to the soldiery. Three or four days after another blank salute sent them again to their almanack. This time it was an imperial birthday, that of the Emperor or Czarevitch. Whichever it was, the object of the salute had the same Turkish good wishes as on the former occasion. Sometimes there was a light cavalry skirmish out in the plain; and on such occasions 'a good deal of artillery fire was apt to take place as the combatants came within range of the guns on either side. As a rule, some five or six men were killed, and twice as many wounded. Rarely did the affair go further.

Towards the end of September, however, the Russians having received considerable reinforcements, there were indications of a renewal of the struggle. These reinforcements consisted of the 1st division of the Moscow grenadiers, sixteen battalions, each fully 1,000 men strong, together with forty-eight field-pieces, and two regiments of cavalry. After almost equally long deliberations, it was decided to make a general attack on Mukhtar Pasha's position on the Aladja mountain and its dependencies of spurs and isolated hills, forming—from the Arpa Tchai river, in the neighbourhood of Ani, to Kars—a continuity of natural strongholds, intrenchments, and batteries. October 2nd was fixed for its commencement. Although deep secrecy had apparently been kept among the superior generals on the subject, enough of the plan of operations transpired beforehand to leave no doubt about the general features of the impending operations. Everybody in the camp knew what was about to go on, to the great astonishment of the staff. At last they became aware that a man of certain consideration, who was in the habit of sneaking through the camps, without professing to follow any honest vocation or business, had disappeared on the very eve of the day of action. Though no conclusive proof of his guilt was brought forward, public opinion adjudged him guilty of being a Turkish spy. He did not return, warned, perhaps, by a bad presentiment or some accomplice.

The general plan of operations was as follows:—General Sholkownikoff, who, in the absence of General Dewel, was in command of the 40th division on the left, was ordered to turn the Aladja Dagh from Ani with five battalions and a battery. He was expected to reach its summit, and, descending from it, to fall on Mukhtar Pasha's rear. A brigade of the same division was to keep the enemy at bay on his right wing, assisted by a heavy battery established there some days before, which, as a mere demonstration, had to cannonade the Kizil Tepe. Here no assault was premeditated, and the object was only to draw the enemy's attention to this point, important for him, but

not for the Russians. To General Heimann, with the Circassian division of grenadiers, was entrusted the task of closing in with the enemy's centre and main force, so as to prevent him from withdrawing his troops from Subatan, in order to reinforce other positions which it was intended to take, if possible. To his right, the 1st division of the Moscow grenadiers, at General Loris Melikoff's direct disposal, had to act against the Yagni hills. The Great Yagni, situated about ten miles from the Russian camp, was a very regular conical hill, with a plateau at the top, towering 750 feet over the plains and smooth undulations stretching from Kurukdara to Kars. A direct assault on that hill, which on former occasions had cost the Russians a good deal of blood, was considered as likely to lead to no good result, and in consequence its capture did not enter into the original dispositions.

The real and most important point, according to the views of the staff, against which all efforts had to be concentrated, was Little Yagni, an entirely isolated, bulky elevation, with a comparatively extensive platform on the top. Though of considerably less height than its namesake, its sides were quite as steep, while a rocky crest, very much like that of the Kizil Tepe, bordered its extended summit. This, however, did not consist of a uniform level, but was separated by an intervening flat depression, so as to form three distinct terraces, of which the southern one was about 200 feet higher than the northern. This hill, situated at a distance of about nine miles from Kars and two from the Great Yagni, completely stopped the road from Kurukdara to that fortress. It is very probable that the information upon which it had not only been strongly fortified and garrisoned by Turkish infantry, but was also armed with twenty cannon of heavy calibre, was received from spies. The honour of taking by assault this commanding point was conferred upon the 2nd brigade of the Moscow grenadiers, under Major-General Count Grabbe, and eight battalions detached from Ardahan for that purpose, under General Komaroff, who had been slightly wounded on the 25th of August, but had since recovered. His fellow-sufferer, General Tshadtchewadze, wounded on the same day, had also reassumed his command of the whole cavalry. Three battalions, which, as a rule, garrisoned the fortress of Alexandropool, had also been ordered to Karajal, to cover the camp and head-quarters, and to form the reserve of the 2nd brigade of the 70th division, which had nothing to do but to check an improbable offensive movement of the Turks against the Russian left wing opposite the Kizil and the Yagni Tepes.

The general object apparently was to carry out a complete turning movement on both hostile wings, either to surround Mukhtar Pasha entirely, or to cut off his communication with Kars. Could this have been effectually managed, no doubt he would have been compelled to surrender with his army within a few days; for, his supplies of ammunition and provisions being in danger of immediate exhaustion, he must either have broken through the Russian lines, or tried to make his way with disbanded troops across the Russian territory, in the hope of joining his comrade, Ismael Hakki Pasha, who was still intrenched before Igdir.

The troops ordered for the advance started from their camps at eight o'clock in the evening of October 1st. At three o'clock precisely the next morning the staff followed, riding at a moderate speed, to the south-west, on a country track over the vast plain. The way was lit by the waning moon and countless stars shining with intense brilliancy. A cold wind made the trip by no means pleasant, as it brought the temperature near to the freezing-point. The staff consisted of about fifty persons—general officers, aides-de-camp, and servants—escorted by three sotnias of Cossacks from the Caucasus, not armed with lances, but accoutred and dressed like genuine Circassians. The ground, in appearance almost level, was, in fact, cut through at intervals by a few rocky ravines, between which lay long-stretching undulations rising gradually towards the south. After two hours and a-half of wearisome riding, they arrived at dawn of day at an eminence some 150 feet above the flat-topped ridge of the rising ground called the Kabak Tepe (Pumpkin Hill).

Hitherto no reports of fire-arms had been heard. But from the top of this commanding point, at half-past five, sharp and general firing suddenly began. To the right and left, the roar of the cannons, and the sharp, dry, knocking, rattling of the musketry came down, sounding in the distance like the noise produced by the work

of some hundred road-makers, breaking flint-stones in a re-echoing hall. The principal object of attack, the Little Yagni, rising now clear in sight, frowned over the plains of Kars like an impregnable fortress. Its summit was surrounded with breast-works, ditches, rifle-pits, and batteries. The Moscow grenadiers and the Ardahan division were already supposed to be at work, but in fact they were not. There were only some forty guns firing, with a range of three miles, at earthworks which were prudently left empty by the Turks. Had the infantry been led immediately to the assault in tirailleur lines before the dawn of day, without firing a single round they would have carried that hill, in all probability, within half-an-hour. In the way the attack was conducted, it was obvious that the enemy, who had there about 3,000 men, had time to bring all his available means to the defences.

As it was, the twelve hours' cannonading did no harm whatever to the earthworks, and inflicted only trifling losses on the garrison, for they had, for the most part, retired to the sides of the hill that were out of range. Meanwhile, on the centre, the impetuous General Heimann had already hurled his division in skirmishing lines against the Aladja mountain, and its northern continuation, the Olya Tepe, separated from it by the upper part of the ravine running down to Subatan. The incessant sharp volleys gave evidence that the Turkish main force had been concentrated there. It was soon clear, also, that a direct assault on those rocky steeps and terraces, strengthened by numerous intrenchments and stone barricades, had no better chance of succeeding than on previous occasions. Within the first half-hour it was clear that the carefully elaborated plan of operations again combined all the faults of previous tactics, magnified, moreover, by the absence of that dash which, at the beginning of the present campaign, was characteristic of the Russian army.

Some one seems to have suggested, and brought others to believe, that in this breech-loading time an assault by infantry is obsolete and unnecessary, and that all war might, with less effusion of blood, be just as well, or better, done by the artillery alone. Such seemed to be the erroneous idea at head-quarters. Yet, of all the shells fired during this, or any other war in recent times, by way of preparing an infantry attack, but very few, indeed, ever caused serious damage. During the battle of Aladja Dagh, when they burst in the earth, it was at such a depth that their weak charges were unable to overcome its resistance, and, consequently, the fragments did not fly off. They only exploded properly when the shell happened to strike on a rock or other hard substance; whilst at the ridiculous distances of above three miles from which they were fired, they produced little more than an harmless shower of leaden drops. Anyhow, artillery alone was not capable of dislodging such stubborn soldiers as the Turks, and thus the cannon still boomed at the rocks and the earth, while masses of infantry were either idling as reserves in the depressions of the ground, or were employed in a disastrous but useless skirmishing with the enemy. For hours each tirailleur lay behind a heap of stones, which he had previously piled up for his shelter, and took a deliberate aim at some similarly protected adversary. Such fighting only kills and wounds, without the hope of a useful result. At six o'clock in the morning, this state of things was, on both wings, as clear as the rising sun, whose rays gilded the glorious white crown of Mount Ararat. In the centre stood, three miles off, cutting the blue sky with its regular conical profile, Great Yagni. It covered the front of Mukhtar Pasha's centre and left wing, commanding the plain before them, and enjoyed the reputation of impregnability, since at different times various Russian assaults on its steep slopes had been repulsed with considerable loss. From its foot to its top it was covered with rifle-pits and ditches in three superposed rows, cut in conformity with the configuration of the ground in projecting and re-entering angles.

The prospects of success there appeared, indeed, so very poor, that it was considered, by the Russian staff, useless to attempt the conquest of that natural fortress. Therefore, only a demonstration, supported by a brigade and two batteries, was intended against it, calculated to distract the enemy's attention from the more serious attacks on the Little Yagni. But on examining the Great Yagni, it was found that its garrison was exceedingly feeble. The breastworks on its base and its middle were not manned at all; and even the fortifications bordering the top plateau were only very insufficiently

armed, as was proved by the spasmodic and unconnected rifle-firing and the apparent absence of cannon. On learning this, General Loris Melikoff ordered a general assault on the hill. From three sides the troops advanced in skirmishing lines, with supports and reserves, cheering as they passed their commanding general, who spoke to them some encouraging words. The cannons, redoubling their firing, flung shrapnel after shrapnel to the top. An hour afterwards the whole hill was swarming with grenadiers, who steadily climbed up its steeps, despite the frantic firing of its defenders. At eight o'clock, the Turkish battalion on the summit of the Great Yagni had ceased to exist. The Russians had entirely occupied the impregnable hill, and were waving joyously their caps and muskets.

While this was being accomplished, the indifferent cannonading on the right, between the Russian batteries and those on the Little Yagni, was still going on. It might have continued for a century, and nothing would have come of it. As soon as it became evident that the men on the top of Great Yagni were genuine Russians and not Turks, the staff rode off in order to inspect the conquered position, and to decide the further course of operations now possible through so brilliant a beginning. The hill was rather too steep for the horses, and they rode round it to the right, over the plain two miles wide which separated it from Little Yagni, between which and Kars one of the Russian infantry regiments had already been deployed in skirmishing order, and was engaged with that garrison, whilst strong bodies of cavalry, commanding that plain, challenged in vain the Turkish irregular horsemen. All their ferocious Circassians, disgusted on account of their receiving neither pay nor food, had left Mukhtar's camp in a wholesale desertion a fortnight before. Only worthless, cowardly Kurds remained for the sake of murder and plundering.

Having arrived on the slopes of the Great Yagni, General Melikoff surveyed the field. Opposite to the Great Yagni ran a high barren ridge, sloping gradually upward to the flat-topped summit of the Olya Tepe, which was severed from the Aladja mountain by the Subatan ravine, about two miles above the village of Hadji Velikoi. This commanding point—the most important of the whole Turkish position, and subsequently well fortified — was literally inaccessible from the plain at the foot of the Aladja, towards which it fell off some 1,500 feet in a succession of steep gradients and perpendicular rocks. At its base the Turks had concentrated their main force; and Mukhtar, relying on the strength of Great Yagni, had neglected to occupy the summit with the necessary troops. This fact had been ascertained by the cavalry patrols. Two squadrons of Cossacks had even remained for two hours at Vezinkoi, a village situated to the south of that elevation, right across Mukhtar's only line of retreat, where they met not a single Turkish soldier. The pasha, moreover, was utterly unable to send a sufficient force quickly enough to the Olya Tepe, because he was closely pressed in front by the 2nd brigade of the Caucasian grenadiers, under Major-General von Schack, a Prussian by birth and education. Six of the Russian battalions had just descended the Great Yagni; six others were near at hand; and had they been momentarily withdrawn from the attack on the Little Yagni, it is probable that they would have taken the Olya Tepe, almost without loss, from the side of its totally unoccupied southern ridge. Possibly such movements did not enter the original plan; but plans are worthless when the fighting has once begun, and all depends on the capacity to seize the favourable opportunity.

It seems that General Loris Melikoff asked an officer whether he knew the road to Vezinkoi. The Olya Tepe was obviously the only tactical object worth storming at any cost; it was the magic point from which the fate of the day was suspended by a thread. Its occupation by the Russians would have unavoidably led to the destruction of Mukhtar Pasha's entire army. Its very key, the Great Yagni, was already in their hands. But at this moment, General Heimann, in an interview with Loris Melikoff, was pleased to assert formally that his troops, advancing from the Subatan plain, were quite able to finish taking the Olya Tepe, as they had done with the Great Yagni, and that, therefore, the available force might be advantageously employed against the Little Yagni and the garrison of Kars. This strange opinion prevailed. General Loris Melikoff's genius was impaired by pernicious advice. His whole staff recognised it, but nobody ventured to utter an objection. General Heimann, of course, did not take the Olya Tepe as he

had promised, in his sanguine fashion, but was, on the contrary, repulsed with considerable loss; while the three brigades ordered to assail the Little Yagni had no better chance. Even had the Russians had a reserve of 50,000 men more, they, too, would never have succeeded in the attempt of taking those fortifications and works by assaulting them. This was conspicuous enough at nine o'clock in the morning; and the wisest plan would have been then to withdraw the troops, for the opportunity had been missed.

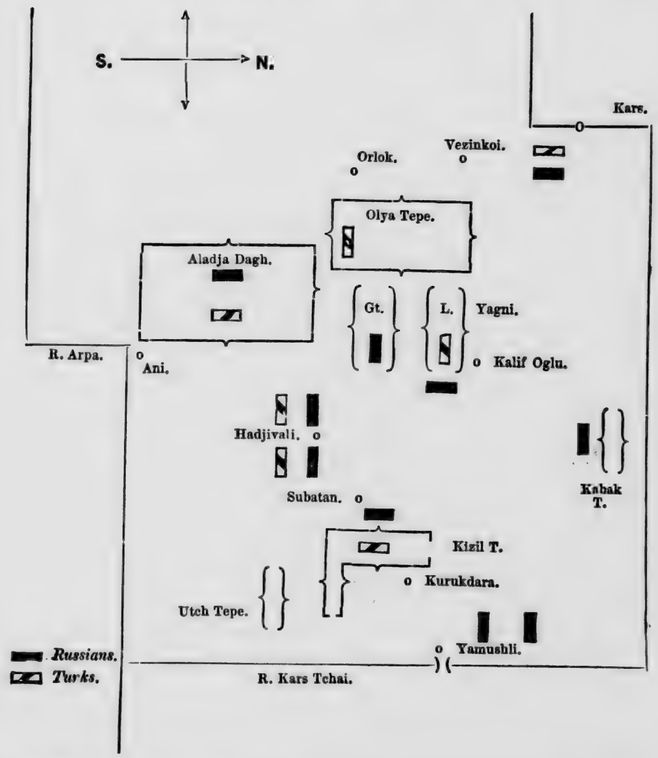
The staff turned its back to the Olya Tepe, and followed the zigzags of the road which the Turks had recently made for the convenience of the garrison on the summit of the Great Yagni. Company after company, as they descended the hill, cheered the commanding general, who wished them good luck. On the hill-side lay a young grenadier, moaning as he tried to lift his head and rest on his elbow to answer the questions and receive the consolations of the general. Overcome, however, by weakness and pain, he fell back and shut his eyes, while the blood still gushed from the wound in his side. Higher up, a dead Turk, stretched across the narrow track on his face, compelled the staff to make a circuit. On reaching, at last, the level top of Great Yagni, a ghastly sight struck their eyes. All the pits and ditches around were filled with the corpses of Turks. The dead were almost all shot through their heads, because the remaining parts of their bodies had been sheltered by the parapets. Here they lay as they fell, on their backs or faces, side by side, or one above the other. A negro with grinning teeth hung right across a white soldier, and his long arms stretched out over the rocky abyss. Some preserved the ferocious expression which they had borne when still alive, and lay with clenched fists and distorted limbs; others, calm and quiet, looked like stone. In a pit, opposite each other, sat two Softas. Though in the uniform of soldiers, they were easily recognised as religious students by the white muslin band tied around their fezzes. One had his skull laid open by a shell-fragment, and the other was shot through the temple. Both had obviously been killed by the same shrapnel. Some hundred dead bodies encumbered the trenches; others lay strewn over the hill-side.

Meanwhile General Heimann vainly endeavoured to force the position of the Turks on the southern bases of the Olya Tepe, and soon asked for reinforcements. These could not be spared as long as the attack on the Little Yagni was being carried on; and this hill the Russians erroneously looked upon as the key of the position. At one moment it seemed as though success were about to crown the endeavours of the Russians to carry the Olya with success. This was when, at about 1 P.M., General Scholkownikoff's brigade appeared on the heights of the Aladja, in the rear and flank of Mukhtar Pasha's position. But Mukhtar Pasha had taken his precautions, and had posted a force on the Aladja Dagh, which not only effectually checked Scholkownikoff's advance, but also forced him to retreat.

With this failure to force Mukhtar Pasha's rear, the battle was practically at an end.

In its immediate results the success of the Russians was a barren one, as will be plainly seen on consulting sketch S, which represents the field looking from Kurukdara towards Kars. They had succeeded in inserting a wedge between the extreme left and centre of the Turks on the Great Yagni; but were there confronted by the positions on the Olya Tepe, and, moreover, exposed to the fire of the Little Yagni and the battalions on the northern slopes of the Aladja Dagh. The position was clearly untenable, and, if tenable, useless except at a large expenditure of time, and trouble, and blood, in fortifying it and erecting batteries to bear upon the three positions of the enemy around it. Consequently, it is not surprising that the Russians should have withdrawn the troops who had occupied it, as they did on the following day.

But though the immediate results of the day were barren, the indirect gain was great, as the success of General Scholkownikoff in gaining the rear of the Turkish positions, demonstrated the possibility of dealing a crushing attack against Mukhtar Pasha in this direction, if carried out in sufficient force.



And not only that. It had also been discovered that the Olya Tepe was the best key to the positions of the Turks. As long as that remained in their hands they could always fall back upon it from the Aladja Dagh and the Little Yagni, and thence retreat into Kars. But the Olya Tepe once in Russian hands, the retreat to Kars would be intercepted, and the whole Turkish army

be surrounded if, in addition to the Olya Tepe, the Russians should also gain the rear of the Aladja Dagh in force.

Mukhtar Pasha plainly saw the danger of his position, but he was almost powerless to avert it; for whilst the Russians had been receiving reinforcements daily, his own army had been growing less and less. There were only two courses of action reasonably open to him. These were, to take

At half-past two o'clock, P.M., the Russians saw three strong lines of Turkish tirailleurs, one behind the other, advancing, rifles in hand, at a quick pace. They occupied a front of at least three miles in length, were preceded by two batteries, and followed by compact supports and reserves, all arranged in perfect order. The whole force consisted of about 15,000 men, having their right wing covered by the Kizil Tepe,

S—*First Battle of Aladja Dagh, October* 2, 1877.

a vigorous offensive, and endeavour to strike a decisive blow on the Russian camp at Karajal and Kurukdara, or to fall back with his whole army on Kars, and continue his retreat to Erzeroum.

The latter would probably have been his best course; but he was naturally disinclined to retreat; and so, on the following day, October 3rd, he decided on making an attempt to dislodge the Russians from their camp on the Karajal.

and ready to make a desperate attack on the Karajal camp. They supposed that the greater part of the Russian forces had been brought over to the right wing. They were the more led to believe this as, on the previous day, no signs of troops had been shown at Karajal. General Lazareff, however, with the 40th division, backed by a regiment of the garrison of Alexandropol and numerous horsemen, lay in ambush for them during the course of that day: for the

Russians, having received information, through their spies, of the projected attack, were quite prepared to receive the assaulting foe. Their soldiers lay in rows concealed in the folds of the ground, or behind pyramidal heaps of loose stones. Ostensibly, only two battalions and a battery, together with some cavalry, leaving the Karajal position, marched to the fight. The Turks, encouraged by this apparent weakness, hastened their steps. Their batteries galloped ahead, and opened a brisk shell-fire on those of the Russians, who replied steadily with only eight guns. At the same time the Kizil Tepe flung shell after shell at all moving objects on the field —ammunition carts, red-cross waggons, cavalry, herds, and labourers—but without hurting anything but the soil. The skirmishers, too, rattled away while the Turkish infantry drew nearer and nearer, without firing a round. They dived down into the ravines and reappeared, always resolutely advancing against the Russian cannons, which had in the meanwhile been reinforced by another battery of eight pieces. Although both were exposed to the bullets, they made no preparations for limbering up, but continued their slow firing. The Turkish batteries were soon silenced by the advance of their own men, who masked them.

At last the Turks saw the sunbeams dancing on the levelled rifle-barrels peeping behind stones and sods, and began firing with frantic rapidity, but did not slacken moving ahead. Only stray shots from sharpshooters answered the challenge. Finally, however, the Russians lost their temper, and, returning the fire volley for volley, showed a line of battle of no less extent and power than that of their adversaries. Then they rose together and faced the shower of lead, advancing and firing, firing and advancing, line after line, running from cover to cover, but always moving ahead, right down on the enemy. Every soldier seemed to believe that the grand duke's eyes were especially fixed on him. It was refreshing to see how this division, in contrast with the monotonous unproductive skirmishing of their comrades on the previous day, went on without a moment's hesitation, with admirable and matchless courage. The Turks became demoralised by this unexpected resistance, supported by forces quite equal to theirs, if, indeed, not superior. Their advance was checked, and came to a standstill. Soon they retrograded slowly, but always firing. It was of no avail. They were driven back irresistibly from undulation to undulation, till at last they turned their backs and ran, seeking shelter behind their pits and breastworks. But again and again the Russians followed and dislodged them at a rush with the bayonet, compelling them to recede, either step by step, or in short runs. The Turks became, from minute to minute, more disheartened. Soon they had had enough of the game, and shortly after nightfall were in precipitous flight towards their fortified camp around Subatan. General Lazareff pursued them fast, even through the dark. His lanterns were the incessant sparkling of the long line of firing rifles, and the occasional broad flash of the cannons. When he had lost sight and feeling of the frightened enemy in that pitch-dark night, the firing died, when they took refuge behind their intrenchments; while the Russians, after having thrown up breastworks and pits, passed the night on the ground they had so gallantly conquered. Their losses were severe; the 40th division alone losing over 700 killed and wounded. Altogether, the two days' fighting had cost about 9,000 men.

The failure of his attempt on the Karajal positions, coupled with the intelligence that the Russians were still receiving reinforcements, decided Mukhtar Pasha to draw in his lines; and at the same time, sending orders to Hakki Ismail to recross the frontier and fall back upon Delibaba, he ordered, on October 8th, the evacuation of the Kizil Tepe and the lines at Subatan. This was carried out with complete success; for on the morning of the 9th October the Russians were infinitely astonished at the nocturnal retreat. Still they lost no time in taking advantage of it; and towards eight o'clock the entire Russian army was in movement, advancing straight towards the abandoned positions. Seven squadrons of Cossacks, preceded by a long line of cavalry skirmishers, came first, closely followed by an ominous-looking line of batteries. It was a moment of intense anxiety for the Turks, who believed the enemy was about to make a general assault. The Cossacks entered Subatan, and five minutes after, eight guns were in position on the ridge above the village. Hadji Veli was next occupied, and simultaneously a column of infantry scaled the isolated hill of Kizil Tepe, the capture of which had earned for Mukhtar Pasha the

title of "Ghazi," or "Victorious," conferred by the Sultan, together with a sabre of honour, a decoration in diamonds, and two horses from the Padishah's own stables. The Russians at once opened fire, believing for the moment that the whole army was retreating; but by the evening they became aware of the true nature of the movement.

On the 10th all was still. Not a shot from either side, except from one large position gun which the Russians had established on Kizil Tepe, and from which they threw occasional shells against the redoubt on Lakiridgi Tepe, a conical hill on the extreme right of the Turks. Large masses of Russian troops moved over the plain by Kabak Tepe, ultimately reoccupying the greater Yagni Hill, and erecting a heavy battery on the slope commanding the Olya Tepe, whilst long columns were seen by the Turks, defiling towards their right, marching in the direction of the ruined city of Ani, on the banks of the Arpa Tchai river. They subsequently disappeared, and the Turks were quite at a loss to account for their destination, till in the afternoon the marshal and his staff rode to the summit of Aladja to reconnoitre, and soon divined the nature of the movement. The fact was, that General Lazareff, with twenty-six battalions, forty-eight field-pieces, and six regiments of cavalry, was directing a flank movement from the south-east on Mukhtar's line of communication with Kars, and eventually Erzeroum; General Scholkownikoff's experiences having demonstrated its practicability. At the same time a field-telegraph line was established without interruption from the Karajal head-quarters to General Lazareff's division, following him all along his circuitous march of at least forty miles through a mountainous, hostile country, completely in the rear of the actual Turkish positions: and that this was accomplished without opposition or interruption, fully proves that Mukhtar Pasha was ignorant of Lazareff's flank movement. The telegraphic communication was indeed once interrupted, and much anxiety was felt about it; but within two hours it was re-established. The wind, and not malicious Turks, had thrown down some of the poles. This shows, therefore, that the pasha's hasty retreat from Subatan and the Kizil Tepe was prompted by the comparatively enormous losses he had sustained from the relentless fighting during the week previous to his withdrawal, from wholesale desertions, and the reinforcements of the Russians, and not by General Lazareff's intrepid interposition. Had his valuable Circassian scouts not disappeared, driven away in despair and disgust, they would have assuredly succeeded in fathoming the Russian design, or at least in destroying the telegraph line, which enabled a simultaneous movement of two columns to be carried out, the object of which was to envelop Mukhtar Pasha, and compel him either to starve on his barren cold summits or to surrender, for General Lazareff was directed to attack and occupy the Orlok summit and Vezinkoi, while the main army attacked the same points from the front.

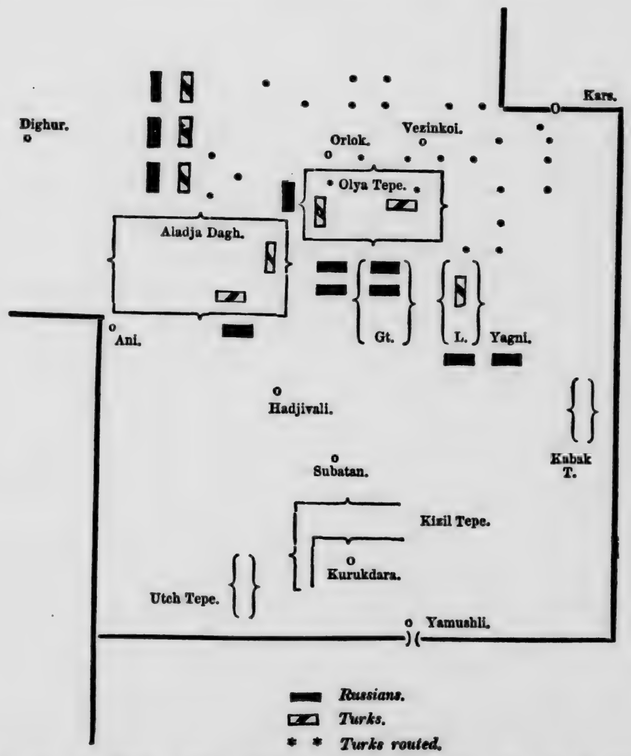
Meanwhile, Mukhtar Pasha took such precautions as he was able against the turning movement being carried out by General Lazareff, and sent Selim Pasha with fifteen battalions to meet him, reinforcing this body of men subsequently with a second division, and entrusting the whole command to Raschid Pasha.

Against this force, however, General Lazareff was marching with twenty-seven battalions, forty guns, and six regiments of cavalry. His march across the mountains was, of course, somewhat hampered by his cannons and military train, which compelled him to seek and follow a rather circuitous carriage road. He was at first guided by the Arpa Tchai river down to Kotchiran. From here he passed over to Dighur, where he left two battalions; and then, wheeling round to the north-west, he chose for his mark the Orlok Hill and Vezinkoi. This village, strongly intrenched, secured Mukhtar's position and his communication with Kars; and Raschid Pasha's duty was to prevent their falling into the hands of the Russians. But after a sharp engagement on the 12th October, in which Raschid was overpowered by the superior forces of the Russians, Lazareff occupied the Oghur Hill, in the rear of the Aladja, on the following day. Then he telegraphed to the grand duke's head-quarters that Mukhtar was before him with superior forces, and he urged, therefore, that a simultaneous attack might be directed against the Turkish lines from the Russian front. This message reached the grand duke precisely at three o'clock on the morning of the 14th. The commander-in-chief at once complied with Lazareff's request. That this was possible was solely

due to the remarkable circumstance that a field telegraph had been established, with laudable celerity and regularity, throughout the length of the circuitous line of operations.

The necessary dispositions were speedily taken, and, on October 14, General Heimann was charged to carry the Olya Tepe at any cost, and had for that purpose the division of the Caucasian grenadiers and fifty-six cannon at his disposal. The Moscow grenadiers, posted on his left, received orders to refrain from acting until that hill was taken. They formed the reserve, and observed the enemy's movements on the Aladja Dagh. Opposite this mountain a heavy battery of 24-pounders had, since the 12th, bombarded the enemy's camp there night and day, at intervals of fifteen minutes, in order to disturb it and harass the Turks. The right wing was covered by the Ardahan brigade, under General Komaroff, and some regiments of cavalry, which were intended to check the garrison of Kars, and that of the Little Yagni. These positions are shown in the preceding sketch, which exhibits the plan of attack and its ultimate result. Early in the morning of October 15, the action commenced with the attack on the Olya Tepe, whilst General Lazareff gradually worked round from the position indicated in sketch T, to the north of Orlok and Vezinkoi.

Soon the Olya Tepe was encircled by two broad rings of white smoke—one around its basis, produced by the incessant firing of fifty-six cannons, and the other, on its summit, by the musketry and artillery of the Turks, and the bursting Russian projectiles. This time the Russian gunners behaved well. They had placed their pieces at the reasonable distance of 1,800 yards, and laying aside the inefficient shells, concentrated a shrapnel shower on that part of the enemy's front which had been selected to be assailed by the storming battalions. Balls of white smoke, waving for awhile in the calm air like balloons, indicated that the terrible messengers of death and destruction had burst at the proper point for sending fragments and bullets among the lines of the defenders, whilst three strong columns of grenadiers lay in clusters on the steepest parts of the northern side of the hill, waiting there for final orders, in comparative security, because the Turks behind the breastworks were unable to hit them. Seeing this, Mukhtar Pasha sent a strong line of Turkish tirailleurs from the Aladja Dagh opposite, to the rescue of the hard-pressed position. But before they could even cross the ravine their advance was arrested by a Russian line, which compelled them to withdraw. At the same time the three columns of Russian grenadiers told-off for the assault on the Olya Tepe moved onward up that hill. These troops at once swarmed on all sides over the yellow hill. Steadily they climbed towards the summit, always firing, in face of the desperate resistance of the Turks, who disappeared in the smoke. Onward the Russians stormed, crowding more and more together as they approached the cone, towards the enemy, while their batteries covered the top level with shells and shrapnels; till suddenly repeated hurrahs sounded through the air, and the grenadiers jumped in crowds over the enemy's ditches and parapets. Then the Turks, relinquishing all hope, ran for their lives, pursued by bullets and bayonets, and the first position on the Olya Tepe was won at last.



The next fortified plateau to the south-west, situated just before that of Vezinkoi, was also stormed within an hour, and the white smoke rose on the opposite side of that village. There General Lazareff assailed the enemy from his rear, and barred his retreat to Kars. The batteries also closed in with the scattered Turks wherever they perceived them, and covered them with a hail-storm of projectiles. The vanquished foe tried to rally and escape in all directions, but found no issue, and was soon closely hedged in by infantry, artillery, and cavalry. Here it is said that Mukhtar himself was wounded in the hand, and sought for attendance and shelter in Kars, abandoning thus his doomed army. In truth, however, he had not received a scratch. He had commanded the battle from the summit of a hill to the east of the Olya Tepe, and had a narrow escape to Kars with his staff, by availing himself of the opening between the Russian centre and General Lazareff.

Another party of Turks—the bulk of the garrison of the Olya Tepe and its environs—were pursued through a pretty large valley, which is formed by the upper part of the Subatan streamlet and its tributaries; but the garrison of the Little Yagni managed to effect its escape with all its guns and stores. Meanwhile, the troops on the

Aladja Dagh, and a great number of those at Orlok and Vezinkoi, finding themselves surrounded, were obliged to yield. This wholesale surrender amounted to twenty-six battalions, thirty-six cannons, and seven pashas, amongst them Raschid Pasha himself; altogether, about 12,000 prisoners. The losses in killed and wounded, on the Turkish side, amounted to over 5,000 men, whilst the Russians escaped with about 2,000.—On the following day, October 16th, Mukhtar Pasha remained at Kars, where he left 11,000 men, and on the 17th proceeded, with the remnant of his army (about 3,000 men), towards Erzeroum, to effect a junction with Ismail Hakki Pasha, who was threading his way towards Hassan Kaleh, pursued by General Tergukassoff. Kars alone blocked the way to the Russian advance; and held by a defeated, disorganised, disheartened force, and that force even insufficient, it was not to be expected that it would long remain an impediment in the way of Loris Melikoff. Thus the campaign in Armenia, for that year at least, had been decided by the battle of Aladja Dagh.

After this defeat of the Turkish field army, and the flight of Mukhtar Pasha towards the Soghanli Dagh, the iron band round Kars was so tightly drawn, that no living being could go out or in without being challenged and stopped. Every day Turks and Armenians, trying to break the blockade, were arrested, and a heavy artillery fire kept up day and night from the batteries at Metschka and Maghardjik. All this convinced the Turks that the great blow was impending, and that the Russians meant to attack Kars in all earnest; and when, on November 5th, the Russian army marched from Karajal to Vezinkoi, Hussein

T—*Second Battle of Aladja Dagh, October* 15, 1877.

Hami Pasha, the commandant, made a sortie with ten battalions, but was repulsed with such vigour, that the Russians for a few minutes actually penetrated into Fort Hafiz Pasha. The siege batteries were then brought closer to bear upon the eastern and southern faces of Kars and the girdle of forts around, and the cannonade renewed with increased energy, and preparations made for the assault, which was fixed for November 13th.

Now Kars, which had become so celebrated from the stubborn defence in 1855, though strong enough to task any army, was not so strong as it was during the Crimean war; for after its capture by the Russians, many of the works had been dismantled.

The Mukliss works in the north had not been completed, and were, besides, so constructed that they did not sweep the whole of the declivity, nor command the paths that led across the river to the Arab Tabia. There was no ditch protecting it, as there ought to have been according to the plan, nor had the works been constructed which were projected for the highest point of the range—about 200 mètres off—which commands the Mukliss.

South of the Mukliss lay the Ingliz work. It was a closed work, with one issue from its base on the south-east towards the town. It mounted no cannon, and was only adapted for small-arms fire, but was protected by a trench 7½ feet deep.

Veli Pasha Tabia consisted of three bastioned faces, closed up in the throat by a crenelated wall and defence barracks, and surrounded by a trench 7½ feet deep; the parapet had a height of nearly 30 feet. There were two entrances to it—one through the barracks, another into the trench. It had no powder magazine.

The Tschim was simply a battery, without any trench, but protected by a glacis 75 yards in front. It contained a powder magazine of a capacity of 50 cubic mètres.

West of the Tschim—1,200 mètres distant—lay the Takmash—better known to English readers by the name of Tahmasp. The ascent to this work was graduated, and comparatively easy—a sort of mamelon. It consisted of two closed and connected bastions containing barracks and a powder magazine.

Tich Tepesi—500 mètres north-west of this work—was a closed bastion containing a powder magazine, and provided with a trench and a battery in front 25 mètres distant, called the Ai Tabia. It mounted eight 24-pounders. The breastworks and batteries, Laz Tepesi, commanding the hamlet of Massad, completed the line of fortifications west of the river Kars-Tchai.

East of the river, the defences commenced in the north with the celebrated Arab Tabia on the top of the Kara Dagh, which descends in one unbroken steep declivity towards the river, but by three distinct terraces towards the valley on the east. It consisted of a closed bastion with barracks, a small bomb-proof powder magazine, and an open work, the whole surrounded by a glacis adapted for cannon and rifle-fire. The earth had all to be brought up from the valley below, and there were no trenches or traverses protecting the ramparts. Lying higher than the Ingliz work on the other side of the river, it was an important support against any rear or flank attack upon it.

The Kara Dagh group consisted of two open works, the chief one nearly surrounding a plateau of solid rock 20 ft. high, on which the Siaret battery was constructed, commanding the whole group. The chief work contained two powder magazines, the outwork only one.

Hafiz Pasha Tabia was the strongest of all the works. It was closed, the wall only pierced by one gate towards the town. The whole was surrounded by a deep trench, contained a magazine, and was protected on the south-east by an open outwork called Echali.

The Chanly Tabia consisted of a closed lunette, and two advanced redoubts, protected by a deep rock-hewn trench and traverses. It contained a powder magazine.

Suvari, an open work, commanded the road leading from Erzeroum into the town. It contained a small magazine.—So much for the outworks. The citadel was built of brick, with two large and two small towers and a powder magazine. The wall surrounding the old town—no other exists—had no military significance whatever. The bomb-proof accommodation in Kars was limited to shelter for 3,000 men in the barracks. Only one of the provision magazines, holding four weeks' food, was bomb-proof; but there were five bomb-proof powder magazines, protected against vertical but not against direct fire.

The armament of the place consisted of 150 rifled 24-pounders, mostly muzzle-

loaders, and fifty-four smooth-bore guns of the same calibre. The garrison should amount to at least 23,000 men; but the number actually within the walls did not exceed 15,000, with eighteen field-pieces. Water did not exist in any of the outworks beyond what was contained in the cisterns within the closed works.

Now this description of the place shows sufficiently that Kars was not a town to be taken as soon as looked at, especially when the fact is considered that the rocky nature of the ground would make a regular siege with parallels and zigzags a work of months. This was especially the case with the key of the position—the heights of Kara Dagh, with the Arab Tabia and the Siaret battery within the Kara Dagh group, the earth for which had to be carried up from the valley below. The southern defences to Kars were consequently of smaller value: with the fall of Arab Tabia and Kara Dagh, Hazif Pasha in the south and Mukliss in the west would speedily become untenable.

When November 13th arrived, however, the weather had made the ground too slippery for the attack, which was then postponed to the night between November 17th and November 18th.

Referring to the foregoing account, the assault made by the Russians may be easily followed. The columns appointed for the attack silently took up their positions as darkness fell upon the plain. General Lazareff, commanding the right wing, placed himself before the Hafiz Pasha Tabia, situated on a steep valley height, and surrounded by a deep ditch. Count Grabbe, commanding the centre, took up his position in front of the Chanly Tabia, a closed lunette, with two advanced redoubts, also protected by a deep trench. Generals Roop and Komaroff, commanding the left, took their places between the Erzeroum road and the river in front of the Suvari Tabia, the open work commanding the Erzeroum road.

The leading idea in this disposition of the troops was to carry the town and citadel from the south and east, and, by obtaining possession of Hafiz Tabia, to sweep the rocky heights of the Kara Dagh, and allow the storming party to scale them. The attack being carried out by night would prevent the artillery fire from Takmash Tabia and the Tschim battery from flanking the attack on Suvari.—Count Grabbe commenced the attack in the centre on the Chanly Tabia, and fell dead, pierced by a bullet in the forehead, whilst storming the works, which were, however, successfully scaled, in spite of the ladders being a little too short. At the same time, Suvari was taken with a rush, the men pressing onward through the town, driving the Turks before them along the narrow tortuous streets, and carried the brick-built citadel and its four towers, the attention of Takmash, Veli Pasha, and Tich Tepesi Tabias being engaged by smaller parties from the investing lines on the west. Chanly Tabia and Suvari having thus been taken, a portion of the centre was able to co-operate with the right in the assault on Hafiz Pasha Tabia, which fell towards morning, and enabled the men to scale the heights of Kara Dagh, which were only protected by the guns of Hafiz Pasha, and assail the Kara Dagh Fort in the rear, and force the gates that closed it towards the town. With the chief fort, naturally the outlying works also fell, with their open bases towards the guns turned upon them by the Russians, and at the same time upon Arab Tabia, which the Kara Dagh also commanded. The resistance at Arab Tabia, however, was stubborn; but in the morning it was overcome, and the guns played upon the Mukliss and Veli Pasha Tabias, which were consequently also rendered untenable, Takmash Tabia resisting to the last. Harassed thus on all sides in the darkness of night, with not half the men necessary to man the works—to say nothing of reserves—it is not surprising that Hami Pasha, the commandant, was bewildered, or, even were he not bewildered, was powerless to resist the determined onslaughts all along the line. And when the dawn appeared, and he found Chanly, Hafiz Pasha, and Suvari, with the citadel, in the hands of the Russians, the want of traverses and lines of communication would have prevented his concentrating his forces upon any one point even if he had had the men to concentrate. The best he could do was to defend Veli Pasha and Takmash as long as possible, to secure the retreat of his forces westwards. This he did, and the troops succeeded in escaping from the town, but only to be intercepted and overtaken by the enemy's cavalry, and brought back prisoners to the scene of their defeat, where they were set to work to accomplish, under Russian taskmasters, what their own leaders omitted to do—converting the various works, strengthening them, digging ditches,

erecting breastworks, and carrying out all the various measures which the Russians determined to adopt to secure them the possession of Kars for ever—or as long as "for ever" in such matters usually is. The fall of Kars was thus accomplished in one single night; and naturally there were the usual tales of corruption by Russian gold.

Yet the whole proceeding was remarkably simple and easy of unbiassed understanding. It was the very A B C of war; insufficiently manned forts, a dark night, and a simultaneous assault without any premonitory warnings in the shape of a preliminary cannonade to clear the way—a proceeding, by the way, that never accomplishes its object, if the enemy is at all trained to stand artillery fire. The key to the whole mystery—if a matter of course can be called a mystery—lay, firstly, in the fact, that the outworks and forts were not connected, and for the most part not furnished with ditches, whilst the parapets were ill-constructed. Secondly, that the great length of the fire-line—nearly 8,000 yards—required at least a garrison of 24,000 men for its adequate defence; and as the number of troops in Kars, after the defeat of Mukhtar Pasha at Vezinkoi, was barely 15,000 men effective for service, it was abundantly evident that the place could not hold out long against the forces brought up by the Russians, although the latter included the able-bodied men of Kars in the estimate of their prisoners.

Undermanned in this way—and that, too, by at least partially demoralised troops—without water, without traverses, the works cut in two by the Kars-Tchai, what wonder that a previously well-concerted plan, minutely settled in all its details, should succeed, when carried out at night by troops yet flushed with their recent victory? The wonder is that the Turks withstood the assault for so long, and held out for twelve hours against the incessant attacks of the Russians, suffering a loss themselves of about 5,000, and inflicting a loss on their enemies of nearly 3,000, according to their own accounts. The disproportion in the number killed on either side is noteworthy. Had it been reversed, it would have been explicable. As it was, the only conclusion that can be drawn is, that the Russians gave but little or no quarter that night. Nor can they much be blamed for it. Night attacks are curious affairs, and the men generally like to "*mak'sicker*," for there is no knowing what might not be gathering together in front, or on either flank, under the cover of night.

CHAPTER XXII.

PLEVNA AND SCHIPKA.

THE defeat of the Russians before Plevna for the second time, and the consequent disarrangement of the Russian plans, would, in the face of any other enemy than the Turks, and under better transport arrangements, almost certainly have resulted in ending the campaign, at least for the year. This opinion was freely expressed in the most competent military circles; and it is even said that Count Moltke, on being asked by the emperor what his opinion of the situation was, replied that the position of the Russians, judged with a full allowance for the incapacity of the Turks, was highly critical, and that if the Turks were at once to assume a vigorous offensive and make judicious use of their opportunities, the Czar would have to retreat. This was evident to any one; and even the Seraskeriat was convinced that a vigorous offensive would suffice to crush the Russian armies.

Unfortunately for the Turks, their idea of a vigorous offensive consisted in hard fighting and brute force. Capable enough of striking hard and furiously for the moment, they appeared unable to take the preparatory steps, and assist, by vigorous strategy and tactics, the blows which their men were able and ready to deal on the battle-field itself. Thus they were glad to listen to Suleiman Pasha, whose successful march through Montenegro had excited their admiration, and they quite believed his assurances that he would be able to force the Schipka Pass, the key-stone of the Russian arch resting upon the Danube;

and that then it would be easy for Osman Pasha and Mehemed Ali Pasha to crush in the two sides.

Henceforth, till the end of the campaign, this idea dominated the authorities at Stamboul; and all exertions, all supplies, all reinforcements, were devoted to Suleiman Pasha.

But to insure the success of this plan, the co-operation of Osman Pasha and Mehemed Ali, by joining in the attack on the two Russian flanks, with an equally vigourous offensive, was an imperative necessity. But it was hopeless to expect such unanimity of action on the part of the Turks. Vanity, contempt for their enemy, want of mobility, and want of concert between the three commanders, prevented it. The commanders were not thoroughly independent, but had to refer to Constantinople for orders, and for the sanction of their plans before they could act. Not only was time lost by this roundabout method of intercommunication, but the execution of their proposals was either delayed by the consultations held at the Seraskeriat till it was too late, or the proposals themselves were so modified and tinkered, that nothing or little was left of the originals.

Meanwhile the Russians, fully aware of their critical position, lost no time in filling up the gaps which had been cut in their ranks. Nothing was more significant of the fears entertained by the Russian staff, than the retreat of the Grand Duke Nicholas from Tirnova to Biela; and subsequently, on August 13th, to Gorni Studen, where he was soon afterwards joined by the emperor himself. The inhabitants of Tirnova, as may be imagined, were terrified at this retrograde step of their liberators, and momentarily expected to see the Turkish host of Bashi-Bazouks and Circassians, regulars and irregulars, sweep, like an avalanche, down the mountain slopes, and crimson the Yantra with Bulgarian blood.

But, beyond pushing forward a cloud of irregulars to Selvi, Osman Pasha did nothing. There was, of course, a good reason for Osman Pasha not to advance. In the rear of his left flank, and immediately on his left flank, there were considerable forces. At Nicopoli there were Russians and Roumanians combined; and at Korabia and Kalafat there were also strong divisions of Roumanians, ready and free to cross the Danube at any spot between Widdin and Nicopoli. In addition, there were the Servians in his rear, who, although nominally at peace with the Porte, were ready to obey the orders of the Czar at any moment, and cross the frontier to his assistance. Had Osman Pasha thus moved forward, there is no doubt but that in a short time there would have been a formidable army in his rear, ready to fall upon Plevna the moment he left it, and to co-operate with the Russian forces confronting him.

But, in spite of this, the Turks ought to have been in a position to deal a decisive blow before Roumanians and Servians could get ready to carry out the above-mentioned movements. Three or four days of a rapid simultaneous offensive have often decided a campaign. In fact, every campaign is thus decided at one moment or the other; and, missing this one grand opportunity, the Turks never had another equal to it.

But though, for many reasons, the Czar did not wish to avail himself of Servian or Roumanian assistance till the very last moment, the critical position his armies were in obliged him to waive all such considerations, at least in the case of the Roumanians. Whilst calling up the two corps stationed between Odessa and the Crimea to the Danube, mobilising the guards, the grenadier corps, and calling out 185,467 of the reserves and militia, he also issued decrees for the levy of 206,000 recruits; and at the same time concluded a convention with Roumania, after much negotiation as to the precise position to be occupied by the Roumanian army and Prince Charles, who insisted that he should retain the command of his forces. For some time no result was obtained, as the Russian staff objected to an independent factor in their arrangements; but, at last, a compromise was arrived at, whereby Prince Charles was invested with the command-in-chief of the Russo-Roumanian army before Plevna; whilst General Zatoff was appointed chief of his staff.

Meantime, whilst these arrangements were being carried out, the campaign assumed a different character. From taking the offensive, the Russians had to hold themselves on the defensive, and concentrated all their efforts on the fortification of their positions before Plevna and at the Schipka Pass. At the same time, it was clear that it was absolutely necessary to cut off Osman Pasha from his line of communications with Widdin and Sophia. For the former purpose the Roumanian troops were

to be employed, whilst General Gourko and his cavalry were to accomplish the latter.

But before either of these steps could be effectually carried out, it was necessary to take Lovatz, which blocked the way to the high-road from Plevna to Sophia. With this object a preliminary *reconnaissance* was executed by General Skobeloff.

Leaving the grand duke's head-quarters, he took five battalions of infantry, his own brigade of cavalry, and two batteries of horse artillery, and came out on the Selvi road, half-way between Selvi and Lovatz. His right wing, composed entirely of cavalry, advanced and occupied several villages encircling Lovatz, from the Plevna road to the Selvi road. He then advanced his artillery on the Selvi road to the heights a mile distant from Lovatz, overlooking the town, opened fire with sixteen pieces of artillery, and pushed forward his infantry.

It was evident, however, from the moment the heights were reached, that the *reconnaissance* could not be turned into an attack. From 15,000 to 20,000 troops camped in and about the town, while the low hills immediately surrounding the town were strongly intrenched. There was a strong redoubt on a low hill overlooking the Plevna road, while a high, steep hill on the Selvi side was covered with trenches. There were also twelve guns in position, and a considerable number in reserve. All this was apparent to General Skobeloff, who, nevertheless, resolved to feel the enemy, and the hills soon resounded with the roar of artillery and the noise of shells. The Turks replied at once, and, for a time, there was a lively artillery fire. The Turkish artillery practice was very fair; several shells fell near the Russian guns; but, as the ground was very soft—the battery being planted in a vineyard—they rarely exploded, and when they did explode they only threw up the earth a little, doing no harm beyond killing one man.

The same was the case on the right flank, where the cavalry advanced within point-blank range of the Turkish guns, and opened fire with two small pieces of horse artillery. The Turks replied, and shells fell continually among the horses and men of the battery without doing any harm, owing to their not exploding until too deep in the ground. There was a panic on the Turkish skirmishing line at first; but they soon perceived they had only cavalry to deal with, and were not long in recovering their positions. But they did not attack, nevertheless; whilst, on the other hand, General Skobeloff pushed forward his infantry. From where his guns were placed the road led down a narrow hollow, whose sides were covered with woods, down to the foot of the steep hill which was occupied by the Turks in intrenchments. The infantry went down partly under cover of the woods, but not unperceived by the Turks, who poured a heavy fire into the woods. The Russians pushed forward, however, and in much less time than could have been thought possible, had reached the foot of the hill. They announced their arrival with a shout, and began to dodge up the hill two or three at a time, under cover of the bushes and little hollows with which such hills are usually covered, till the *reconnaissance* began to look like a real attack. The Turkish fire grew heavier and heavier, until it was one continuous roll, far more terrible than the heaviest artillery fire, because a hundred times more destructive.

It was evident, from this fire, that the Turks were three times as numerous as the Russians. An assault under such circumstances would have been madness; and when Skobeloff began to perceive that the attack was growing far too serious, in spite of his orders, he went forward to stop it. The soldiers were, however, determined on an assault, and the officers maintained, when reproached by Skobeloff, that they could not restrain them. Skobeloff himself, whilst stopping to give an order, had his white horse shot under him; and his escort, which had been composed of six Cossacks, was reduced to three, the others having been more or less seriously wounded—one mortally.

The fire was still raging along the Turkish intrenchments, and the Russians were still pushing forward. Skobeloff, mounting another horse—a sorrel this time—again galloped forward. He reached the foot of the hill shouting and gesticulating, while his trumpeter sounded the retreat, at last with effect, for the skirmishers began to withdraw. Then he went down again, horse and man together, fairly under the Turkish intrenchments, and within easy range of the Turkish fire, which was growing stronger and stronger. They were getting reinforcements from the other side, where they were only threatened with cavalry. The roar was continuous, and rolled up and down the hollow like one continuous crash of thunder, only broken by

the heavier booming of the artillery. The bullets fell about Skobeloff like hail, but in a few minutes he was up again on another horse, fresh as ever, coming back up the road at a trot. He had not received a scratch. The *reconnaissance* was over. The troops retired as they came, through the wood under the Turkish fire, which was not very effective, for the whole loss of the Russians was only five killed and twenty wounded on this side.

The *reconnaissance*, however, had succeeded in showing that Lovatz would have to be seriously dealt with, and was not to be carried during a cavalry raid, or by a *coup de main* with small forces. For the moment, therefore, action in this direction was limited to an expedition of the 4th corps, under General Gourko, for the purpose of stopping the communications with Sophia across the Balkans, by way of the Orkhanieh Pass (see sketch X, p. 268), preliminary to the complete investment of Plevna, and its ultimate conversion into a Sedan for the Turks.

Meantime, whilst the Russians were strengthening themselves and their positions with reinforcements and intrenchments, the Turks began to exhibit considerable activity.

On the 16th of August there was a general *reconnaissance*, in some force, by the Turks all along the Russian left flank. From the Danube to beyond the Balkans, from under the guns of Rustzuk, from Rasgrad, from Osman Bazar towards Bebrova, and at half-a-dozen intermediate places, the soldiers of Mehemed Ali Pasha beat up the Russian positions confronting them. There was not much hard fighting, and little loss on either side; but the significance of the business was, that the Turks took the initiative. On the same day, a column of Suleiman Pasha's force attempted strenuously to force the Hainkoi Pass, and a Turkish column did, indeed, force its way into the defile, but was there so roughly handled by the Russian artillery in position and by a regiment of the 9th division holding the Pass, that it was compelled to retire. A day or two later, a Turkish division made a threatening demonstration from Grivitza, the redoubt in front of Plevna. The Turks by no means rested after this work, and continued to display a modified activity. They struck out from Rustzuk; and the same day there was fighting, although not serious, before Osman Bazar, whilst there was an artillery skirmish in front of Skobeloff's position, near Lovatz, where the Turks began the ball; and the Cossacks under Skobeloff's command were harassed, day and night, by forepost work. Meantime, the 2nd division, having crossed the Danube, was massed there preparatory to marching in the Plevna direction. Suleiman Pasha was threatening to attack the Schipka Pass with forty battalions. The defenders of the pass consisted of but twenty companies under General Stoletoff, consisting of the relics of the Bulgarian legion, and three battalions of the 9th Russian division. The 2nd division had, therefore, been diverted from its intended destination, and was being marched on Selvi to relieve a brigade of the 9th division ordered to the Schipka. On the Plevna front, few reinforcements had reached the Russian troops holding it. Compared with before the battle, there was but the addition of the Roumanians and the 16th division: but on August 22nd, eight thousand reserves crossed the Danube to fill up the gaps made by the war in the ranks of the 9th corps, which restored that corps to its full strength. On the other hand, Schahofskoy marched his brigade of the 32nd infantry division back to his original position at Kosarevac, confronting Osman Bazar, and was thus relieved from continuing the work he found so hard. Thus, on the Plevna front, the Russians were to have two full army corps, the 4th and 9th; two Roumanian divisions of infantry, and the 11th cavalry division; Skobeloff's detachment, consisting of a brigade of Circassian Cossacks, with some infantry and artillery watching Lovatz; there was also the 9th cavalry division: the whole Russo-Roumanian force confronting Plevna, thus amounting to from 65,000 to 70,000 men. In this estimate was not included the 4th cavalry division, whose line of detached operation was toward the road through the Balkans from Sophia.

But whilst these preparations for the capture of Plevna were going on, interest became centred in the Schipka Pass, which Suleiman Pasha was preparing to attack. The people of Tirnova naturally did not feel comfortable under these circumstances. The grand duke had ridden into Tirnova amid the plaudits and the glad weeping of a population beside themselves with joy. Flowers were showered down from the windows, and strewed his path; priests and girls struggled for the honour

of kissing his hand. To be with the Russians in Tirnova, then, was to be a welcome guest, for every door stood open. The strains of triumphal music swept along the quaint narrow streets; and the precipices, amid which the town hangs, rather than is built, sent back a melodious echo. But after that came the retreat, and strong was the contrast. The road up the steep into the town was blocked by a double row of vehicles, one driven by weary and somewhat irritable Russian soldiers, the other by sullen Bulgarians, who had found out with great alacrity that they had rights since the Russians came, and were not only no longer subservient, but even, in a tentative way, inclined to be uncivil if they could but harden their nerves. The place was never clean, but it had become fouler than ever. Above the entrance stood, gaunt and ugly, the skeleton of a triumphal arch with just the last shred of decoration, looking like the gallows mourning the abolition of capital punishment. The narrow street was a disheartening chaos of vehicles, whose horses scrambled over the filthy stones; of miserable fugitives squatting listlessly wherever they could find a corner, or trying to push through with their donkeys laden with clothes and children; of Bulgarian civilians, foolishly drunk and reeling about over the stones, amid the jeers of the Russian soldiers; of limp Bulgarian lads in uniform, of whom the Russians persisted in trying to make soldiers—a service for which they lacked alike heart and stamina; of time-worn men of the original Bulgarian Legion, who, having come somehow out of the pandemonium of Eski Zagra with uncut throats, had drifted back demoralised and disgusted; of German-Jew chapmen, selling everything, from bad champagne to rubbishing boots; of marketenders seeking shops whereat to replenish their waggons; and of Bulgarian priests walking about in long petticoats.

Nor was the alarm at Tirnova unfounded. On the 19th of August, Suleiman Pasha, after having made himself master of the whole valley of the Tundja, had already occupied the village of Schipka after a continued struggle against the advance positions of the Russians, till they had fallen back on the head of the pass. The Schipka Pass is not a pass at all in the usual sense of the term. There is no gorge, no defile; there is no spot where 300 men could make a new Thermopylæ; no deep-scored trench as in the Khyber Pass, where an army might be annihilated without ever coming to close quarters. It has its name simply because at this point there happens to be a section of the Balkans of less than the average height, the surface of which, from the Yantra valley on the north, to the Tundja valley on the south, is sufficiently continuous, although having an extremely broken and serrated contour, to afford a foothold for a practicable track, for the Balkans generally present a wild jumble of mountain and glen, neither having any continuity. Under such circumstances, such a crossing-place as the Schipka Pass afforded was a godsend, although, under other circumstances, a road over it would be regarded as impossible. What was a mere track was made by the Russian pioneers into a really good and practicable, although steep, high-road. The ground on either side of the ridge is depressed sometimes into shallow hollows, sometimes into cavernous gorges; but these lateral depressions are broken, and have no continuity, otherwise they would clearly afford a better track for a road than the high ground above.

The highest peak is flanked on either side, behind the lateral depressions, by a mountainous spur higher than itself, and, therefore, commanding it, and having as well the command of the ridge behind, as is shown in sketch U. The higher one—that is to say, the western of these two spurs, marked A in the sketch—raked the road leading up to the Russian positions. These spurs break off abruptly and precipitously on their northern edge, and therefore afforded no access into the valley north of the Balkans. Their sole use to the Turks, therefore, was in affording positions whence to flank the central Schipka ridge, along which ran the road from Gabrova to Schipka. It was possible also for troops to descend from them, struggle through the intervening glens, and climbing the steep slopes of the Schipka ridge, give the hand to each other on the road which runs along its backbone to its summit, where the Russians had constructed a fort, to which they gave the name of Fort St. Nicholas. This done, the Schipka position would, of course, be turned, but the advantage would be of little avail till the road had been opened by carrying the fortified positions on it. Without the command of the road, an enemy might indeed send bands down

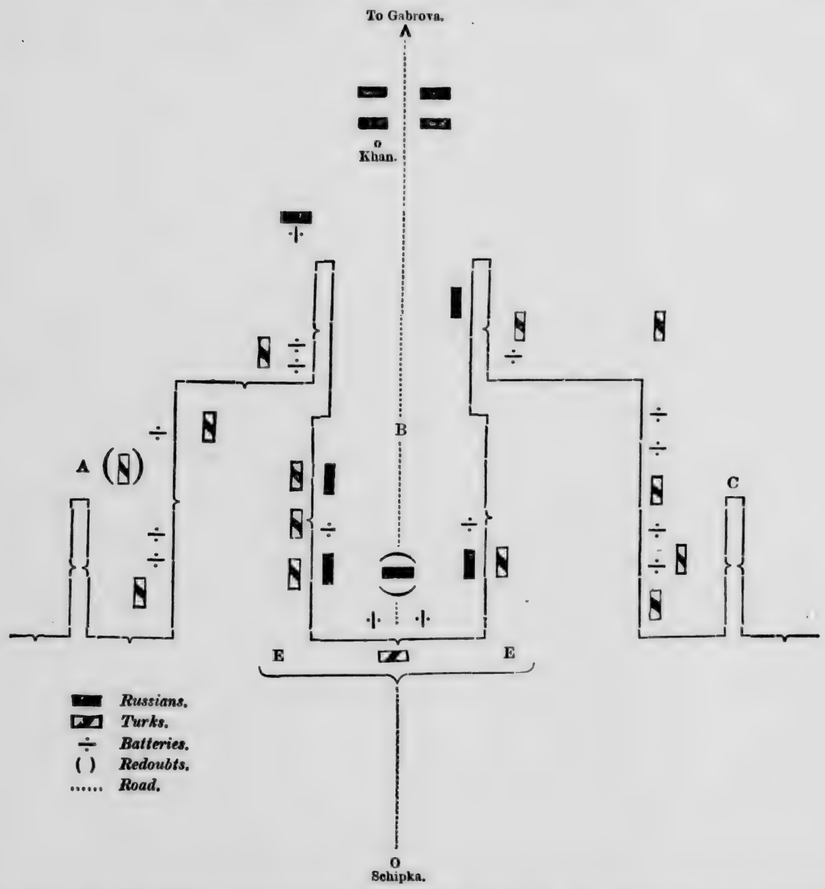
the road on to which he had scrambled, into the lower country about Gabrova, to burn and plunder; but unless he carried the whole of the road, his communications with the Balkans would not be secured.

Much has been said of the strength of the Schipka position; but unless strongly held with wide extending arms of defence, it was easy to be attacked, and very difficult to be held with any security. The strength of a position does not depend wholly on its elevation, or even on the difficulties of access to a direct attack, but on the clear range around it which its fire can sweep, and its ability to concentrate its fire on critical points. Herein lay the defect of the Schipka as a defensive position. It could not search with its fire the jumble of lateral valleys and reverse slopes which hemmed it in. A brigade of light infantry might have massed in a hollow within 100 yards of the Russian first position, without exposing itself to the artillery fire of that position.

Such being the positions, the Turks began the attack on the 21st, pushing on directly up the steeps above the village of Schipka. The Russian garrison in the works of the pass then consisted of the Bulgarian legion and one regiment of the 9th division, both weakened by previous hard fighting, and reckoning little more than three thousand bayonets, with about forty cannon. No supports were nearer than Tirnova, a distance of forty miles—a grave omission. The garrison fought hard, and hindered the Turks from gaining any material advantage beyond forcing the outer line of the Russian shelter-trenches on the slopes below the position of Mount St. Nicholas, the highest peak of the Schipka crossing, and marked E E in the sketch. The Russians had laid mines in front of their trenches, which were exploded just as the head of the Turkish assaulting parties were massed above them, and a large number of Moslems were blown up into the air in fragments. The loss to the Russians on the first day's attack was but 200, chiefly of the Bulgarian legion. On the second day, the 22nd, the fighting was not heavy, the Turks being engaged in making a wide turning movement on the right and left flanks of the Russian position, and these attacks were next day developed with great fierceness and pertinacity.

On this day, August 23rd, the Turks assailed the Russian position on the front and flanks, and drove in the defenders from their outlying ground. The radical defects of the position became painfully apparent—its narrowness, its exposure, its liability to be outflanked and isolated. Fortunately for the Russians, reinforcements had arrived, which averted the mischief which had otherwise imminently impended. Stoletoff hit his hardest; but after four long days of intense mental and physical strain, he could not perform impossibilities with 30,000 men thundering on his front and flanks. But there had come to him, swiftly marching from Selvi, a brigade of the 9th division, commanded by General Derozinski, and this timely succour had been of material value to Stoletoff. The fight lasted all day; and at length, as the sun grew lower, the Turks had so worked round on both the Russian flanks, that it seemed as though the claws of the crab were about momentarily to close behind the Russians, and that the Turkish columns climbing either face of the Russian ridge, would give a hand to each other on the road in the rear of the Russian position, as shown in sketch U.

The position was critical in the extreme; but the two Russian generals, General Stoletoff and General Derozinski, expecting momentarily to be environed, had sent, between the closing claws of the crab, a last telegram to the Czar, telling what they expected, how they had tried to prevent it, and how that, please God, driven into their positions and beset, they would hold these till reinforcements should arrive. At all events, they and their men would hold their ground to the last drop of their blood.



At six o'clock there was a lull in the fighting, of which the Russians could take no advantage, since the reserves were all engaged. The grimed, sun-blistered men were beaten out with heat, fatigue, hunger, and thirst. There had been no cooking for three days, and there was no water within the Russian lines. The poor fellows lay panting on the bare ridge, reckless that it was swept by the Turkish rifle-fire. Others doggedly fought on down among the rocks, forced to give ground, but doing so grimly and sourly, whilst the cliffs and valleys sent back the triumphant Turkish shouts of "Allah il Allah!"

At this time two Russian generals were on the peak which the first position half encloses. Their glasses anxiously scanned the visible glimpses of the steep brown road leading up there from the Yantra valley, through thick copses of sombre green, and yet more sombre dark rock. Suddenly the

head of a long black column was plainly visible, like a long serpent coiling up the brown road. Through the green copses a glint of sunshine flashed and danced on the glittering bayonets, and such a gust of Russian cheers whirled and eddied among the mountain tops, that the Turkish warcries were wholly drowned in the glad welcome which the Russian soldiers sent to the comrades coming to help them. Gradually the head of the column drew near the little plateau in front of the khan, where they at once brought a mountain battery into action against the Turkish artillery on a wooded ridge, by the occupation of which the Turks were flanking the right of the Russian position. At the same time a column of Russian infantry advanced with a swift tramp up-hill till they got within firing distance of the Turks on the right.

They were a battalion of the rifle brigade, hurried up on Cossack ponies: the brigade itself was not three kilometres behind. They were led to the attack by General Radetzki himself, who thus saved the day, and then left the attack to develop itself. It was the same rifle brigade which followed General Gourko in his victorious advance and chequered retreat. The brigade had marched fifty-five kilometres straight on

U—*The Positions in the Schipka at* 7 P.M., *August* 23.

end without cooking or sleeping, and now was in action without so much as a breathing halt. Such is the stuff of which thorough good soldiers are made. Their general, the gallant Radetzki, accompanied them, and pushed an attack on the enemy's position on that wooded ridge on the Russian right. But Radetzki, who himself marched on up the road with his staff at his back, ran the gauntlet of the Turkish rifle-fire, and joined the other two generals on the peak, hard by the batteries of the first position. As senior and highest officer present, he at once took command, complimenting General Stoletoff, whom he relieved, on the excellence of his dispositions and stubbornness of defence.

In the night there was a renewed attempt to carry the Turkish positions threatening the right flank, for it was felt that there was no safety, far less elbow-room, for the Russians until the Turks should be driven off the dominating wooded ridge looming so ugly on the right flank. The left flank, which the Turks assailed the previous day, was comparatively safe.—The next day, August 24th, the fighting began at daybreak with a renewed attack of the Russians on the position threatening their right. The Bulgarian peasant boys displayed singular gallantry in the same work as that in which the despised Indian bheestie has so often done good service to our soldiers, by going down into the actual battle, right into the first line, with stone crocks full of water for the fighting-men. This water was fetched from far in the rear, along a bullet-swept road—for there was no water in the position itself. One lad, who had had his crock smashed by a bullet, wept, not for joy at his fortunate escape, but for sorrow at the loss of the article which enabled him to be of service.

The fighting hung very much in the valley, and the reinforcements of the 9th division, sent down, effected not much perceptible good. About nine Dragomiroff arrived with two regiments of the 2nd brigade of his own division. The Podolsk regiment he left in reserve near the khan; with the Jitomer regiment he marched up the road to the first position. There was no alternative but to traverse that fearfully-dangerous road, for the lower broken ground on its left was impracticable, and reported besides to be swarming with Bashi-Bazouks. The Jitomer men lost heavily while making this promenade, and having reached the peak, found no safe shelter, for the Turkish rifle-fire was coming from two quarters simultaneously. So the infantry were stowed away till wanted in the ditch of the redoubt. Radetzki and his staff remained on the slope of the peak, and here Dragomiroff joined, and was welcomed by his chief.

The firing in the valley waxed and waned fitfully as the morning wore on to near noon. The Turks were very strongly established in their wooded position, and there was an evident intention on their part to work round their left, and edge in across the narrowed throat of the valley, towards the Russian rear. About eleven the firing in the valley swelled in volume. It was almost wholly musketry fire. The Russians had their tirailleurs in among the trees of the Turkish slope, where the battle waged to and fro—now the Russians, now the Turks, gaining ground. Occasionally the Russians, at some point, would be hurled clean back out of the wood altogether, the Turks following them eagerly to its edge, and lying down while pouring out a galling fire. It seemed an even match; the Turks and Russians alike accepted valiantly the chances of battle. The Russian tirailleurs, finely-trained skirmishers, looked out dexterously for cover; and the Turks displayed fine skirmishing ability; but the soldiers of the Brianski line regiment were not so good at finding cover. There was clearly no thought among them of quailing, but they stood up in the open and took what came.

Round the peak, on the slope of which the generals and staff were surveying the scene, bullets were singing like a nest o angry wasps. One struck on the right knee General Dragomiroff, who had been standing calmly in the face of the fire, looking down upon the battle. One of the best generals in the Russian army was thus *hors de combat.*

Meanwhile the tirailleurs and Brianski regiment were not making headway in their difficult enterprise of attacking direct in front the steep Turkish slope, with its advantage of wooded cover, although they foiled the efforts of the Turks to work round by their own left into the Russian rear. The Russian staff could see, on the sky-line, the Turkish reinforcements as they came up out of the valley by the road close to their mountain battery, on the bare spot near the edge of their left flank. It was determined, at twelve o'clock, to deliver a

counter flank attack on the right edge of the Turkish ridge, simultaneously with a renewed strenuous attack of the tirailleurs and the Brianski men from below. The two battalions of the Jitomer regiment, each leaving one company behind as supports, emerged from the partial shelter of the peak of the Russian first position, and marched in company columns across the more level grass land at the head of the intervening valley. They had no great dip to traverse, and their way was good marching ground; but the Turkish mountain guns, from the battery high up on the wooded peak of the Turkish position, were ready for them, as also was the Turkish infantry on the Turkish right edge of the ridge. The fire swept through them, and many a gallant fellow dyed the grass with his blood. But the battalions pressed steadily on, and dashed into the wood at the double. The Russian artillery had done its best to prepare the way, for their battery on the peak had fired hard while they were crossing over, and a reserve battery near the khan down below had come into action. But soon the artillery had to cease, for there was danger in blind firing into the wood when the men were in it. The arbitrement had to be left to rifle and bayonet.

The crisis of the battle had arrived. The fighting of the infantry on the Turkish front and flank lasted for a long hour, and raged with great fury, but the Russians gradually gained ground. The Turks first withdrew their battery of mountain guns near their right flank. Then the left battery followed their example, for the tirailleurs and Brianskis were gaining the ridge on the Turkish left also. There remained but the central peak of the Turkish position. That carried, the ridge would be in the hands of the Russians, and their right flank set free from the dangerous pressure on it.

The fight was on the balance. The Russians, as they stood, could all but succeed, but not quite. It was an intensely critical period, but Radetzki was equal to the occasion. The Jitomer battalions had left two companies in reserve when they marched out from behind the peak. Radetzki himself took one of these companies; the colonel of the Jitomer regiment placed himself at the head of the other; and thus led, the two companies set forward to throw themselves into the fray.

Thus headed by their favourite leaders, the Jitomers, who had been chafing at their inaction, advanced rapidly, and ringing cheers rose high above the rattle of musketry as they dashed across the grassy slope at the head of the valley, and precipitated themselves into the wood.

Fortune, thus energetically wooed, yielded. There was a concentric rush on the peak. Its rude breastworks were surmounted; there was some hot bayonet-work, and in a short time they had reached within fifty yards of the redoubt. Here they found obstacles which, for the moment, were quite insurmountable. The Turks had cut down the trees around the redoubt, making an abattis over which the Russians found it almost impossible to pass. They gathered around the edge under cover of the trees, and suddenly made a rush for it, but were driven back with fearful loss. The soldiers became entangled in the masses of brushwood, trunks, and limbs of the trees over which they were obliged to scramble, while the Turks poured in a terrible fire upon them at this short distance, and mowed them down like grass. Of the first assault launched against the redoubt, very few got back under cover to tell the tale. It was very evident that the assault, under such conditions, could not succeed. Only one battalion had been sent to attack. The force was insufficient, and of this one company sent to the assault was nearly destroyed. Reinforcements were sent by Radetzki, who had returned to his position on the central peak. The attack began again, but dispositions were made to place a large force in such positions that it could pour a heavy fire into the redoubt to cover the assault until the assaulters were almost up to the parapet.

This attack seemed almost on the point of success, for the colonel in command said, that if reserves were given to him he could take it. The officer in command of the reserves let them go; but they were nevertheless repulsed. Then Radetzki mounted and rode to the ground, followed by part of his staff. The chief of the staff, General Dimitriofsky, on foot, bareheaded, and supported by two men, with an expression of extreme suffering on his face, had put himself at the head of a battalion to lead the assault. A shell had struck the ground beside him, covering him with earth, knocking him down, and rendering him senseless for a few minutes. The attack still went on. The fire became terrible. From among

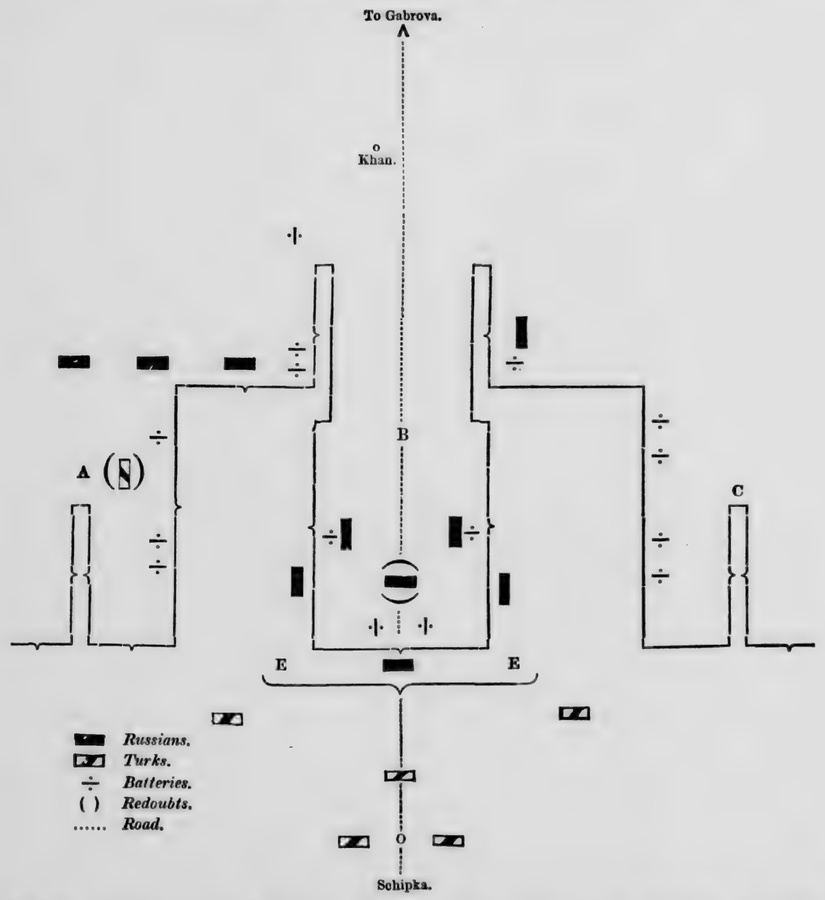
the trees rose a large column of smoke, marking the place of the Turkish redoubt, which was dimly seen through it, while the thick woods were full of the roll of the Russian musketry fire.

The Russians advanced steadily. They rushed over, or through, the abattis; they even got into the battery, and actually held it for a few seconds, but were driven out again. They surrounded the place on all sides, pouring into it a terrible fire, but were again driven back. In the meantime, the Turks, to support the defence, began to attack in front and rear. Musketry and artillery were heard coming up from Schipka, mingling with the nearer din around the redoubt in a most sinister way. The wounded came trooping steadily back, with wounds in their heads, arms, and bodies. Some were on litters. One was carried by his companions. Some were limping along by themselves, presenting a most pitiable spectacle, covered with dust, smoke-begrimed, haggard, wretched. The fight continued until late at night, the wounded coming back steadily all the time, till it was seen that the capture of the redoubt could not be effected that day.

Still, though the redoubt remained in the hands of the Turks, the ridge and slopes on the Russian right had been cleared, and it was no longer death to ride along the road from Gabrova to St. Nicholas. The conflict was continued during the following two days, the reinforcements which the Russians had received enabling them to strengthen the grip they had acquired by the timely arrival of General Radetzki.

The redoubt and ridge on the Russian right was abandoned during the night by both combatants, on account of want of water, there being none on the Russian side; and the road to it on the Turkish side having been threatened by the Russian advance, and reoccupation of the trenches on the southern and western slopes of the peak on which stood Fort Nicholas. On the 26th the Turks returned; but finding the way effectually barred towards the Gabrova road, they again, and for good, abandoned the position which had been so hotly contested. On August 27th the positions were as shown in sketch V. By that day solitude reigned amongst the woods to the right of Fort St. Nicholas and the Gabrova road, where, for days, such furious fighting had raged. The Russian soldiers at last could walk along the road, from the khan in the rear of Radetzki's position, right along to the final peak of the Balkans on Mount St. Nicholas, and thence down into the shelter-trenches, without once hearing the whistle of a bullet, where once the air vibrated with the hum of them.

Suleiman Pasha had had enough for the time of the Schipka Pass. For five days he beat out the brains of his gallant stubborn soldiers against its defences and its defenders, repeating, on a smaller scale, exactly the same errors he knew the Russians had been committing at Plevna during their first assaults on that place, in the face of superior weapons, superior men and defences. Terribly had the Turks struggled; but their valour had proved unavailing, and 5,000 Turkish corpses festered in the blazing sunshine between the Schipka village and the fringes of Mount St. Nicholas. All Suleiman Pasha's Montenegrin soldiers had been removed; and there remained, confronting the Russians, only a few battalions of Egyptians, with some cannon on the heights, and a few more miscellaneous battalions in Schipka.



The Russian losses were also very heavy, amounting to over 4,000 killed and wounded. They had, however, just managed to save themselves from the danger threatening them, whilst the Turks had gained nothing at all.

It is a strange feature of this war that the commanders all struck isolated blows. Scarcely had Suleiman Pasha been repulsed, when Mehemed Ali commenced an attack all along his line confronting the Russian left. From August 28th to August 30th he made a general advance, and there was continuous fighting along the front of the centre and right flank army of the Czarevitch from Nisova on the White Lom southward over Solenik, Gagovo, Sultankoi, Popkoi, Mehemedkoi, and beyond, in front of Osman Bazar. Here Mehemed Ali Pasha was personally in command. Great masses of Turks everywhere drove in the Russian forepost line, and at several moments it seemed as if an important battle was imminent; but the tactics of the Turks resembled those of the combatants in the American civil war. When they gained any ground they sat and fortified themselves in it by intrenchments before moving to acquire any more. On the other hand, the Russians abandoned the Popkoi position also after having intrenched themselves in it. The reason was stated to be the discovery of its ineligibility as being commanded by higher

ground within cannon range, whilst the new position was behind the old one. Here the combatants remained looking at each other, whilst there came a *parlementaire* from Mehemed Ali Pasha on the subject of the treatment of the wounded and the Bulgarian civil population. He was singularly incoherent as to the objects of his mission, had escort myself when I must pass through their camp."

With this the attempts of Mehemed Ali to break through the Russian left came to an end, and Osman Pasha then took up the ball, and directed a serious and well-sustained attack against the Russian left centre, almost directly in front of Poradim.

V—*The Positions in the Schipka, August* 27.

no definite proposals to make, and there were suspicions that, in reality, he was a spy. On some subjects he was charmingly frank. Speaking to him of the Bashi-Bazouks, the grand duke called them "wild beasts." "Oh," said the envoy, "I am not expected to defend them. I always take an

At six o'clock in the morning of August 31st, a large force of Turkish cavalry advanced beyond the Turkish foreposts between Radisevo and Grivitza, and drove in the Russian advanced posts on the line between the villages of Pelisat and Sgalince. This done, at eight o'clock the Turkish

leader developed a regular attack in force in a direction already prepared by his cavalry. The Turkish infantry engaged were estimated by the Russians at 25,000 men, with more than a proportionate quantity of artillery. The Russian force engaged consisted of three regiments of the 16th division, which was not engaged in the previous Plevna battle, and two battalions of the 30th division in reserve, which division took part in the battle of the 30th of July. The Uhlans and Hussars of the 4th cavalry division arrived in time to be of some service.

The Turkish attack was in some degree a surprise. General Zatoff was away from Poradim, making a formal visit to Prince Charles, and in his absence nobody was in a position to make comprehensive dispositions; but he returned in time to take the direction of affairs before the fighting was over. It was stubborn, and in places desperate. The chief struggle took place between Pelisat and Sgalince.

In front of, and beyond Pelisat, the ground rose in a lazy incline for a distance of a mile, and on this ground stood a Russian redoubt. A mile and a-half to the right was the village of Sgalince, the Russian centre, before which was another redoubt, and a series of trenches. Forward towards Plevna the ground still rose higher, so that the Russian positions were commanded by the positions taken by the Turks in their forward movement. The disadvantage could not be avoided by the Russians without falling back several miles. The Russian redoubt, a mile in front of Pelisat, was taken by the Turks early in the fight, and the Russian left wing driven back on Pelisat, in front of which trenches had been dug and lined with troops.

Within an hour the Pelisat redoubt was taken by the Turks, retaken by the Russians, and retaken again by the Turks, who, encouraged by their success, then went straight at the Russian trenches before Sgalince.

The battle here was terrible, but the Turks were repulsed, and again they retreated up the hill. It will hardly be believed that they went at it again; and yet they did so. To those who had watched the two preceding assaults it seemed madness, because the Russian fire never slackened an instant, and the Russian line never wavered, while the Russian reserves, which had been told-off in view of such a contingency, were waiting behind ready to fall in at the least sign of wavering.

The scene of carnage was again repeated, but it only lasted a moment. The Turks, completely broken, withdrew, sullenly firing, and taking time to carry off their wounded and many of their dead. Still they held the redoubt, upon which they fell back apparently with the intention of holding it; but they were not allowed to remain long there. The attack on the Sgalince redoubt in the Russian centre had been equally unsuccessful with that on the Russian trenches on the left. The Russians pursued them with a murderous fire, and then six companies went at them with the bayonet and swept them out of the Pelisat redoubt like a whirlwind. At four o'clock the Turks were in retreat everywhere. The Russians occupied the whole of their first positions, besides pursuing the Turks a short distance with cavalry. The Russians were about 20,000. Their loss was estimated at 1,800, and the Turkish loss at 2,000 killed and wounded.

After this ineffectual attempt to break through the Russian line, Osman Pasha again relapsed into inactivity, the Russians taking advantage of the discouragement always following a repulse to deal a decisive blow against Lovatz. The Russian force engaged consisted of the 2nd division and a rifle brigade which had returned from Gabrova, marching ninety kilometres, with one brigade of the 3rd division under Prince Imeretinski, and Skobeloff's brigade of Circassian Cossacks. None of the Russian troops, except the last brigade, had been previously engaged. Altogether they numbered about 22,000 men; whilst the Turks, in and round Lovatz, had no more than 7,000.

Skobeloff, on the previous evening, marched from Kakrind, his previous defensive position, and carried a position on the north-east of Lovatz, which rendered the place virtually untenable. In the night, therefore, the Turks fell back on the fortified range of heights behind the town, and there awaited the attack. This was begun with artillery at sunrise, and the Russians' advance was so conducted that their artillery, passing south of Lovatz, took up a position enfilading the range of heights held by the Turks, and also cut off their retreat into the Balkans over the Trojan. Nevertheless, the Turks resisted stubbornly, and were only driven out by hard infantry fighting, which lasted till near sundown, when they tried to

retire upon Plevna; but Skobeloff's Cossack horse artillery stopped the way, and they went away due west, pursued by Skobeloff's Cossacks and part of the imperial escort.

The seizure of Lovatz having thus prepared the way for a renewed attack on Plevna, by September 6th there were gathered together before Plevna a total of about 90,000 men, supported by 250 field-guns, and twenty heavy siege guns.

The plan of the attack, which was fixed for the following day, differed but little from the previous plan, with the exception that the left wing was no longer open to attack from Lovatz, and consequently secure against a *déroute* like that of July 31st.

The Russians had the ground to the left, the ground of Schahofskoy in the previous battle. The Roumanians had the section of the environment to the right of the centre, being the ground on which Krüdener fought so stubbornly, although ineffectually, on the 30th of July. The front of each section was of about equal extent. The Turkish positions opposite the Roumanian section were the stronger both by nature and art. But there were only 28,000 Roumanians to 50,000 Russians, although it was decided that they should bear the brunt of the attack on the Grivitza redoubt. To the left of the Roumanian right, also menacing Grivitza, stood the Russian 5th division, prolonged toward the left flank by the 31st division. On the downs above Sgalince and Pelisat, where General Krüdener, commanding the 9th corps, made up by the two divisions just named, had his head-quarters, the alignment was still further prolonged by the 30th division and the 16th division, reaching from the touch of the 31st division to Bogot, where the 16th division was chiefly massed, and where General Kriloff, commanding the 4th corps, had his head-quarters. Prince Imeretinski, from Lovatz, detached one brigade south to Trojan to guard against trouble from that region, and then marched north along the chaussée, in the direction of Plevna, with three brigades—viz., one brigade of the 2nd division, one brigade of the 3rd division, and the Tirailleur brigade, whilst Skobeloff was with his Cossacks reconnoitring in the south-west of Plevna.

In the early morning, before it was light, the various batteries were moved forward, and brought to bear chiefly on the Grivitza redoubt and on the works above Radisevo. The firing began at half-past six, and continued, without intermission, the whole day, the Turks replying leisurely; whilst the 270 Russian guns thundered at their works to prepare the way for the assault by the infantry, who were lying under cover before Grivitza and Radisevo, awaiting the order to advance. Prince Imeretinski and General Skobeloff were also cannonading the Turkish positions between Krishine and Radisevo, both of these positions being strongly supported by the isolated hill, or mamelon, south-east of the town, and which the Russians considered a key to the position.

This bombardment of the outer works of Plevna, during which each gun fired once every quarter of an hour, thus making 12,480 shots during the day, did not produce much effect; and when the cannonade recommenced the next day, September 8th, it was not easy at first sight to recognise that the Russians had gained any advantage by their profuse powder-burning. The night before, the parapet of the Grivitza redoubt had seemed a good deal jagged by the Russian shell-fire; but, under cover of night, all its defects had been made good, and it looked as trim as if never a shot had been fired at it. But the Russians had been at work also during the night. They had gained a large slice of ground in the direction of Grivitza; that is, their working parties had been pushed forward in the darkness, and a battery of siege guns had been built and armed on an elevation comparatively close to and overhanging Grivitza village, and within easy battery range of the irrepressible redoubt.

As soon as the sun rose that battery came into action against the redoubt, supported by isolated big guns. Away to the right, and further to the rear on the left in rear of the advanced battery, the original battery of siege guns sent its fire sweeping down the valley, and over traversing undulations into what, in the previous battle, was called the Turkish first position, the redoubt and intrenched village in the central swell. This position was also receiving the fire of two or three batteries of field-guns stationed on the heights beyond Radisevo, the height where Schahofskoy's cannon stood so long. The redoubt could not reply to the siege battery, the range of the latter being too long, so it accepted punishment from that quarter, and pounded away in reply to the field batteries on the ridge.

The Russian siege battery firing into the

Grivitza redoubt made admirable practice; shell after shell burst in the parapet or went slap into the redoubt. Every now and then the guns were silent for ten minutes or so at a time, and sanguine people began to think that the stubborn defence had been abandoned, and that the defenders had departed bag and baggage. But when the Turk is in a place, and means to stop there, he is a difficult customer to dislodge. The pause had been but a short interval to repair damages, and presently the Grivitza gun-fire would recommence in its old jaunty fashion. It was not the key to the position, but its reduction would be a valuable gain; and instead of spreading their fire as they did, the Russians should have concentrated upon it the whole weight of their bombardment, and made it untenable by dint of a hailstorm of shells. As it was, they might bombard it for a week, sacrifice a whole brigade of infantry, and then, after all, not succeed in taking it. The assault was intended to have been begun the day before, at five in the afternoon; but owing to late starting and delays by the way, the troops were not quite all in position by the appointed time, and so the attack was postponed. Everywhere on the 8th, however, the infantry were in position waiting for the word. Behind every swell, in the hollow of every depression, lying down behind the screen of Indian corn, were the soldiers, some far away out beyond the batteries, and the Russian shells and Turkish shells whistling over their heads without disturbing them. Others were snugly stowed to the right and left of the batteries, lying on the reverse slopes so as to be clear of the hostile shells. All round the edge of the horizon, from the river Vid on the north, to the Lovatz-Plevna road on the south, rose up against the pale blue sky the white smoke of the cannon-fire. The Turkish horseshoe was girdled by a cincture of cannon-fire and armed men; but the Turk hardened his heart and gave back shell for shell, as, in the impending fight, he had made up his mind to return cheer for cheer, rifle-shot for rifle-shot, and bayonet-stab for bayonet-stab.

Thus the bombardment went on without doing over-much damage, whilst the villagers of Grivitza down in the hollow between the batteries, with shells interminably whistling over their heads, were actually engaged treading out their barley, on the primitive threshing-floor of hardened mud, the men shaking the straw, the women driving the ponies in the endless round.

The Roumanian guns, too, were firing steadily into the Grivitza redoubt from the position at the corner of the wood on Krüdener's right; but it was a long range, and the shells fell short of the redoubt on to the slope more to the left instead. Near them, in a little valley, and on a little hill, was the Russian great battery of the right flank, a battery containing twelve siege guns. The emplacement in which these were lodged was rough enough, but strong. This battery had three faces: one armed with six guns looked down the valley towards Plevna, and gave its fire to the redoubt and fortified village known as the Turkish first position. The centre face, with three guns, looked toward a Turkish redoubt behind the Grivitza redoubt, and connecting it with the great Plizitza position on the due north flank of Plevna. The right face, armed with three guns, looked across at the Grivitza redoubt itself.

Meanwhile the Turks developed a wider range of artillery fire than they did when Schahofskoy and Krüdener in vain dashed against their positions. The Turks were very careful in marking time—fired no harder than they found necessary, but replied steadily and deliberately in reply to a fire which, to all appearance, was not materially injuring them.

The Turkish camps on the most northerly ridge were full of men all the way back from the Grivitza redoubt to the Plizitza scarped height. On the central swell masses of their infantrymen were lying in the hollows, having turned out for the sake of safety from the shell-scourged redoubts.

Meantime, whilst the Grivitza-Radisevo positions were being ripened by the shell-fire, the same process was going on in the south and south-west of the Russian line, where Prince Imeretinski and General Skobeloff were directing the attack. On this side, from the hills bordering the road from Plevna to Lovatz, a fine view was afforded of the line described by the Russian and Roumanian positions round Plevna, which began opposite Bukova, extending nearly parallel with the Sistova road until beyond Grivitza, then curving round past Radisevo until within two miles of Plevna, nearly on the Lovatz road, then extending along the Lovatz road on the ridge as far as opposite Krishine. The line thus described was exactly in the form of a reaping-hook, with

the point opposite Bukova, the middle of the curve opposite Grivitza, the junction of the handle close into Plevna, and the end of the handle at Krishine. The point nearest Plevna, it will be perceived, was near the Lovatz road, at the junction of the handle with the blade.

In this direction the Russian batteries were within a mile of Plevna, and were shelling one of the redoubts behind Plevna in a corner formed by the course of the Sophia road. Columns of white smoke were rising to the sky, and the sharp whip-like cracks of these field-pieces were mingling angrily with the dull heavy roar of the siege guns in the big battery above. At this moment, about 4 P.M., Prince Imeretinski considered the first position of the Turks ripe for preparations, at least, for an attack, if, indeed, not for the assault itself, and pushed forward the infantry towards the first Turkish position amongst the trees at the foot of the hill on which stood the redoubt, in the bend of the Sophia road, which the Russians hoped to carry.

The fire was opened on both sides with much vigour, the infantry arriving in line and beginning the attack. The Turks were posted in the trees at the foot of the mountain, and probably half a mile in front; but the Russians gradually advanced down the side of the mountain through the trees, driving back the Turks, part of whom retired upon Plevna, but the greater part upon the redoubt. The Russians pushed down to almost the bottom of the hill, the Turks retreating up the smooth slope leading towards the redoubt by hundreds, and from the redoubt itself began to be poured forth a heavy fire upon the Russians on the opposite slope. The Russians pushed down steadily, nevertheless, in loose order, firing as they went; but as they neared the foot of the slope the Turkish fire became terrible. From the parapets of the redoubt poured forth a steady wave of flame, and the redoubt itself was soon hidden in the thick fog of white smoke that rose over it. The roar of this tremendous fire was simply fearful, and lasted about twenty minutes. Then the Russian skirmishing line, which had already reached the foot of the slope, began to withdraw, and in a few minutes they had retired to a position half-way up the slope, where they halted, and the slackening of the fire told that, for the moment, the attack upon the redoubt had failed. The Turks then came down again from the redoubt, and re-entered the woods at the foot of the slope where the Russians had been, and likewise those who had retreated towards Plevna came out again into the maize-fields, on the other side of the ravine, pushing along as though they would turn the right of the Russian attack. This was impossible, however, because the Russian infantry were lying close behind the ridge, and would have effectually prevented any movement of this kind.

During all the time this fight lasted, the Russian batteries, which had been advanced far down towards Plevna, were quite silent; and, encouraged by this, and seeing that the Russians remained in the positions to which they had withdrawn on the slope of the mountain, the Turks began to swarm out of the redoubt down to the foot of the slope, attacking in their turn, and bent upon driving the Russians back to the point which they had originally occupied in the morning. But the Russians had already been strengthening their positions by digging, and poured a fire from the line they had occupied, which, in steadiness and fury, was only equalled by the Turks from their redoubt. The Turks had already advanced a considerable way up the slope before the Russians opened fire, and they did not stand a moment under it. They retreated through the trees, and again up the slope to the redoubt, hotly pursued by the Russians, who followed them to the foot of the slope.

The fire on both sides then became dreadful, and the Russians having received a considerable number of reinforcements, their advance was far more steady and swift, more self-confident than the previous one had been. They swept down into the little hollow between the opposite slopes, and then poured a terrible fire on the Turkish redoubt from behind the trees, and under cover of the banks, stones, earth, and anything they could find to shelter themselves. This time the attack was, moreover, supported by the batteries on the right, which now advanced still nearer Plevna, and concentrated their fire on the Turkish redoubt.

At the time the Russians were advancing down the hill, the whole valley was filled with smoke. The town of Plevna, as well as the Turkish redoubts, and even part of the wood where the Russians were, had become invisible. The sun was just setting behind a mass of clouds, but it was seen for a few minutes like a fiery blood-shot eye,

which tinged the smoke hanging over everything with the colour of blood. Soon after sunset the firing, after a few sudden spurts, ceased for the night, with the exception of a casual alarm. The Russians remained in their positions at the foot of the slope till about 12 P.M., when they withdrew to the summit of the wooded hill whence they had made their attack. During the next day, September 9th, the operations were again limited to artillery fire, the batteries opposite Grivitza gaining ground a little, as well as the heavy siege guns in front of Radisevo. September 10th was passed in the same fashion—a languid, objectless cannonade, with the only result of advancing the batteries a few yards. The fact is that the staff, wishing to compliment the emperor, had commenced the bombardment on September 7th, the anniversary of his coronation, and intended to take Plevna on September 11th, the anniversary of his saint's day. This was, no doubt, very pretty; but the expenditure of fireworks, to say the least, was somewhat costly.

However, on September 11th the supreme effort began. The attack was concentrated on three points—the Grivitza redoubt, the Radisevo ridge leading to the mamelon, and the outlying redoubts of the great Krishine redoubt. The Roumanians were entrusted with the first task, General Kriloff with the second, and General Skobeloff with the third. It had been decided that the attack should be ushered in with the obligato artillery fire, and commence at 2.30 P.M. A skirmish, however, on the Russian left, between the Turks and Skobeloff's forces, suddenly developed at 11 A.M. into a regular engagement, which soon became general along the whole line.

In addition to this *contretemps*, a thick fog, which lasted the greater part of the day, also impeded the operations, and caused a great deal of confusion. The battle thus began on the extreme left, and thence ran round to the right, opposite Grivitza.

Skobeloff and Imeretinski, in order to begin the attack on their side upon the redoubt, had to advance their troops on to the hill immediately fronting the redoubts in the bend of the Sophia road. It was from this hill that the attack had been made upon Skobeloff four days before, and the hill had since been abandoned by the Turks, except a few skirmishers. Skobeloff advanced at eleven o'clock to take possession of this hill. The Turks immediately opened fire upon him. This was the beginning of the Turkish attack, which spread from the Lovatz road over Plevna, and up the Radisevo ridge, a position which has already been described. In the middle of this ridge was a low hill, or hump. From this point down to the end of the ridge, scarcely a mile from Plevna, the Russians had planted twenty-eight guns, the greater part of which were not more than 1,000 or 1,200 yards from the Turkish redoubts and trenches, and were a continual menace and danger to the Turks, who suddenly decided to try and carry the Radisevo ridge, and the attack here was directed principally against the above hump or hill, opposite one of their own redoubts. It was impossible, owing to the fog and smoke, to see the position of the combatants on either side. The fight lasted until nearly two o'clock. The Turks made three attacks upon Skobeloff, which were successfully repulsed, and two on the Radisevo ridge.

The three fights with Skobeloff were short, quick, and sharp, neither lasting more than five or ten minutes. This was owing to Skobeloff's manner of defence. He ordered his troops to reserve their fire until the Turks came within a hundred yards, then to open upon them a sudden and terrible fusillade, against which no troops could stand This drove them back almost immediately. Three times they came to the charge, and three times were they repulsed in the same sudden and furious manner.

The two attacks upon the Radisevo ridge lasted longer, and were repulsed with less ease. Not until about two o'clock did the fire die away, showing that the fight for the moment was over. Then the fog lifted slightly, and the position on both sides could be seen. The Turks in the trenches down towards Plevna were trying occasional shots, distinguished by little puffs of smoke, with masses here and there in the redoubts, showing, with an occasional shot from their cannon, that they had been repulsed with heavy loss—how much it is impossible to state; but as the loss of the Russians fighting under cover was more than 500, that of the Turks must have been between two and three thousand. The three days' artillery fire had evidently done them, however, very little harm, and it showed how strong they felt themselves to risk a repulse, knowing, to a certainty, that it would be followed almost immediately by a Russian attack. Indeed, this attack and

repulse of the Turks did more to prepare the way for the Russian attack than the whole three days' artillery fire had done. They had suffered severely, and must have been more or less discouraged and demoralised, as troops, even the best, always are at such a moment. It was most favourable, therefore, for the Russian attack, which was begun almost immediately, and exactly at the time originally intended; so that the fire had hardly ceased half-an-hour when it began again with unexampled fury.

Whilst General Kriloff attacked the redoubts down near Plevna, there was little to be seen along the crest of the Radisevo ridge, where the Russian guns could be perceived at work, with figures flitting round them, dimly seen through the smoke, strangely magnified by the intervention of the fog, until the gunners appeared like giants, and the guns themselves, enlarged and distorted by the same medium, appeared like huge uncouth monsters, from whose throats at every instant leaped forth globes of flame. There were moments when these flashes seemed to light up everything around them. Then the guns and gunners appeared for an instant with fearful distinctness, red and lurid, as though tinged with blood. Then they sank back again in shadowy indistinctness. The uproar of the battle rose and swelled until it became fearful to hear—like the continuous roar of an angry sea beating against a rock-bound coast, combined with that of a thunderstorm, with the strange unearthly sounds heard on board a ship when labouring in a gale.

This continued, without ceasing, for nearly two hours. The Russian guns were pouring their fire into the redoubt, and the Russian infantry hailing theirs into the trenches, while the attacking columns were advancing cautiously under cover of the smoke and fog, and standing corn, to get a position as near as possible before making the final rush. At about five o'clock the smoke lifted again, carried away by a gust of wind. At this moment, close before the redoubt, down near Plevna, a mass of Russian soldiers rose up in a field of Indian corn, and pushed forward with a shout. The Turkish fire just then seemed to have been dominated, nearly silenced, by the terrible storm of shot and shell poured in by the Russians. The moment seemed favourable for the assault; but the Russian shout had scarcely died away when there flashed along the parapet of the redoubt a stream of fire that swayed backwards and forwards, while the smoke rose over the redoubt in one heavy white mass. One continuous crash filled the air with bullets, from which, to the spectator, it did not seem possible for even a rabbit to advance. And, as it proved, the fire was too heavy for the Russians to make way. There were not enough of them to overpower the Turkish fire—not enough to suck up the Turkish bullets and leave sufficient to carry the parapet. A few struggled up on to the glacis, where they soon dropped, and the whole force remaining was repulsed, and had to fall back. At this moment General Kriloff sent two battalions to pick up the discomfited assailants, and lead them on again; but they had to fall back, and thus his second assault was also repulsed.

The stupidity of this method of attack was simply criminal. It was a mere matter of calculation. If a thousand men attack another thousand at close quarters for ten minutes, that means that, with breech-loaders, each thousand will be exposed to an initial shower of 4,000 bullets per minute. Two-and-a-half per cent., at least, of these bullets take effect upon the attacking party, of whom 100 men drop in the first minute, whilst the defenders under cover, at most, lose only 5 per cent. During the second minute the attacking party are exposed to 3,800 bullets, whilst they themselves can only fire 3,600. This time they lose over 10 per cent.—say 11 per cent.; whilst the defenders lose less than 5 per cent.—say $4\frac{1}{2}$. Thus, at the end of the second minute, the attacking party lose 95 men, reducing their force to 800 men, whilst the defenders lose only 43, so that they still have 907 men to oppose to 800. In the third minute the assailants have to face 3,628 bullets, and can only give 3,200. This reduces the assailants to 682 men, and the defenders to no more than 827. In the fourth minute the assailants can only give 2,728 bullets to the defenders' 3,308; this leaves 598 assailants to 756 defenders. In the fifth minute the assailants are reduced to 523 men; in the sixth minute to 447; in the seventh to 337; in the eighth to 310; in the ninth to 247; and in the tenth to 187 men; whilst the defenders still have, at least, 619 left. In the eleventh minute, the assailants would be reduced to 127; in the twelfth to 67; and in the thirteenth to 10, against 585 of the defenders.

This is supposing equal numbers face each other; and, at first sight, it would appear necessary for the assailants to number 2,000 only to carry the position. But this is a fallacy, because 2,000 men offer a better mark than 1,000, and 3,000 still better; so that the loss would be much greater in proportion. To fill up this loss, and render it harmless, therefore, a much larger number than 2,000 men would have to be detailed off to carry the position held by 1,000. Four thousand, at least, would be necessary—and perhaps even 5,000. Likely enough, 2,500 would fall, as against the 1,000 assailed; but if, as we have shown, 415 of the defenders cost 990 of the assailants, the bargain is a fair one. But then 1,000 men would never show the same front to 5,000 as they would to 1,000; so that the loss on 5,000 men would, probably, be far less than the loss upon 1,000.

This view, however, did not recommend itself to General Kriloff; and whilst he was frittering his men away, Skobeloff was preparing the ground for the attack on his side.

At four o'clock he brought down twenty pieces of artillery to the spur of the ridge overlooking Plevna. To not more than 1,000 yards distant from the redoubt he advanced his artillery, determined to make a desperate effort to capture the redoubt in front of him. This was a double redoubt in the bend of the Lovatz road, down near Plevna. He had advanced his troops down the slope of the mountain to within easy range. As the Turks immediately opened fire upon him from the redoubt, he returned the fire with steadiness and precision, putting his men under cover as much as possible, his cannon pouring a steady stream of shell and canister into the redoubt as well. In fact, he worked his cannon so much that several pieces were spoiled. He had determined to risk everything to capture this redoubt; and if Plevna were not taken, it would not be his fault. For three hours he kept up this fire; and just after Kriloff's second repulse, the Turkish fire having somewhat relaxed, dominated by the Russian, he thought the moment had come for making the assault.

He had four regiments of the line, and four battalions of sharpshooters. Still keeping up his murderous fire, he formed, under its cover, two regiments in the little hollow at the foot of the low hill on which was built the redoubt, together with two battalions of sharpshooters, not more than 1,200 yards from the scarp. Then placing himself in the best position for watching the result, he ceased fire and ordered the advance. He ordered the assaulting party not to fire, and they rushed forward with their guns on their shoulders, with music playing and banners flying, and disappeared in the fog and smoke. The advancing column was indistinctly seen—a dark mass in the fog and smoke. Feeling, as it were, every throb of the battle, Skobeloff saw this line begin to waver and hesitate. Upon the instant he hurled forward a rival regiment to support, and again watched the result. This new force carried the mass farther on with its momentum, but the Turkish redoubt flamed and smoked, and poured forth such a torrent of bullets that the line was again shaken. Skobeloff stood in this shower of balls unhurt. All his escort were killed or wounded, even to his little Kirghiz servant, who received a bullet in the shoulder. Again he saw the line hesitate and waver, and he flung his fourth and last regiment, the Libansky, on the glacis. Again this new wave carried the preceding ones forward, until they were almost on the scarp; but that deadly shower of bullets poured upon them; men dropped by hundreds, and the result still remained doubtful. The line once more wavered and hesitated. Not a moment was to be lost if the redoubt was to be carried.

Skobeloff had, however, only two battalions of sharpshooters left, the best in his detachments. Putting himself at the head of these, he dashed forward on horseback. He picked up the stragglers; he reached the wavering, fluctuating mass, and gave it the inspiration of his own courage and instruction. He picked the whole mass up, and carried it forward with a rush and a cheer. The whole redoubt was a mass of flame and smoke, from which screams, shouts, and cries of agony and defiance arose, with the deep-mouthed bellowing of the cannon, and, above all, the steady, awful crash of that deadly rifle-fire. Skobeloff's sword was cut in two in the middle. Then a moment later, when just on the point of leaping the ditch, horse and man rolled together to the ground, the horse dead or wounded, the rider untouched. Skobeloff sprang to his feet with a shout, then with a formidable savage yell the whole mass of men streamed over the ditch, over the scarp and counter-scarp, over the

parapet, and swept into the redoubt like a hurricane. Their bayonets made short work of the Turks still remaining. Then a joyous cheer told that the redoubt was captured, and that at last one of the defences of Plevna was in the hands of the Russians; but at what a sacrifice! In that short rush of a few hundred yards, 3,000 men had been left on the hill-side on the glacis, the scarp, and the ditch—one-fourth of his whole force. Skobeloff himself regarded such attacks upon such positions as almost criminal, and disapproved highly the whole plan of attack on Plevna; but he believed that if an attack was to be made, it could only be done in this manner, and that although the loss of men might be great, as we have just shown it must be, it was better that the loss should be incurred, and the victory won, than half the loss with a certainty of defeat.

But having gained the redoubt, the question was, how to hold it. It was dominated by the redoubt of Krishine on the left, exposed at the Plevna side to the fire of the sharpshooters, to the Turkish forces in the wood bordering on the Sophia road, and open to the fire of the intrenched camp. There was a cross-fire coming from three different points. At daylight next morning, September 12th, the Turks opened fire from all sides. The distance from the redoubt at Krishine had, of course, been accurately measured, and the guns dropped shells into the redoubt with the utmost precision on the exposed sides. The back of the redoubt was a solid rock, on which it was impossible to erect a parapet. All the earth had been used for the construction of the parapets on the other side. It was evident that the position was untenable unless the intrenched camp on the other side of the Plevna and Krishine redoubt could be taken. Skobeloff renewed his demand for reinforcements made the evening before. Although his losses had been great, the spirit of his troops was so good that, with another regiment, he was willing to undertake to capture the Krishine redoubt and the intrenched camp, or he would undertake to hold the positions until something could be attempted in some other quarter. Could one or two more positions be carried during the next day, say the Krishine redoubt and one intrenched camp on the same ridge as the Grivitza redoubt, the fall of Plevna might be considered certain. But at sunrise the Turks began an attack upon the captured redoubt, and the storm of battle again raged with fury there, while all was quiet everywhere else. The desperate attack of the Turks was repulsed. Another attack was made and another repulse; and this continued all day long, until the Turks had attacked and been beaten five successive times.

The Russian losses were becoming fearful. General Skobeloff had lost 2,000 men in attacking the redoubt. By the afternoon he had lost 3,000 more in holding it, while his battalions shrivelled up and shrank away as if by magic. One battalion of sharpshooters had been reduced to 160 men, and one company which had been 150 to forty. An immense proportion of officers were killed or wounded. Only one commander of a regiment was alive; scarcely a head of a battalion was left. Two officers of the staff were killed, one of whom was Verastchagine, brother of the great artist. Another brother was wounded. General Dobrovolsky, commander of sharpshooters, was killed. One officer was blown to pieces by the explosion of a caisson. Captain Kurapatkin, chief of the staff, standing beside this officer, had his hair singed, and suffered a severe contusion. Only General Skobeloff himself remained untouched. He seemed to bear a charmed life. He visited the redoubt three or four times during the day, encouraging the soldiers—telling them help would soon arrive; Plevna would soon be taken; victory would soon crown their efforts; telling them it was the final decisive blow struck for their country; for the honour and glory of the Russian arms; and they always replied with the same cheery shouts, while their numbers were dwindling away by hundreds. He again and again sent for reinforcements, and again and again informed the commander-in-chief that the position was untenable. The afternoon wore away and no reinforcements came.

General Levitzki, however, formally refused reinforcements, either because he thought the position, in spite of General Skobeloff's representations, was tenable, or because he had no reinforcements to give. General Kriloff, on his own responsibility, sent the remnant of a regiment which had attacked the redoubt; but of the 2,500 there were barely 1,000 left, so it was utterly incapable of going into action that day; and even this regiment arrived too late. General Skobeloff had left the redoubt at four o'clock to go to his tent on a woody hill opposite.

He had been there scarcely an hour when he was informed that the Turks were again attacking the right flank on the Lovatz road, immediately above Plevna. He galloped forward to see, and was met by an orderly with the news that the Turks were also attacking the redoubt a sixth time. He dashed forward towards the redoubt, in hopes of reaching it in time, but was met by a stream of his own men flying back. They were exhausted by forty-eight hours' incessant fighting, and were worn out, hungry, and dying of thirst and fatigue. Owing to the inactivity of the Russians during the day, the Turks had been enabled to collect an overwhelming force, which had made one last desperate effort, and had succeeded in driving Skobeloff's force out. One bastion was held to the last by a young officer with a handful of men. They refused to fly, and were slaughtered to the last man.

This temporary success of Skobeloff's, which cost him three-quarters of his forces, was all that the Russians had to show for their endeavours on the extreme left. In the centre, Kriloff had been less fortunate in point of success, and but little less unfortunate in his losses. The great attack had been signally repulsed along the whole Russian line, at an immense loss.

The only enduring success, purchased at a similar cost, had been obtained by the Roumanians, assisted by the Russians, who carried the formidable Grivitza redoubt in the evening.

At half-past two P.M. the attack was made by the Roumanians, but, by some mistake, the Russians arrived half-an-hour too late. The Roumanians attacked from the east and south-east, the Russians from the south and south-west by a line of skirmishers, with men carrying scaling-ladders, gabions, and fascines among them. The latter had their rifles slung on their backs, and were ordered in no case to fire, but merely to run forward, fill up the ditch, and place their ladders behind. Then followed the second line, in company column formation for the attack, followed by the third line to support the assault.

The Turkish fire directed against the assailants was incessant, though it did not do so much damage as might have been expected, owing to the assailants being more or less under cover of the parapets. But in spite of this the assault was repulsed, and the storming party all fell back except two companies of infantry, which had found cover and kept up a brisk fire against the redoubt.

At half-past five the attack was renewed by a battalion of the Roumanian militia, followed by two Russian battalions of the 17th and 18th regiments. The redoubt was then carried, and the Turks withdrew to another redoubt in the rear of the captured one, whence they poured such a withering fire into the Russo-Roumanian party, that before reinforcements could arrive they were able to return to the attack, and drove the victors out of their newly conquered positions.

Meantime, however, the Russian reinforcements had arrived, together with three battalions of Roumanians. Then followed a third assault, and the work was finally captured at seven P.M. Four guns and a standard were the trophies of the feat of arms. More than once during the night did the Turks advance with shouts of "Allah!" but no serious attack was made, and in the morning the Turks in Plevna saw the flag-staff defiantly exposing the Roumanian flag in the hitherto dreaded Grivitza redoubt. Thus the capture of this redoubt was the only result of the great assault of September 11th, which cost the Russo-Roumanian forces no less than 14,000 men. And even this success was of no value, for the Grivitza redoubt was commanded by the Plevnitza redoubt in its rear, whence an increasing fire was kept up, against which, however, the Roumanian garrison held its ground to the last.

But, like Loris Melikoff, the Russian commanders in Bulgaria knew how to derive service from their experiences.

The success of the Roumanians, or let us say, the success of the operations at Grivitza, showed them the proper and only way to capture Plevna. They had worked up to the redoubt by sap; and by sap and starvation, Plevna, they at last saw, could only be taken. Plevna, they at last became convinced, had been turned into a vast fortress, against which they would have to conduct operations in the same way that the allies proceeded against Sebastopol, or the Germans against Paris.

And in these circumstances it is not surprising that the Russians should think of the veteran general who had rendered them such services twenty years before—of General Todleben. His advice was plain, simple, and to the point. It was to invest Plevna

with a series of earthworks and redoubts, and cut off Osman Pasha from his communication with Sophia and Widdin. Instead of going to Plevna to attack Osman Pasha, the Russians were to make an outer Plevna of their own, and force Osman Pasha to attack them. This advice was not heroic, but it was sensible; and having due regard to the probable course of future events, it was certain of success.

This was so clear, that every one, except Osman Pasha, foresaw the end. Or, as it may not be fair to hold Osman responsible, we may say everybody except the authorities at the Porte.

As soon as it became apparent that the Russians had changed their plan of action —which speedily became apparent to all the world—Osman Pasha should have changed his, and have evacuated Plevna, which had done all the damage to the Russians which lay in its power. What Osman Pasha might have done is of course, more or less, barren speculation. But it is conceivable that, having a small garrison in Plevna, he might have withdrawn all the forces in Western Bulgaria with him across the Balkans, and, uniting with Mehemed Ali, have offered a determined front to the Russians on the Lom, and taking the offensive from Kezanlik to Rustzuk, at any rate have succeeded in forcing the Russians further back from the basis.

However, Osman Pasha did nothing of the sort, and remained in Plevna to be smoked out like a badger out of his hole. The Russian errors before Plevna lasted from June 11th to September 11th. The Turkish errors in Plevna began on September 11th, and continued to the bitter end. Grivitza was the turning-point for both.

But if Plevna was the stone wall against which the Russians ran their heads in vain, the Schipka Pass was equally the stumbling-block of the Turks. Here the endeavours of Suleiman Pasha still remained barren of results, although Fort St. Nicholas, the high rock frowning upon the mouth of the pass, which, to the Czar and Sultan, was of equal importance, had an exceedingly narrow escape of changing owners on the 17th of September. At one time, indeed, soon after the attack commenced, which was shortly before daybreak ("the darkest hour before the dawn" being well chosen as best for all night attacks), it was fully believed that it had fallen. Had the attacking force been supported by the efforts of those upon whom devolved the duty of co-operation, all might have been well with the Turks, and the standard of the Prophet have again assumed its place in the entire range of forts, forming so insuperable an obstacle to the capture of the celebrated pass. Suleiman Pasha had waited until he had succeeded in forming as handy an army as any of his brother generals could boast of; and, from all that can be gathered, it was no fault of his that the plan he had formed was not crowned with success. The causes have not even yet been fully ascertained; but there can be no doubt it was in no way his intention to dream of capturing the Russian positions by a direct attack upon the principal one of them. A threatening demonstration on some or one of the chain of forts in the rear of Fort St. Nicholas, and parallel with the main road through the pass, might stand a very fair chance of success; and this would appear to have been intended on the 17th of September. The troops told-off to commence the attack (nearly 3,000 in number), did their duty admirably, and succeeded in obtaining a firm foothold upon the rocky fort, a considerable portion of which soon fell into their possession. Exposed for hour after hour to a galling fire on their front and on both flanks, it is marvellous how they stood their ground so long; seeing, with their then advantage in point of numbers over the enemy in their immediate front, that they could not, unless a diversion were made in their behalf, hope to maintain their ground even if the entire fort fell into their possession. Upon whose shoulders the blame rests (and certainly Suleiman Pasha himself ought to be freed from it), is not an easy matter to ascertain. The only reason which can be assigned for the failure is, that the points chosen by the right and left attacks were found to be too strong; still, to capture them was one matter, but to make an important auxiliary movement was a far easier one. Very feeble flank attempts were made by the generals to whom the duty was assigned; and scarcely credible accounts were bruited about of the inefficiency, and even absence altogether from the fight, of the officers with these troops. The action lasted until nearly mid-day, when the unsupported troops in the centre, having no hope of co-operat on from the east—for instance, through the Travna Pass—or from the west, and having actually seen a large body of the enemy rapidly coming up to attack

them, were very properly ordered to retire. Disappointed and galled as they were, it was not to be wondered at that they fled in disorder down the side of the steep rock which it had cost them so much to gain. And great was Suleiman Pasha's good fortune that the fear occasioned by their flight did not communicate to the rest of his army. A useless sacrifice of life and limb was alone the result of the day's work. About 1,000 were killed, wounded, and missing; and there was scant hope of the Turks finding the latter taken prisoners, the bayonet having been actively employed during the retreat. Still, after a defeat, the next thing naturally to be expected is a panic among the troops to whom the fortune of war has been unfavourable. Such was the case on the night following the attack, when, from some unknown cause—possibly owing to the soughing of the wind, which had risen high as the sun went down, and predisposed the nerves of the pickets to believe every crackling branch a Russian footstep—the alarm was given, and the greatest excitement prevailed amongst the horde of irregulars who formed the rear in advance and the van in retreat of Suleiman Pasha's numerous army. They cared not to wait until the cause could be ascertained. The fact of the alarm being given was enough, and the Russians might be on their heels. At every step as they rushed pell-mell down, generally laden with the booty they had succeeded in plundering on the march, they added to the confusion, especially amongst the swarm of camp-followers and the great numbers of Bulgarian peasants, who were enforcedly employed in the transport service. It was not for more than an hour after the panic had arisen that any signs of its being allayed could be observed, though the admirable conduct of the regular troops in calmly taking up their assigned positions, should have put to the blush even such poltroons as those who had been the first to fly. A little reflection might soon have convinced the most chicken-hearted of Bashi-Bazouks, with his waist stuck full of an armoury of pistols and daggers, that something more than a few strong shots would herald the Russian advance. He did not, however, give himself the time for thinking, but joined his comrades in the rush to the rear, till he discovered himself to be alone and without a following even of the class who are to be found with all armies in the field. Thus more than a month had elapsed since Suleiman Pasha occupied the heights which gave him such a powerful advantage over the Russians, who were cooped up in the rock and behind the earthworks which lay across the pass, and yet nothing had been effected towards the capture of what had become a veritable stronghold. His telegrams had announced the closing of every inlet of the besieged, with the exception of the main road from Gabrova; and why this was not attempted to be blocked whilst a sufficient portion of the army kept the garrison at bay, was by no means apparent.

As it was, Suleiman Pasha lost, between August 20th and September 20th, over 10,000 men, without reaping the least advantage beyond prolonging the struggle.

To sum up the state of affairs after the repulse of the third attack upon Plevna, the campaign on both sides may be said to have resolved itself into three sieges. There was the siege of Plevna in the west; the siege of the Quadrilateral in the east by the Russians; and the siege of the Schipka Pass by the Turks.

Henceforth, operations were confined to the closer investment of their positions on the one side, and attempts to cut the communications of the besieged on both sides, whether at Plevna, in the Quadrilateral, or at Schipka.

CHAPTER XXIII.

THE INVESTMENT OF PLEVNA.

As soon as the Russians had determined formally to invest Plevna, and reduce it as they would a fortress, General Kriloff was placed in command of the cavalry, and sent to the rear of Plevna on the Sophia road, for the purpose of cutting off the Turkish

supplies. As the Turks had few cavalry, and that not good, General Kriloff should have had it all his own way. The country was open, well adapted for cavalry movements, and an active leader with cavalry and horse artillery should have been able to make the passage of convoys difficult. As the Turks had about 50,000 men in the Plevna position, the question of supplies was an urgent one with them, both for provisions and munitions; and the magazines all required replenishing.

News, however, was received at Russian head-quarters that more Turkish forces were coming from Sophia; but it was hoped that Kriloff would meet and drive them back. But soon the Russians were surprised to hear of Hifzi Pasha's arrival at Plevna with a small escort. It was supposed that he avoided Kriloff by taking the by-ways; General Kriloff himself being somewhere between Lukovatz and Teliche.

But in spite of General Kriloff's proximity, the Turks succeeded in passing two convoys into Plevna under his very nose. The first was a convoy of about 2,000 waggons, accompanied by reinforcements for Plevna, consisting of ten tabors of infantry, one battery of artillery, and three regiments of cavalry.

General Kriloff did not discover the presence of these convoys until they had arrived at Teliche, where he went to attack them. He found them already intrenched, with guns in position, and mounted in a battery. An artillery fight ensued, which lasted all day, with no result, Kriloff being unable, of course, to attack so large a force of infantry with his cavalry. That night he retired to the previous position he occupied at Dubnik, on the Sophia road, and nearer Plevna. Next day the Turks advanced upon Dubnik, and attacked him in turn. Another artillery fight ensued, which lasted all day. Towards evening, however, two columns of infantry came out of Plevna, and taking Kriloff in the rear, obliged him to withdraw, thus leaving the road open for the passage of the reinforcements and convoy. He retired upon Trstenik, while General Lascaroff, who had only then succeeded in forming a junction with Kriloff, was obliged to retreat further back across the Lovatz road to Bogot. The Turks, therefore, passed the convoy without the loss of a single waggon.

The whole affair was very feebly managed, partly because General Kriloff's instructions were unsuited to the force under his command. He was told to hold the Sophia road at Dubnik, a thing which was manifestly impossible against infantry, especially at a point so near Plevna, where he could be attacked in the rear. A general in command of such detachments should have no definite instructions except to do as much harm as possible to the enemy, choosing his own time and place. Convoys should have been attacked forty or fifty miles beyond Plevna, and the attack kept up if necessary until under the very guns of the place. In a running fight of this kind, extending over forty or fifty miles, even with a convoy protected by infantry, the greater part of the carriages would be smashed by the artillery, the draught horses and oxen killed, and the drivers frightened away. As the Turks had little cavalry, and that only of the very poorest kind, the Russian cavalry could have scoured the whole district between Plevna, Widdin, the Danube, and the Balkans with impunity, the country being so open that there was not the slightest danger of being cut off by infantry. But General Kriloff was not a cavalry man at all, and he handled cavalry as if it were infantry, was afraid of being cut off, and thought he must keep his communications open, forgetting that cavalry in a perfectly open country can only be cut off by cavalry, of which the Turks had none worth speaking of. General Kriloff, instead of retiring upon Trstenik "to keep his communications open," should, on the contrary, have cut loose from the Roumanian right wing, and advanced on the Sophia road to the Balkans with half his forces to meet the next convoy, while the other half might have moved in the direction of Widdin to meet supplies coming from there.

Upon retiring, Kriloff left two regiments of Cossacks at Etropol to watch the Sophia road, and another convoy slipped through the fingers of this detachment on September 24th. But Etropol was too far from the Sophia road, in the first place; and, secondly, the Russians did not place outposts sufficiently advanced to give warning in time. This convoy, besides, did not come along the Sophia road, but on another alongside it, which the Russians had not discovered. By the time they had received information of its coming, and had reached the scene of action, the convoy was almost under the guns of a protected bridge over the Vid.

But had they charged even then, they might have captured the greater part of the convoy, as it was only protected by cavalry that ran away. They waited, however, several minutes for the artillery to come up, and then the officer in charge lost about fifteen minutes in writing a report to General Kriloff, to say that he meant to attack. By that time the convoy, for the most part, had got safely over the Vid, either by the bridge or by a ford, so that the report was superfluous. The Russians threw a few shells at them, to which the guns protecting the bridge instantly answered. Then, as it was quite dark, they retired to Etropol, the whole spoil being one pair of oxen.

It was perfectly clear that, as long as Osman Pasha had the back-door open, it was no good for the Russians to sit down before the front door and side entrances. It was absolutely necessary to close the ring, and extend the sides of the horseshoe across the river Vid, to the west of the beleaguered place.

Meanwhile the Turks had been fortifying the road from Orkhanieh to Plevna, and had occupied a strong position at Gorni Dubnik, half-way between the rivers Vid and Isker. Here they had erected a large redoubt, flanked by two smaller ones—the whole held by twelve battalions. Further towards the Isker the Turks had another strong position at Teliche, and a third between Gorni Dubnik and Plevna, at Dolni, or Lower Dubnik. Practically, these positions formed part of the Plevna defences, for without them Plevna could not be held. Once in the hands of the Russians, Chebket Pasha, who was commanding the army of supply for Osman Pasha, could no longer throw his convoys and reinforcements into Plevna.

It was therefore absolutely necessary for these positions to be in the power of the Russians. Till then the investment could not be completed; and thus General Gourko—Kriloff having amply demonstrated his incapacity — was entrusted with the task, and the command of what was called the West Army. He at once made a series of demonstrations against all these positions. On October 24th, the Russians round Plevna opened a furious cannonade, in order to mask what was going on to the west, and to prevent Osman Pasha making any sortie against General Gourko. This general, after marching in force against Teliche, suddenly wheeled round, leaving a division of the guards to attack Teliche, whilst he himself fell upon Gorni Dubnik with twenty-four battalions of infantry, one regiment of cavalry, and sixty guns. The attack lasted from six in the morning till six at night, when the Turks, utterly exhausted, hoisted the white flag after five of their battalions had escaped to Plevna. The remnants of the remaining seven surrendered. The guards at Teliche were not equally successful, and were signally repulsed; but on October 29th, Gourko having reinforced the assailants, Teliche also fell. Thence General Gourko wheeled back again upon Dolni Dubnik with a division and a-half and sixty-four guns, before which the Turkish garrison of 5,000 men at once retreated into Plevna during the night before the attack had commenced.

With this operation the line of investment round Plevna was completed by a cordon of infantry and artillery, besides the army of the west under Gourko pushing on towards Sophia, and preparing to cross the Balkans far to the west of the force checking the Russians at Schipka.

From Grivitza round to the Lovatz road the line was just where it was at the moment of giving the assault at the last attack on Plevna. The artillery occupied the ridge before Radisevo, with the guns extended down the line towards the Lovatz road to not more than a mile from Plevna. On the Lovatz road General Skobeloff was not so far advanced as he was at the time he made his assault. The Turks, taking advantage of the moment after the battle when the Russians had withdrawn, and warned that their lines were not invulnerable in this direction, constructed four new redoubts; so that Skobeloff, instead of three redoubts, had seven before him. When Skobeloff first attacked here, when Krüdener was defeated, he found no defences at all, and he even entered Plevna, but with only one battalion. As it was, his line had been removed to the front of a village called Brestovetz, on a cross-road to Lovatz. From here the line extended to the Vid. It then crossed the Sophia road about a mile from the bridge over the Vid. From here it passed parallel to the river until just below Opanes, where it again crossed the Vid, and curved round to the Grivitza redoubt, about a mile in front of Grivitza. The Russian line of investment was then thirty miles long. The

Turkish position measured from the Grivitza redoubt to the bridge over the Vid, eight miles; from the Krishine redoubt to the Bukova redoubt was about five miles. The line was of an irregular, oval shape, with a circumference of about twenty miles.

With the force the Russians had in the beginning of November (120,000 men), they were able to fill two lines of continuous trenches around the whole line of investment as full as it was convenient for men to lie in trenches. This was, however, one weak point in the investing lines which it was necessary to strengthen. This was the position in front of Brestovetz.

After the battle of Plevna it was thought unsafe for Skobeloff to remain in his old positions on the Lovatz main road, and he was ordered to fall back on Tucenitza, completely abandoning the Lovatz road, and placing an impassable ravine, which runs parallel to the road about a quarter of a mile distant from it, between him and the Turks. When he again advanced to occupy his old positions, he found, as above stated, that the Turks had considerably advanced theirs, and had constructed four new redoubts. He succeeded, however, in occupying Brestovetz, on the left of the road, and in constructing a redoubt in front and on the left of the village, and the line of trenches across the road to the ravine already mentioned. The Brestovetz redoubt was just opposite the Turkish Krishine redoubt, from which it was distant about 1,300 yards. But this Brestovetz redoubt formed a kind of angle projecting into the Turkish lines, and was somewhat exposed and dangerous. It became necessary to strengthen it, in consequence of the continual casualties. This could be done by seizing the small wooded hill immediately in front of the right wing between the Lovatz road and the ravine already spoken of.

It was most unfortunate for the Russians that these positions were ever abandoned, for they were about as high as the Krishine redoubt; they completely commanded Plevna; and the two redoubts captured by Skobeloff in the last affair, and fortified, would have rendered the Russian positions here much stronger than they could afterwards be made. The Turks had since then constructed a strong redoubt on the summit of the hill between the Krishine redoubt and the Lovatz road, the very spot where Skobeloff planted two batteries during the last affair. It was not the hill with the redoubt which Skobeloff resolved to capture, but one between the Lovatz road and the ravine. It was defended by trenches, and held by about fourteen tabors, perhaps 7,000 men, though Todleben believed there were a great many more, as the position was most important. The combined movement was arranged with General Gourko, who was to open fire all along the line, and likewise advance and occupy the position in front of him towards the bridge over the Vid, in order to shorten his line likewise.

The attack was fixed for five o'clock. By that time it was so dark that nothing could be seen more than five feet off. Skobeloff reviewed his troops that were destined for the attack—the battalion of sharpshooters. He then got down from his horse, went about among the men, talked to them, told them, especially the under-officers, just what they were to do, and finished by informing them he would lead the assault in person. This regiment was one which attacked and carried these same heights during the last affair of Plevna, on the second day of the bombardment. The regiment, having taken these heights, slipped out of the hands of its officers, and, as will be remembered, pursued the Turks to the foot of the glacis of the redoubt afterwards captured by Skobeloff, with the result that two-thirds of the regiment were destroyed. It was the recollection of this event that decided Skobeloff to lead the attack himself. It was important that the men should be stopped at the right moment and at the right place, and that the intrenchments which he intended to throw up should be properly laid, as a little mistake easily made might end disastrously. It was not, therefore, mere bravado which made him decide to lead the assault himself.

At half-past four he mounted his horse, put himself at the head of his troops, and disappeared in the fog. At five o'clock the fog began to turn dark, showing the approach of night. The Turks must have thought there would be little call for further vigilance that day. On the approach of darkness the roar of eighty guns was heard that vomited splashes of flame upon the murky fog, and then were silent. Then came the scream of eighty shells seeking their destination in the obscurity. Then there was the crash of the infantry fire along the whole line, except on the point of the attack, for it was Skobeloff's design to use the fog for cover, and take the Turks by

surprise. The infantry fire rolled along in front of Brestovetz, and soon the bullets began singing overhead, telling that the Turks were replying; but there was little firing on the right wing, where the attack was to take place. Finally, after about a quarter of an hour, there were two or three volleys in this direction, followed by a Russian shout, and the position was carried.

As it turned out, the Turks were surprised, and did not discover the approach of the Russians until they were within 100 yards. By the time they had seized their arms and fired two rounds, the Russians were on them with the bayonet, and it was all over. In a moment those who did not fly were bayoneted. The attack was led by two companies of sharpshooters, followed closely by the 9th battalion and the Vladimirski regiment. Every man was provided with a shovel, and immediately began making trenches, as indicated by Skobeloff. In a very few minutes they were under cover from a heavy but ill-directed fire, poured into them from the next hill, not distant more than 250 yards. Skobeloff stayed until about ten o'clock, when he thought the men had made the place secure, and returned to Brestovetz to supper. He had scarcely washed when the fire broke out again with fury on the right flank. Skobeloff mounted again, disappeared in the darkness and fog, and did not return till morning. He found the Turks making a desperate attempt to recapture the position, and arrived on the ground in the nick of time, as some confusion had ensued; for the reserves, who lost their way in the fog, coming in the wrong direction, got fired into from their own side. There was also a report that Skobeloff was killed, which discouraged the troops. He arrived in the middle of the Turkish assault, one fellow having leaped into the trench with the cry of "Allah!" where he was bayoneted. The attack was repulsed; but the Turks made a second and third one, and each time were driven back with ease.

With this successful movement of General Skobeloff's, the circle of investment was now drawn as close as could be without actually besieging the Turkish positions. Nevertheless, in only two places, at the Grivitza redoubt and on Skobeloff's position, were the combatants within speaking distance of each other. There was very little of artillery fire during this period; and Todleben, having abandoned his plan of concentrated volley-firing upon specified points, only put it in practice once in forty-eight hours.

The Russian lines were completely connected by a telegraph encircling the place, so that they could concentrate immediately upon any point of the circle that should be attacked. This was further facilitated by the peculiarity of the ground, which enabled the Russians to see every part of the Turkish positions from some point in the Russian lines. Any concentration of the Turkish troops could therefore be seen, and the numbers estimated, unless such concentration were to be made at night. Even then the exact numbers could be seen at daylight as soon as the movement began; so that it was impossible for Osman Pasha to gain time by making feints. If he wanted to break through, he would simply have to gather his troops together during the night, and throw them in a mass upon some point of the Russian lines at daybreak, and get through. The result could hardly be less than disastrous; though less so, perhaps, than capitulation.

Much speculation was indulged in as to the direction in which Osman Pasha would try to break through. It seemed scarcely likely that he would attempt it by the Widdin road, where, although the Russian line was weakest, he would be certainly thrown back upon the Danube, and taken in flank besides, if necessary, by the Servians and Roumanians, still at Kalafat and on the Danube.

In point of fact, Osman Pasha had lost all chance of escaping from Plevna as soon as General Gourko had occupied Teliche and the two Dubniks, and the infantry had closed round to the west of Plevna. Unless the siege of Plevna could be raised by an army marching to its succour, it was doomed to fall, and Osman Pasha and his army predestined to surrender.

But where was external help to come from? As will be remembered, the Turkish commanders were incapable, or incapacitated from making any simultaneous movement. After the second repulse of the Russians by Osman Pasha on July 31st, he quietly sat down and waited for "something to turn up." Then Suleiman Pasha executed his attack on the Schipka, August 23rd. This was repulsed, and then Suleiman Pasha sat down and waited for something else to turn up. Thereupon Mehemed Ali also made a series of attacks along the line during the days from August 27th to

August 30th; and, having gained a few yards of ground, he also sat down and waited for something more to turn up. Hereupon Osman Pasha suddenly awoke, and, finding that nothing had turned up, resolved to try and turn it up himself, and made his unsuccessful sortie on August 31st. This alarmed Suleiman Pasha, and he, too, went forth to find the will-o'-the-wisp of something to turn up, and made his second futile attempt on Fort St. Nicholas September 17th. This equally alarmed Mehemed Ali, who suddenly discovered that there was nothing to turn up on the Lom lines, and returned to his old positions, much to the astonishment of the Russians and the disgust of the Seraskeriat, which marked its displeasure by recalling him and appointing Suleiman Pasha to his place, in hopes that he, at least, would try and do something to break through the Czarevitch's lines, and thus assist Osman Pasha. But neither Suleiman Pasha nor Mehemed Ali could do or have done more than they did with the means at their command. Thus Mehemed Ali insisted, time after time, on the absolute necessity of a thoroughly well-organised telegraph service in the field, and connecting the head-quarters of the different armies amongst each other, as well as with Constantinople. Still, in spite of all his endeavours, the Seraskeriat would not consent to this, being afraid that, if permitted, it would place too much power in the hands of the commanders, who might be tempted, by the facility of communications, to concert measures and plan attacks without the previous permission of the authorities at Constantinople. Then, besides this great drawback, there was the lax manner in which even the existing telegraph service was carried out. There was not only an insufficient number of clerks, but even they were, with very few exceptions, incompetent to do their work with the exactitude and promptitude requisite. This was perfectly well known to the authorities; but so great was their antipathy and distrust of foreign assistance, that they preferred exposing their conntry to real danger, rather than run an imaginary risk. Battling continually and energetically against such abuses and prejudices, it is not surprising that Mehemed Ali accomplished so little, but that he accomplished so much, and, by a judicious display of the forces and means at his command, to impress the Russsians with an idea of power which he himself was far from possessing.

CHAPTER XXIV.

CLEARING BULGARIA.

After having been closely invested, and all the precautions taken to prevent Osman Pasha from effecting his retreat and cutting his way out through the Russian lines, the bombardment of Plevna recommenced all round on November 22nd, the Turks replying energetically to their enemy's fire. Already, on November 12th, the Russians considered the position of Osman Pasha quite hopeless, and on that day summoned him to surrender. Though this was denied at the time, good authorities still contend that it was the case. But at any rate, with the capture of the Montule Verde—or Green Hill—by Skobeloff, Osman Pasha's chances of escape were reduced to a minimum. And these chances were still further reduced to zero when the Roumanians crossed the Danube and captured Rahova and Dzibra Palanka, driving the weakened garrisons into Widdin, and occupying the main road from Lom Palanka to Sophia, which cut through Osman Pasha's line of retreat.

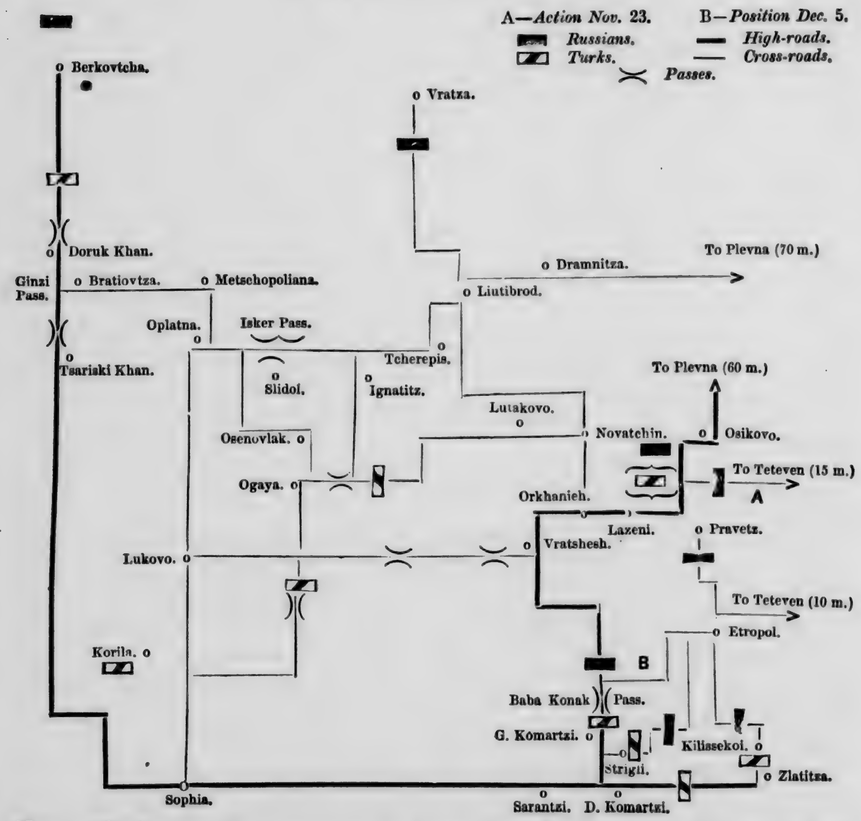
If Osman Pasha had seized the opportunities he still had during the month of October, he might have saved his army of 40,000 to 50,000 men. But from whatever cause—whether because of his orders from Constantinople, or because he wanted to gain time by engaging and holding fast an army of over 100,000 men, in order to allow the Porte to form a fresh army south of the Balkans—he omitted to do this, and had no further chance of forcing the enemy's lines, unless he heard the thunder of Mehemed Ali's artillery coming to the rescue

whilst Fazli Pasha on the Lom line, and Raouf Pasha at the Schipka, engaged the troops of the Czarevitch and General Radetzki. That things were rapidly approaching a crisis was apparent from the arrangements the Turkish commanders were making at the last moment. Mehemed Ali was still at Sophia, but had sent forward an advance column, which reoccupied Berkovtcha. Raouf Pasha opened a heavy fire on the Russian lines in the Schipka Pass; and Suleiman, having made all the preparations he could, and set the troops going, had returned to his command in the Quadrilateral.

Here, on November 19th, a determined attack was made by the Turks, fourteen battalions strong, under the command of Salem and Dilaver Pashas, to force the Russian positions extending from Pirgos to Trstenik, along the high-road from Rustzuk to Biela. The accounts of the action given by the Russians and the Turks differ, but it is easy to reconcile them. The Russians acknowledge that Pirgos was burned to the ground, and that the troops holding it had to retire to Metchka. On the other hand, the Russians stated that they threw the Turks across the Lom, and pursued them; and this is borne out by the Turkish statement that the Russians attacked Kadikoi, on the Rustzuk side of the Lom, but were repulsed.

The course of the action was as follows:—Salem Pasha advanced with his infantry from Lipnik, and crossing the Lom under cover of the guns of Sary Bair, fell upon Pirgos whilst the regular and Ciscassian cavalry, under Dilaver, advanced from Bazarbova and cut the lines between Trstenik and Metchka, thus enabling Ibrahim Pasha to carry the heights of Metchka until the whole of the 12th Russian division was launched against them, and forced them to retire back across the Lom, pursued in turn by the Russians as far as Kadikoi, where they at last effected a stand, and the Russians withdrew to their old positions. The attempt to break through the Russian lines was therefore a failure. Nor was the cannonade at the Schipka Pass productive of any result.

This was on November 19th. On the same day the news arrived in the Russian camp that Kars had fallen. Then there occurred one of those episodes so highly characteristic of military Christianity. A *Te Deum* was sung in the Tucenitza redoubt before Plevna, in the presence of the Czar, and the god of victories satisfied by full salvoes of shot and shell being hurled into the town. In the evening the victims were compensated for their wounds by a grand display of fireworks in honour of the event.



Meanwhile, pending the approaching doom of Plevna, the chief interest centred again round the operations of General Gourko. For the second time he crossed the Balkans to carry the war into Roumelia. He accomplished this operation in the same way as he executed his first march, and with much the same object. By almost unknown roads he secured the Hainkoi Pass, with the intention of turning the Schipka Pass. By equally difficult and scarcely known roads he secured the Etropol Pass, with the object of turning the Baba Konak Pass, and, after that, the Ginzi Pass. He failed in his intention at Schipka because he was not supported. But this time he had the assistance of General Schouvaloff, and a sufficient number of men to secure and hold the prizes he snatched away one after the other from the grasp of the Turks. Having secured the positions at Lazeni and Etropol, he at once continued his advance from Lazeni on Orkhanieh, and from Etropol by the cross-road leading to the northern entrance of the Baba Konak Pass. At the same time he advanced from Etropol by another path. This road—very little known, except to the Bulgarian herdsmen—branched off from the road leaving Etropol, and running to the northern entrance of the pass, curved round, *viâ* the village of Strigli, into the high-road south of the Baba Konak. And simultaneously he pushed forward along the road from Etropol to Zlatitza, and occupied the defiles leading to Kilissekoi and Zlatitza.

By this movement he turned two of the Turkish positions at the same time. Whilst the column advanced from Lazeni on Orkhanieh, the first column from Etropol was marching by the cross-road upon the northern entrance to the Baba Konak and to cut off the retreat of the Orkhanieh garrison, who, when attacked in front by the Lazeni column, and menaced in the flank by the Etropol column, had nothing left but to retreat across the Baba Konak and unite with the bulk of the forces south of Baba Konak, and concentrate between the villages of Gorni Komartzi, Strigli, and Dolni Komartzi. They were obliged to renounce any attempt at holding the pass itself, because of the existence of the road

leading from Etropol to Strigli, to which we have alluded, and could do no more than strongly intrench themselves in the angle formed by the junction of the high-roads from Orkhanieh and Zlatitza to Sophia and at Zlatitza itself. This movement also necessitated the abandonment of the positions at Lutakovo and Novatchin, and also at Liutibrod, the troops of which retired to the Ogaya Pass.

ning more or less parallel with each other, now over and along the heights, now in the valley, and more or less commanding each other. Kanitz made use of one of them, but his visit was too short to explore them all. At about four hours' march from Liutibrod, a path branched off southwards, west of Ignatitz, and debouched in the road from Novatchin and Lutakovo, just east of the Ogaya Pass, where the Turkish garri-

X—*The Ginzi and Baba Konak Passes.*

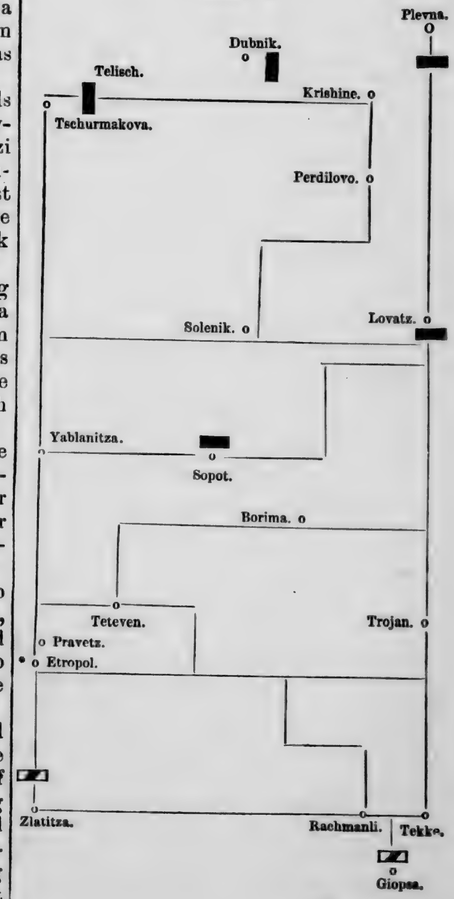
Now, referring to the accompanying sketch, which has been compiled from the Russian staff maps, the plans of General Gourko become singularly plain, and show to what an extent Sophia was threatened. At almost every turn the Turkish positions were outflanked. First of all, we find a path leading along the Isker, well known to the Bulgarian monks of the Tcherepis monastery. It was difficult but practicable, and splits up into a number of paths run-

sons from Lutakovo and Novatchin had taken up a position. Passing through the Isker Pass, the road, after this cross-path had been left behind, branched off westwards to Opletna, and southwards to Ogaya. From Opletna it ran almost due south to Lukovo and Sophia. From Ogaya, the cross-road curved round into this road, south-east of Korila, where the Turks had taken up a position with an advance guard on the road between Ogaya and Korila.

Now, still referring to sketch X, it will be seen that the Turks did not occupy any position on the Sophia-Opletna road. They, however, possessed one at the entrance of the Ginzi Pass on the road to Berkovtcha. But this pass was tapped, so to speak, in the very middle, by a path which curved round from Opletna and Metschopoliana. At the same time the Ogaya-Korila road was cut through by a road running from Vratshesh to Lukovo.

Along these roads the Russians pushed forward as the Turks retreated. They pierced through to the Isker Pass, where the Turks had occupied no position in any force. They advanced by the cross-road past Ignatitz, by the road from Novatchin, and by the road from Vratshesh, on the Turkish position at Ogaya. Thus the Ginzi Pass was threatened from Berkovtcha in front and by the Isker Pass column in the rear, whilst the Ogaya position was menaced from three sides likewise.

These columns, conducted by Generals Gourko and Rauch, were therefore carrying out a turning movement on the Ginzi Pass and Sophia, whilst General Schouvaloff was engaged in operating against the positions of Mehemed Ali at the southern debouchment of the Baba Konak Pass.



At this point there was also a turning movement in progress. Whilst the Baba Konak was threatened by the columns from Orkhanieh and Etropol, a third column was operating against Zlatitza, so as to gain the high-road to Sophia, and take the Turkish position in the flank at Dolni Komartzi.

With this general view before him, the reader will be able to understand the detailed operations of the Russians in their second passage of the Balkans, and their clearance of the Turkish forces from Bulgaria.

On November 16th, General Gourko started from Dolni Dubnik for Yablanitza, which he reached on November 18th, and immediate'y sent out *reconnaissances* to ascertain the strength of the Turks in the Sophia, Etropol, and Orkhanieh districts.

It soon appeared that the enemy had occupied very strong positions north of the village of Pravetz, four or five miles east of the Orkhanieh road. Here, before entering the valley of the Orkhanieh, it passed through a very narrow, crooked defile, between rugged mountains, whose sides along the road were so steep in most places, that a man unencumbered by arms, and not subjected to the fire of an enemy, would find it impossible to get up. To take such positions by an attack in front was clearly out of the question. It was absolutely necessary to turn them; and this General Gourko, with his experience of the previous passage of the Balkans, and knowledge of the strong and weak sides of the Turkish soldier, was all the more inclined to attempt. It was, however, no easy matter. A reference to skeleton sketch Y, however, will show by what roads General Gourko effected this operation, and also shows the roads by which Osman Pasha would have to effect his retreat if he succeeded in breaking out of Plevna.

Sketch Y.

The mountain paths, however, leading from Yablanitza, so far from being passable for artillery, as reported, were scarcely practicable for a man on horseback, and none but the hardiest riders with the surest-footed horses would think of climbing these steep, slippery paths without dismounting. Nevertheless, General Gourko resolved to make the attempt.

The Turkish positions were nearly all on the right side of the road. Although they had occupied the other side, they had constructed no redoubts, and dug no trenches there, judging correctly, that if they could hold the heights on the right side of the road, that would be quite sufficient to bar the passage. On this side they had constructed two small redoubts, encircled by mountains, every point commanding the defile with their formidable trenches. A glance at sketch X will show that the Sophia road at Pravetz turns abruptly west to Orkhanieh at right angles to its previous course. Just in this angle is a mountain ridge overlooking the road. This ridge the Turks had chosen for their positions; and it was by reaching and attacking the ridge from the southern side, that General Gourko determined to turn them. He accordingly despatched General Rauch, with the whole of the advanced guard, to execute this movement with the Simionowsky regiment of the guard, the first and second battalions of sharpshooters, one battery of horse artillery, and six squadrons of cavalry.

Rauch started from Yablanitza on the 21st, with orders to march all night, as the distance was only forty kilomètres by the map. It was expected he would arrive at noon next day, in time to attack. This was a grave miscalculation. Mountain roads cannot be measured on maps, or the distance should be estimated at twice or thrice that indicated, and the time required for a single horse to make it should be doubled or trebled for the march of an army encumbered with artillery. Rauch, instead of arriving on the 22nd at noon, only arrived on the evening of the 23rd. This, however, was the only miscalculation in the whole movement, and did not affect the result. His road was from Yablanitza to Vidrar, thence down the Mali or Little Isker to Kalugerovo, then up a little stream called the Pravetzka, to the rear of the ridge occupied by the Turks. The road was so difficult and so narrow in many places, that broad-track artillery carriage could only pass with one wheel over the side. They were only kept from tumbling over the precipices by the soldiers holding them by means of ropes passed round the wheels. The heavy munition waggons were worse still, and caused infinite trouble. Rauch, besides, found it impossible to march at night, owing to the dense fog which filled up the valleys nearly every night at that season of the year, and rendered travelling very dangerous, if not impossible.

Meantime, while Rauch was struggling on against these difficulties, General Gourko advanced to Osikovo (see sketch X), and waited for news of him with much anxiety before beginning demonstrations in front. His hope was to surprise the Turks, which could only be done by a rapid movement; but the day passed away, evening came, and with it word from Rauch that he had only got to Kalugerovo, still a long way from his expected destination. The attack would have to be given up for that day at least; but in the meantime General Gourko had not been idle. The Kuban Cossacks advanced along the road and drove the Turks from the hill in front of the main position on the right of the road. The Moscow regiment was sent to occupy the hills on the left of the road, opposite the Turkish positions, which they succeeded in doing with the loss of three or four men. One battery of horse artillery, and another of mountain howitzers, were also brought up and planted on the heights immediately overhanging the road opposite the Turkish works, and not more than one thousand yards distant; and another battery was planted to the right of the road, on the hill, at a distance of about two thousand yards from the nearest Turkish position. These were the only two batteries brought into action on the Russian side. They were put in position on the night of the 22nd, and opened on the Turks on the morning of the 23rd, when the fog cleared away.

The Turks answered but feebly as they had but two guns, and these were poorly served. They did not fire more than ten or fifteen times all day. These two batteries pounded away at the Turks. All day long sharpshooters kept up a lively fire, but there was no infantry attack.

At last, about four o'clock in the afternoon, Rauch's troops were suddenly perceived on the top of the high mountain and the other end of the ridge, on the range just where they were looked for, with the

Turks flying down the mountain side before them. Rauch had seized the key of the Turkish position with a loss of twenty-nine men. As this was the highest part of the ridge or range, it was impossible for the Turks to hold the positions attacked in the rear from the heights that commanded them. It was evident they were beaten, and only the approaching night and the fog prevented Rauch's troops from continuing their march along the ridge and attacking at once.

The Moscow regiment, on the left of the road, then began to descend the height into the valley near Pravetz, and the Turks on the heights on the other side of the road opened a spirited fire upon them; but as the object of the Russian movement was to turn the Turkish position from this side as well as the other, and as the plain was wide enough to get out of range of the Turkish fire, the Russians did not lose a man. They quietly occupied Pravetz, where they were likewise stopped by the fog and the darkness from joining Rauch and cutting off the Turkish retreat.

The Turks were thus surrounded on three sides. As was expected, they retreated upon Orkhanieh during the night, abandoning the whole position. They had enough men to protect their rear; but to judge by Rauch's easy victory, they did not fight as the Turks fought at Plevna, or the victory would have cost the Russians at least ten, or perhaps twenty times what it did cost them. The whole loss was only about sixty men killed and wounded.

If we were to judge of the victory by the loss of men it would be but an insignificant affair; but military events are not to be judged in this way. It was not exactly the passage of the Balkans that had been effected, as there was still a higher range before the Russians; nevertheless, there were several passes or places where a passage could be effected for making a turning movement, and the Turks had not troops to defend them all. It was only a question of time and weather; for these passes, though difficult, could be made passable if the weather permitted; and the weather still favoured the Russians, excepting the fog at night.

The Russians had thus gained the valley of Orkhanieh. Their advance guard was at Lazeni, between which and Orkhanieh the Turks had erected two redoubts. Detailing a force to watch these redoubts, General Gourko turned his attention to Etropol. The capture of this place was accomplished without loss, and by the same kind of movements, on a smaller scale, that gained the positions at Pravetz. The Turkish earthworks were constructed on the pointed mountains near the village; but there were left unoccupied the summits adjacent, which commanded the whole valley and the lower peaks, with the Turkish redoubts. To get possession of one of the highest mountains was the work of many hours for the Russians, who dragged up and planted cannon there by the aid of the Bulgarians, who brought their cattle along that were used to mountain work, and could climb where the Russian horses were helpless.

The first position was gained in a curious way. It was observed that the Turks did not stay in the earthwork, but, in perfect confidence that no one could climb the hill, left an outpost in the redoubt, and the main body remained in the camp back on the hill-side. Some volunteers started to climb the steep at four o'clock on the morning of the 23rd November, and reached the summit near the redoubt at half-past seven, carrying nothing but their rifles and ammunition. When they came within sight of the Turkish camp they were perceived by the Turks, who rushed immediately to occupy the redoubt. The Russians, comprehending at once the importance of first possession, strained every tired muscle to reach the coveted intrenchment before the enemy, and a curious race followed in dead earnest. But the Russians climbed the parapet and were inside just before the Turks arrived, and then the affair was settled in short order. The flanking movement first mentioned having been made, the Turkish force abandoned the town and the positions, and withdrew upon the Zlatitza Balkan to their fortifications between that place and Kilissekoi, leaving behind three Krupp guns. The next day the place was occupied by General Gourko, who transferred his quarters to it from Osikovo.

After the occupation of Pravetz, the Turks remained in force for two days at Orkhanieh and at Vratshesh, a village at the entrance of the pass, which they had fortified with a large and complete line of earthworks extending into the plain in front as far as Orkhanieh. When Etropol fell into General Gourko's hands, these defences of the entrance to the pass became immediately untenable, for Etropol lay within a dozen miles from the road behind Vrat-

shesh, and the Russians threatened to intercept the retreat from the latter place. Hence the Turks withdrew precipitately to the summit of the pass into their forts there. Thus, without anything more serious than skirmishes, General Gourko drove his enemy into their final positions, and proceeded to establish himself at once, parallel to his line of offence along the adjacent mountain tops. The commanding point of the Turkish position was the highest peak of the watershed, about three miles east of the summit of the pass, the largest redoubt occupying a point on the north-east. The line runs from here south-west to the highest point of the pass, just above the baiting station called Baba Konak, and was held by four earthworks. Between the road and the great redoubt and the two earthworks west of the pass, two ridges led up to the Turkish position from the north, and General Rauch established himself on the ridge to the east, while General Dondeville immediately occupied the other. Both joined their summits to the shoulders of the dominant peak; and even one part of this peak, the smaller of the three elevations which composed it, and which was debatable ground at the time of the attack on the earthwork, was seized by the Russians, and cannon planted there within half range of the great redoubt. General Dondeville occupied the line of heights parallel with the enemy's line, as far west as the precipitous descent, three kilomètres from the summit of the pass. Then the line turned north-west to the road, which it crossed to join that held by Count Schouvaloff on the opposite ridge. Several batteries of nine-pounders were placed in position along the Russian line and cannonaded the enemy's works almost continuously. General Rauch, whose guns were within 650 yards of the great redoubt, threw shrapnel alone.

The difficulties of bringing heavy pieces up the rough mountain paths, at the best scarcely practicable for horsemen, were overcome only by great energy and the severest toil. It is impossible to render full justice to the condition of these paths, gullied by torrents of mud and water, paved with loose boulders and slippery ledges, and mounting in zigzags often at an angle of 45 degrees. Four yoke of cattle, and from 150 to 200 men to the gun, were occupied two days and nights in making the ascent. The caissons had to be left in the valley, and the ammunition brought up by hand, 200 or 300 Bulgarians being employed in this work. The prevalence of clouds, which frequently covered the mountains with a chill, impenetrable mist, made bivouacs behind the lines anything but comfortable. Nevertheless, drenching vapour was preferable to the bullets and shells which fell into the camps whenever the air was clear enough to permit the enemy to see the low lines of intrenchments within half range of their rifles.

The Turks had but fifteen guns in position—less than half the number mounted by the Russians, and of much smaller calibre. They worked their guns, however, remarkably well. Except an attack on the great redoubt, there was but one engagement between the infantry, and that was fought on December 3rd, at Count Schouvaloff's position, west of the road. The Russian line here was so situated that it commanded Baba Konak, but at the same time did not occupy the highest point of the ridge.

The Turks began demonstrations, on December 3rd, from their two camps near the Baba Konak earthworks, about eleven o'clock in the forenoon, having meanwhile sent a strong detachment around behind the mountain that dominated the Russian right. This detachment shortly after appeared on the crest of the mountain, and charged in solid lines against the Russian sharpshooters. Count Schouvaloff had six guns planted on the highest point of his position, and the Turks came so near that he sent volleys of shrapnel into the solid masses with the greatest effect, causing them to break and scatter; but still they advanced with the cry of "Allah! Allah!" which was repeated by those in the camps all along the line, evidently to encourage the attack and to give the impression of great numbers. On they came within pistol-shot of the Russians, facing the staggering volleys from the Berdans and showers of shrapnel. At one time they were so near the guns, that those who were watching the fight from General Dondeville's batteries believed the pieces were taken; but the charging lines were seen to melt away and stream backward down the slope, and the first fierce attack was repulsed.

Again and again they assaulted with desperation. The Russian cannon were worked so quickly, that five out of the six pieces became heated and unserviceable, and there was no water for the sponges. The anxious

spectators on the opposite crests, unable to render assistance, believed the day was lost, when the hot cannonade dwindled down to sullen reports from a single gun, and the lines threw themselves against the very bayonets of the defenders of the ridge, with the cry of "Allah! Allah!" and the impetuous rush; but every time they came up they soon broke before the rifle-fire poured upon them by the Russians in their trenches, and retreated, falling by hundreds, while they were running back down the slope, and leaving at the close of the day, when they repeated the attempt to break the Russian lines, the mountain literally black with dead and wounded.

The Turks had a force variously estimated at from ten to twenty tabors. Prisoners reported that 1,300 men were *hors de combat*, including one pasha and two colonels. Count Schouvaloff held his line with two battalions of the Moskovisky regiment, and a small detachment of the Empress Tirailleurs. The Russian loss was about 300.

The attack was renewed again in the morning; but reinforcements had come up to the Russians, and the assault was not kept up long; but still the Turks kept their position close to the Russians, both lines having intrenched, not over 500 paces apart, conversation and the noise of men working being distinctly audible across the interval.

For the moment, all forward movements of the Russians stopped. The Turks still occupied Lutakova, a town at the base of the mountains north-west of Orkhanieh, and it was known that they were in force in the mountains there.

Until, however, the great redoubt in the Baba Konak Pass was taken, either by assault or by a flank movement, the further progress of the Russians southwards was effectually barred. But the Russians had learned to be cautious in attacking the Turks in fortified positions; and Turkish redoubts were to them especially disagreeable. Genearl Gourko, therefore, wisely determined to obey the strict orders given to him not to undertake any rash enterprises; and with his experiences in the Hainkoi Pass and the plains of Kezanlik and Eski Zagra, he was not at all sorry to be relieved from the risk of a repetition of those events.

The Porte, however, was highly dissatisfied with the result of Mehemed Ali's attack on December 3rd, and recalled him, appointing in his stead Chevket Pasha. The fact is, that Mehemed Ali, although a good organiser, does not appear to have been a good fighting general. Had he been associated with a man like Osman Pasha, the two together might have accomplished much. But as things turned out, neither was of any use to the other.

We will now leave General Gourko waiting for reinforcements. These soon came in abundant numbers, for within a few days Plevna was to fall and liberate the armies it had so long detained.

CHAPTER XXV.

THE FALL OF PLEVNA.

TOWARDS the end of November it had become amply apparent to every one, that as all attempts to relieve Osman Pasha had failed, the moment of his surrender or attempt to cut his way out of Plevna was rapidly approaching.

But, in truth, his position was hopeless. The Turkish armies in the Quadrilateral could not force the iron wall drawn across the roads to Plevna by the Czarevitch; Mehemed Ali, Raouf Pasha, and Chevket Pasha were unable to drive away the Russians from the Schipka or Orkhanieh passes; and in the extreme west there were the Servians panting to get at their old enemy who had faced them at Saitschar, and paralysed all their attempts to gain a footing on Turkish territory.

Still Osman Pasha determined to attempt to cut his way out, hoping to gain a start before the forces north, east, and south of Plevna, and try to gain the Balkans in the rear of General Gourko, when, in conjunction with an attack by Chevket Pasha, he might possibly succeed in passing the Orkhanieh or the Ginzi Pass.

The Russians, however, had become aware, by spies and deserters, that Osman was preparing for a sortie, and on their part made every preparation to receive him. The trenches were kept full of troops day and night, divisional and regimental commanders were advised to be on the alert, and all the posts were doubled and trebled. These measures were taken on Friday night (December 7th); but Saturday passed without any movement being discernible among the Turks.

Sunday (December 9th) passed in the same way. The Russians were anxiously on the watch with the usual amount of artillery fire, to which the Turks had not replied for a long time. For the last three or four days the weather had been damp and cold, with heavy broken clouds threatening rain, and about noon on Sunday the clouds thickened, and the dark masses discharged themselves in the first snow-storm of the season. By five o'clock the ground was quite white, and the appearance of the country had completely changed.

The sky was dark and lowering, but the atmosphere white with thickly-falling snow, through which could be caught glimpses of Plevna, with many little columns of blue smoke rising over it, telling of cooking dinners, and giving it a warm, cosy look, much unlike that of a beleaguered city. The huts of the Russian soldiers were soon white, the soldiers themselves going about joyously, some cooking their dinners, others gathering in groups, singing at the top of their voices a welcome apparently to the first snow-fall. Perhaps it reminded them of their far-away homes. There the snow had long since been many feet deep. Now and then the boom of a gun, muffled and indistinct like a low growl, broke the stillness as it came through the snow-laden air.

Across the ravine, at the foot of the Green Hill, where Skobeloff had built an excellent plank bridge, connecting his lines with Zotoff's and Radisevo, the lights of Brestovatz were barely discernible through the gloom; and here at Uzendol, Skobeloff's headquarters, everybody was keenly on the alert.

On Sunday evening a spy came in with the news that Osman had issued three days' rations to the troops, 150 cartridges, a new pair of sandals to each man, and that, to all appearances, the concentration would begin at once. A curious detail which he cited was, that each soldier received a small portion of oil for keeping his gun in order.

At ten o'clock another spy came in, who reported that Osman was concentrating near the bridge over the Vid. The spy had come direct from Plevna, and having given this information he disappeared again in the darkness. A few minutes later there was a telegram, stating that from the other side a great many lights were seen moving about in Plevna—an unusual thing. Evidently there was some movement on foot, and the spies were right.

The night wore slowly away. The snow-storm ceased, and was followed by dark clouds scudding swiftly across the sky, with now and then a blast of sleet. At three o'clock another spy brought news that the men of Skobeloff's command had a position on the side of the Green Hill, and that the Krishine redoubts were being abandoned. He was very sure, he said, that all the positions along Skobeloff's side would shortly be abandoned. Would he go along and lead the way into the Krishine redoubts, at the risk of being bayoneted, if his words should not prove true? Yes, he would; and orders were given by Skobeloff for the troops to begin to move cautiously forward, and feel their way with care. This was done, and the positions were taken.

At last it was certain that the Turks were moving, and that the final decisive moment had come. Skobeloff ordered the captured positions to be instantly placed in a state of defence, in case the Turks, repulsed and not yet ready to surrender, should attempt to re-capture them. The grey light of morning came. It was cloudy, and threatened more snow. Suddenly there was the booming of thirty or forty guns speaking almost together, followed instantly by that steady, crashing roll the Russians had learned to know so well. The battle had begun. The giant, after defending himself four months, hurling thunderbolt after thunderbolt upon his enemies, was struggling through the meshes he had allowed to be thrown around him, and was, in his turn, attacking the trenches and earthworks which he had taught his enemies so well how to defend. It was in the direction of the bridge over the Vid, on the Sophia road, that Osman had decided to break through. Here the country behind Plevna was a wide open plain, into which the gorge leading up to Plevna opened out like a tunnel. The plain was bounded on the Plevna side by steep rocky bluffs, or cliffs, along whose foot flowed the Vid. From these cliffs, for a

distance of two miles, burst here and there, in quick, irregular succession, angry spurts of flame, that flashed and disappeared and flashed out again. Through the covering of smoke could be seen angry spits of fire thick as fire-flies on a tropical night. Now and then, through an irregular curving stream of fire were bodies of men hurrying to and fro, horses, cattle, carriages running across the plain, and, above all, the infernal crashing roll of the infantry fire, and the deep booming of more than a hundred guns.

Osman Pasha had, during the night, abandoned all his positions from Grivitza to the Green Hill, and concentrated the greater part of his army across the Vid, over which he passed on two bridges, one the old, and the other the new one lately constructed. He took part of his artillery, some three batteries, and a train of about 500 or 600 carriages drawn by bullocks. He succeeded in getting his army, the artillery, and part of the train over by daybreak. The Russians said, that to have started with so large a train, is a proof that he was deceived with regard to the number of the Russian forces, and that he believed the Russian line, owing to the absence of General Gourko, was very weak on the Sophia road, and thought another road along the Vid was virtually open. But this train was taken to serve a special purpose in the fight. Indeed, the first thing the Russians perceived when daylight broke was a line of waggons drawn by bullocks, advancing upon them in close order across the plain. The smooth open level offered every facility for such a manœuvre. The Turks were behind these waggons, which, piled full of baggage and effects of various kinds, afforded very fair protection from bullets.

The attack was directed against the positions held by the grenadiers, north of the Sophia road, whose lines extended from the road to a point opposite Opanes, where they were joined by the Roumanian curving line through Susurla.

The Turks advanced as far as they could under cover of their waggons, while the Russians poured in a terrible fire on them from their Berdan breech-loaders, scarcely less destructive than the Peabody, and opened on the advancing line with shell and shrapnel. The Turks then did a splendid piece of bravery, only equalled by Skobeloff's capture of the two famous redoubts. Probably finding their cover beginning to fail them, owing to the cattle being killed, getting frightened, and running away, they dashed forward with a shout upon the line of trenches held by the Sibrersky or Siberian regiment, swept over them like a tornado, poured into the battery, bayoneted the artillerymen, officers and men, who, with desperate heroism, stood to their pieces to nearly a man, and seized the whole battery. The Sibrersky regiment had been overthrown and nearly annihilated. The Turks had broken the first circle that held them in. Had they gone on they would have found two more; but they did not have time to go on, for the Russians rallied almost immediately; whilst General Strukoff, of the emperor's staff, brought up the first brigade of grenadiers, who, led by their general, flung themselves on the Turks with fury. A hand-to-hand fight ensued, man to man, bayonet to bayonet, which lasted several minutes, for the Turks clung to the captured guns with dogged obstinacy. They seemed to have forgotten, in the fury of battle, that they had come out to escape from Plevna, and not to take and hold a battery, and they held on to the guns with almost the same desperation which the Russian dead around them had shown a few minutes before. Nearly all the Turks in the battle were killed. Those in the flanking trenches open to the Russian fire had, of course, very little shelter, and were soon overpowered, and began a retreat which, under the murderous fire sent after them, instantly became a flight. Some took shelter behind the broken waggons, and returned the fire for a time, but the majority made for the deep banks of the Vid, where they found ample shelter from the Russian shells and bullets. They formed there behind the banks, and instantly began to return the Russian fire.

By this time it was about half-past eight, and the Turkish sortie was virtually repulsed; but the battle raged for four hours longer. The losses inflicted from this time forward were not great on either side, for both armies were under cover. The Turks were evidently apprehensive that the Russians would charge and drive them back in a mass into the gorge. The Russians were resolved to prevent another sortie, and so both sides kept it up. Indeed, there seemed at first every probability that the Turks would try it again, though it was evident to any one who knew the strength of the Russian lines and had seen this affair, that escape was hopeless from the

first, even though Osman Pasha had had twice the number of men.

About twelve o'clock the firing began to diminish on both sides, as if by mutual agreement. Then it stopped entirely. The rolling crash of the infantry and the deep-toned bellowing of the artillery were heard no more. It had not ceased more than half-an-hour when a white flag was seen waving from the road leading around the cliffs beyond the bridge. Plevna had fallen, and Osman Pasha was going to surrender.

A long, loud shout went up from the Russian army when the white flag was seen, and its significance was understood—a joyous shout that swept over that dreary plain, and was echoed back sonorously by the sullen, rugged cliffs overhanging the scene. The thrill of gladness in the shout showed how deeply the Russian soldiers had dreaded the long, weary waiting through the winter months amid snow and mud round this impregnable stronghold. It was clear that a load had been lifted from every heart.

A moment later, a Turkish officer was seen riding over the bridge with a white flag in his hand. He rode forward to General Ganetsky, in command of the grenadiers, halted a moment, and then rode back. As it turned out, he was an officer of inferior rank, and returned because General Ganetsky instructed him to send an officer with the rank of pasha to negotiate the terms of capitulation. Then thirty or forty officers and correspondents, headed by General Skobeloff, who had been placed on the Sophia road, rode down the road towards the bridge, within point-blank range of the Turkish rifles, if the Turkish soldiers grouped in masses on the road behind the bridge on the cliffs overlooking the Vid had chosen to open on them. About fifty yards from the bridge, and seventy-five from some masses of Turks on the other side, they halted. General Skobeloff and two or three other officers waved white handkerchiefs. This signal of amity was answered by the waving of a piece of white muslin, about two yards square, attached to a flag-staff. Then two horsemen came forward, each carrying a white flag. They rode across the bridge and approached the Russian group. There was a moment's conversation with Skobeloff's interpreter, and then it was announced that Osman himself was coming out, and the two horsemen galloped back.

"Osman himself coming out!" exclaimed all with surprise.

"At any rate we will give him a respectful reception," exclaimed one Russian officer, in the gallant spirit of true chivalry.

"That we will," said another. "We must all salute him, and the soldiers must present arms."

"He is certainly a great soldier," exclaimed another, "and he has made an heroic defence."

"He is the greatest general of the age," said General Skobeloff, "for he has saved the honour of his country. I will proffer him my hand and tell him so."

All were unanimous in his praise, and the conversation was kept up about incidents of the siege, till it was interrupted at last by shouts of "There he is! He is coming!" Two horsemen were again approaching with a white flag, the bearer of which was apparently merely a common soldier. He wore a fez, a long dirty brown cloak, and very ragged foot-gear. The other horseman wore a bright red fez, which set off the officer's blue cloak. He was clean and natty, and had on fresh gloves. He was comparatively young, with a round, rosy face, clean shaved, light moustache, straight nose, and blue eyes. He did not seem over thirty-five years old.

"This cannot be Osman Pasha," was the general exclamation. In fact it was not he, but Tefik Bey, his chief of staff. Was it possible that this boyish-looking face belonged to Osman's right-hand man, who must have played so great a part in the organisation and maintenance of Osman's mighty defence? It seemed strange, but it was true. The Turks have the merit at least of not being afraid of young men. There was not one tottering grey-bearded officer in this captive host. Every one saluted as Tefik Bey rode up. He halted for a moment and was silent. He then spoke in French with good accent, and said, "Osman Pasha"—then he stopped fully ten seconds from his emotion before he proceeded—"is wounded."

This was the first intimation the Russians had had of this occurrence.

All expressed their regret.

"Not severely, we all hope?" exclaimed General Skobeloff.

"I do not know," was the answer, with a pause of a second between every word.

"Where is his Excellency?" was the next question.

"There," was Tefik Bey's reply, as he pointed to a small house overlooking the road just beyond the bridge.

Then there was a pause while the Russians scrutinised their strange visitor, and he surveyed them with the most perfect calmness, but obvious curiosity. The pause became embarrassing. The Turk showed no hurry to speak, and the Russians evidently felt delicacy in asking if he had come to surrender; besides which, there really was no officer there who had the right to treat with him. The situation was critical, and, if it possessed an amusing element, was also embarrassing. Both armies were watching the little group not more than 500 yards apart, with arms in their hands, for the Russian infantry had gradually moved down toward the bridge. Finally, General Skobeloff stammered out, "Is there anybody you would like to see?—[pause]—With whom did you wish to speak?—Is there anything——?—[pause]—What the devil is the matter with the man? Why don't he speak?" blurted out the general in English, turning to one of the correspondents of the *Daily News*. Tefik Bey remained impassive.

"General Ganetsky is in command here. He will be here presently, in case you should like to speak to him," General Skobeloff finally observed. Tefik Bey simply nodded.

"Osman Ghazi has made a most brilliant and glorious defence," said an officer. "We esteem highly his soldierly character."

The Turk gazed steadily before him, and gave no sign that he had heard.

"We look upon him as a very great general," said another. No answer. The Turk's eyes were bent in the direction of Sophia, as though looking for Mehemed Ali Pasha. There was evidently no use trying to converse with this obstinately silent man, and they gave it up. Fortunately, General Strukoff, of the emperor's staff, soon arrived, with powers to treat. He asked Tefik if he had authority from Osman Pasha to negotiate. It appeared not; and the final result was that Tefik bowed and galloped away back across the bridge. Presently General Ganetsky arrived; and the little group, led by Generals Ganetsky and Strukoff, advanced across the bridge towards the little hut where Osman Pasha lay wounded. The officers waited outside, whilst Strukoff and Ganetsky went in to arrange the terms of capitulation.

The terms of capitulation were easily arranged. The surrender was unconditional. Osman consented at once. If surprise be expressed that he should have so suddenly agreed, it is only necessary to state that he could do nothing else. In order to attempt a sortie, he had to abandon all the positions in which he had defied the Russians so long, and to concentrate his army down on the Vid. These positions once lost were lost for ever, because the Russians occupied them almost as soon as he left them. He was down in the valley; they on the surrounding hills, with an army three times as large as his. He had to surrender without delay, for they were drawing the circle tighter every moment. His position was like Napoleon III.'s at Sedan. The disparity in numbers was greater, and he had not even the shelter of the village. So Osman Ghazi the Victorious surrendered, unconditionally, the gallant army with which he had held the famous stronghold for so long, with which he upset the whole Russian plan of campaign, and with which he defeated, in three pitched battles, Russia's finest armies.

The terms of surrender having been settled, Osman Pasha got into a carriage and drove off towards Plevna. But he had not gone far before he heard that the Grand Duke Nicholas had arrived at the bridge, and turned back in his carriage to meet him. Osman Pasha was escorted by fifty Cossacks, and there followed him twenty-five or thirty Turkish officers, all mounted on diminutive Turkish ponies. They were all, or nearly all, young men. Scarcely one among them seemed over thirty. Most had the faces of mere boy-students. These were the lads with whom Osman Pasha had accomplished such wonders! The grand duke rode up to the carriage, and, for some seconds, the two chiefs gazed into each other's faces without the utterance of a word. Then the grand duke stretched out his hand, and shook the hand of Osman Pasha heartily and said—"I compliment you on your defence of Plevna. It is one of the most splendid military feats in history." Osman Pasha smiled sadly, rose painfully to his feet in spite of his wound, bowed, and expressed his acknowledgments, and then re-seated himself. The Russian officers all cried, "Bravo! Bravo!" repeatedly, and all saluted respectfully. There was not one among them who did not gaze on the hero of Plevna with the greatest admiration and

sympathy. Prince Charles, who had arrived, rode up, and repeated unwittingly almost every word of the grand duke, and likewise shook hands. Osman Pasha again rose and bowed, but this time in grim silence. He wore a loose blue cloak, with no apparent mark on it to designate his rank, and a red fez. He was a large, strongly-built man, the lower part of his face covered with a short black beard, without a streak of grey. He had a large Roman nose, and black eyes. The face was a strong face, with energy and determination stamped on every feature—yet a tired, wan face, also, with lines on it that hardly were graven so deep five months ago; and with a sad, enduring, thoughtful look out of the black eyes.

"It is a grand face," exclaimed Colonel Gaillard, the French military *attaché*. "I was almost afraid of seeing him lest my expectation should be disappointed; but he more than fulfils my ideal."

"It is the face of a great military chieftain," said young Skobeloff. "I am glad to have seen him. Osman Ghazi he is, and Osman the Victorious he will remain, in spite of his surrender."

There may, perhaps, have been some personal exaggeration in the Russian estimate of Osman Pasha. History will judge. But, thrilling with the impression of the great military event just accomplished, the magnificent defence ending in a halo of disastrous glory, there was not one who did not echo Skobeloff's words. Be it remembered that Osman Pasha cannot be judged on ordinary military rules, for the reason that he had not a regular army; technically speaking, not an army at all, but a mob of armed men, with scarcely any organisation, with no discipline, save the natural and passive obedience of the Turkish peasant, and only such military education and experience as were gained in the trenches and on the battle-field. This is the highest form of generalship—to accomplish mighty results with means which most military men would have regarded as hopelessly inadequate. Osman Pasha had scarcely any officers of talent and experience with him. He had borne the weight of this stupendous defence on his own shoulders—a very Titan, defying, with his untrained and scanty levies, the serried legions of one of the greatest military powers of Europe.

After his meeting with Osman, the grand duke rode on to Plevna. By the time the Russians entered the town it was nearly dark, and it presented a most miserable, wretched appearance. Not that there were any ruins to contemplate, for the Russians did not probably throw above a dozen shells into this part of the town during the whole time of the siege—but narrow, crooked streets, a foot deep with thin liquid mud, in which thousands of men and horses were wandering about without knowing where to go, and without any object; lean, cadaverous-looking inhabitants, who stood outside their doors, and saluted timidly, as though not quite sure that the Turks might not yet come out and catch them at it, and looking in the gloaming more like spectres than anything else; houses in which were seen no lights nor fires, cold, comfortless, and deserted, made up a scene that, in the gathering darkness of a bleak December evening, was dreary and depressing in the extreme. Whilst General Skobeloff was riding through the streets on the way to his old quarters on the Lovatz road, he met Tefik Bey, Osman's chief of staff, the same who had come over the bridge with the white flag. He had become separated from Osman, and was wandering about with his escort through the muddy streets, nobody seeming to know where to take him or where to go. General Skobeloff immediately invited him to dine and pass the night at his head-quarters on the Lovatz road. Tefik Bey at first hesitated, as he thought he ought to endeavour to join Osman; but nobody knew where Osman was. It seemed then probable that he had accompanied the grand duke to Bogot; and, at any rate, if he were in Plevna, the task of finding him might be one of hours in the darkness; so that General Skobeloff's persuasions, joined to those of Colonel Gaillard, whom Skobeloff had likewise invited, finally prevailed.

They then proceeded on their way up the Lovatz road, and passed under the two redoubts taken by Skobeloff in September, at last silent and deserted, up across the Green Hill, across the labyrinth of trenches and works where, only twenty-four hours before, the Turks and Russians were still standing foot to foot and bayonet to bayonet. All now was silent and lonely. Arriving on the top of the hill, a short gallop brought the party to Uzendol, General Skobeloff's head-quarters.

A warm fire burning gaily in his mud hut, a glass of vodka, and some hot soup

at once thawed their benumbed hands and feet, and they were soon enjoying a hot dinner, with the appetites of men who had been in the saddle since daylight, with not a morsel to eat. Tefik Bey seemed much depressed and downcast. He spoke little, and was at first almost as taciturn as he had been on the bridge. He brightened up, however, as the meal progressed, drank a glass of red wine, a glass of sherry, and a couple of glasses of champagne, when General Skobeloff proposed the health of Osman Ghazi, and drank to the brave defenders of Plevna. A merry smile broke over his face when Skobeloff asked him who had commanded the Turks on the Green Hill, and then it occurred to him, for the first time, that his entertainer was Skobeloff, the indefatigable, restless, daring spirit with whom he had exchanged so many hard blows on the Lovatz road and Green Hill. Nobody had mentioned Skobeloff's name in his presence, nor had Skobeloff told him who he was; but the fact that he had come out of the Lovatz road, together with Skobeloff's question about the Green Hill, was quite enough to enlighten him. So he said, with a smile, "Ah, it is you who gave such tough work on the Green Hill all this time. You are General Skobeloff." Skobeloff laughed, and said, "Yes." "That was a very good attack of yours that evening in the fog and darkness. Very well done. But you did not get it all." "No," said Skobeloff, "I did not want it all." And they both laughed. But, after this momentary fit of sunshine, Tefik Bey soon again relapsed into melancholy and gloom. It was partly the despondency and sadness natural under the circumstances, partly the reaction on the extreme excitement and tension of nerves during the last few days when preparing for the sortie, and partly extreme lassitude and fatigue. The others had hardly swallowed their coffee, when Skobeloff, taking pity on him, turned them all out, gave up his bed to Tefik, had another hastily made up for Colonel Gaillard, and then retired and passed the night in a hut of one of his officers; and so ended this eventful day of Plevna.

The state of the town and its immediate vicinity after the Russians had entered it, gave a terribly graphic account of the misery which had long reigned there.

When the Turks made the sortie, they were obliged to leave the sick and wounded, of whom there were thousands, entirely without attendants. There was never a regular hospital in Plevna, the sick being transported to Sophia; and the small ambulance corps was at all times insufficient to care for the wounded, even before the town was surrounded. Of course, the attendants at the hospital were ordered to accompany the army when the sortie was made, and they joined their lot with those who tried to break through the Russian lines. The day and night of the battle passed, and the sufferers received no food or water, and their festering wounds were undressed. The following morning the Russians entered and took possession, and made the day one of rejoicing with the visit of the Czar and the imperial staff; but this celebration of the event, however short it may have seemed to the victors, was a long season of horrible suffering for the wretched helpless captives, who stretched their skeleton hands in vain towards heaven, praying for a bit of bread or a drop of water. Neither friend nor foe was there to alleviate their sufferings, or to give the trifle needed to save them from a painful death, and they died by hundreds; and before the morning of the third day the dead crowded the living in every one of those dirty, dimly-lighted rooms which served to shelter the wounded from the cold and wet, but confined them in a foul and fœtid atmosphere of disease and death.

It was only on the morning of the *third* day after these wretched, tortured creatures had been left to their fate, that the Russians chose to find opportunity and means to begin, first, the separation of the living from the dead, and then the care of the former. The mosques, the largest houses, and many of the small dwellings had been filled with sick and wounded. Overcrowded in every case, and, from the first, without proper attention, these temporary hospitals were, at the best, most filthy and pestilential, and the air was tainted with the stench of undressed wounds, and the corpses which lay unburied in the courtyards.

The first room entered in one of these charnel-houses contained ninety odd Turks. Of these, thirty-seven were dead, and many others on the point of death. Piteous groans came from between rigid lips, and painful cries for water, and some made feeble signs for food. One or two of the strongest raised themselves, and fixed their hideous, sunken eyes with such a beseeching

stare on those who had come to free them from the company of the dead, that it would have softened the hardest heart. The small room, dimly lighted by a high window with one pane of glass, was crowded with forms of thirty or forty ragged, filthy, human beings. Many of these forms were motionless, and scarcely audible groans were heard from one or two who raised with difficulty their bony hands to their lips, to signify their need of food. There were faint whispers of "Some water! some water!" piteous to hear. The dim light was concentrated on the half-naked body of an old man stretched across the entrance, whither he had dragged himself in the last hours of his agony in hope of succour, or at least of a breath of fresh air; for, in the unventilated room, the air was thick with putrid odours, which burst out when the door was opened, overpowering strong men, and causing them to turn sick and faint. The old man's hands were clutched in the rigour of painful death on his nude and meagre breast, and his head lay against the very crack of the door, so that it opened only by rude force. Living and dead were lying together undistinguishable along the walls, behind the door, and under the window.

This room was one of fifty where a similar spectacle was presented. The pavement of the mosques was covered with crouching forms, some moving at intervals, others motionless and silent. Here and there the faces of the dead came out in ghastly relief, with a fixed expression of great agony.

Nothing was done but to drag the dead from among the living, let in the light and air, and give water and nourishment in hope of saving some of those who remained alive. Small enough was the force of men who set about this painful task, and meagre enough their means. *Three* open peasants' ox-carts were all that were available for the removal of the dead, and fifty soldiers to carry the bodies from the rooms to the carts, and bury them in the ditches. As fast as possible, bread and water were distributed, and the feeble wretches fought each other with their last breath in their greed for the nourishment. Some, propped up against the wall, slowly ate until the unmistakable pallor came over their faces, and their eyes were fixed in death. Even the effort of eating the long-needed food was too great for their waning strength. The living clutched at the remaining morsel in the dead man's hand, struggled for it with all their feeble power, and cursed each other and wrangled over the spoil, but to fall dead themselves before they could eat the bread.

The three open oxen-carts began the removal of the dead at once. The hospitals daily supplied more freight of this kind than the slow-moving teams could carry away to the ditches outside. The disinfection of the hospitals was promptly effected. As fast as possible, with the small force of men at hand, the rooms were emptied one after another. After a day or two, some of the Bulgarians were compelled to serve in place of the soldiers, and they set themselves about the hated task with a brutality terrible to witness. They dragged the bodies down the stairs by the legs, the heads bumping from step to step with sickening thuds, then out into the court through the filthy mud, where they slung them into the cart with the heads or legs hanging over the side, and so continued to pile up the load with a score of half-naked corpses.

It was horrible to hear the conversation of the men who did this work. They perhaps brought out a body still warm, the heart still beating, and the flush of life on the cheek. One would say, "He is still alive," and propose to leave him without stopping to decide the question. The others would cry, "Devil take him! He will die before to-morrow, any way. In with him." And so the living went in with the dead, and were tumbled into the grave. When the three carts were full, they started away through the streets toward the ditches outside the town. The horrible load jolted and shook, and now and then a body fell out into the mud, and was dragged into the cart again, and thrown down and jammed in firmly to prevent a recurrence of the accident. This heartless proceeding went on in the public streets, crowded with the men, women, and children of the place, the soldiers, the wounded and the sick; and after so many days of the same spectacle, no one any longer paid attention to the transport of the dead.

The care of the sick and wounded was now rapidly systematised. The few Russian doctors that were detailed for the service worked very hard, and also the Turkish surgeons who remained; but the corps was not one quarter large enough to properly attend to the patients. Some

of the hospitals were light, airy, and well purified; but the mosques were still dark, foul-smelling, and crowded. The dead lay for many hours unattended, and the horrible sights and sounds defied description. In the midst of this, the few Russian Sisters of Charity moved about quietly, busy from daybreak till dark, bringing comfort to hundreds, whose wounds they dressed, and whose pains they alleviated.

This is but a slight outline of the scenes that passed in Plevna for days. A long detailed account alone could give anything like an idea of the climax and final act of the drama of Plevna. The town was full of similar pictures. Along the streets were frequently seen one or two wounded who had crawled out from the hospital, and lay dying in the mud. There was no valid excuse for this wilful disregard of human life. The cause is evident—namely, lack of system. The Russians knew that Plevna must fall, and they expected to find thousands of starving men there, and thousands of badly-attended wounded. The exact date of the surrender must have been, as it probably was, a surprise; but the day before the expected event was not the time to prepare for it. There should have been detailed, long before, proper officers to prepare everything for the care of the surrendered troops. There can be no excuse for the fact that only three open ox-carts were found to transport the dead, and only a score of Bulgarians who ran away at every opportunity, to perform the duty of burying the dead. Out on the plain, near the bridge over the Vid, were bivouacked 15,000 or 20,000 prisoners, fighting for bread, miserable beyond description, in the cold, with hundreds of unburied dead covering the ground near the spot where the first attempt was made to break through; and day after day passed, and their condition did not change, simply because there can be nothing like prompt attention in similar cases where there is no idea of system. The story of the hospitals, of the prisoners, and of the Russian disasters, all hang on one thread.

But the horrors of Plevna were not all in the town. Some were in the valley of the Vid. In the redoubts which the Russians stormed, hundreds on hundreds of still unburied bodies lay; the whole ridge of the wooded mountain, the valley beyond, and the hill further on where stood the two redoubts overlooking the town, taken with terrible loss by General Skobeloff on September 30th, were still strewn thickly with the corpses of the Russians who fell on the occasion. Some of these bodies had been partly covered with four spadefuls of dirt, but most of them lay as they fell. Not all as they fell, for the dogs had torn away the limbs of many, and the birds of prey had pecked at the skulls. In the pools of water lay corpses half decayed; pale, withered hands and feet stuck out of the soil on all sides; and horrible, dead, mummified faces stared at one from every little hollow in the ground, and from among every clump of bushes. Some of these bodies had been put in graves within a day or two; but still the whole region was strewn thickly with these dreadful mementoes of the fight there nearly three months before.

Around the redoubts the ground was furrowed and dug with thousands of shells, and tons of pieces covered the earth. It was interesting to observe how few shells went into the redoubts, or struck the edge of the redoubts. The majority plunged into the ground just in front. The Turks built great traverses across the redoubts, and under these dug deep bomb-proof shelters, where they were as safe from harm from the shells as in Constantinople; but the whole surface of the hills was literally riddled with holes large enough to bury horses in, and all about lay great unexploded shells. Even away back in the ravines, where the soldiers' huts were, bullets, fragments of clothing and equipments, covered the ground; in short, Plevna and its vicinity was one vast charnel-house.

CHAPTER XXVI.

RESULTS OF THE FALL OF PLEVNA.

WHEN an adjutant brought the news of Osman Pasha's surrender to the Emperor Alexander, with the words, "Plevna lies at your majesty's feet," the Czar replied, "But the war is not yet at an end!" and complimented Generals Todleben, Imeretinski, and Ganetzky with the words, "This is entirely due to your exertions, and especially to thine, Edward Ivanovitch (Todleben")."

On the following day the Czar made his triumphal entry into the City of Horrors, and received Osman Pasha whilst at breakfast in the house of a wealthy Bulgarian. He restored his sword to Osman Pasha whilst complimenting him on the stubborn defence he had made, and appointed Charkow as Osman Pasha's place of residence during his captivity. Here he was made as much of as though he had been victorious; and victorious he really was, when it is considered that he had done more than the whole of the Turkish generals combined to oppose the progress of the Russians. From July 19th to December 10th he had held Plevna, and cost the Russians at least 30,000 men, besides keeping the whole of their active army in check. He did not surrender until his supplies were exhausted, and a loss of 4,000 men proved to him that all hope of escape was vain.

No less important to the Russians was the fall of the stronghold. Their immediate gain was ten pashas, 2,000 subaltern officers, 128 staff officers, 36,000 men, 1,200 horses, and 77 cannon. But the indirect gain was the greatest of all. Not only did the fall of Plevna set free the whole of the Russian and Roumanian armies, but it also liberated the Servian army which had been kept in readiness to fall upon Widdin and Osman Pasha's army in the rear, should this appear necessary. Had Osman Pasha, at any moment, succeeded in escaping from Plevna, there can be no doubt, that if he had taken the route towards Widdin, he would have been met by an army of 20,000 Serbs, with the Roumanians on his right flank, and the Russians in his rear.

Much speculation was indulged in, at the time, as to the course the Russians would pursue. Some critics imagined that General Todleben would insist upon the Quadrilateral being cleared before proceeding across the Balkans; others held that fear of England would keep the Russians from marching upon Constantinople; but the great majority held that the Turks would concentrate their forces round Adrianople, convert it into a second Plevna, and, if ousted from this position, fall back upon the Tchataldja lines in front of Constantinople.

But neither of these plans were adopted. The moment Plevna had fallen the interest in the campaign ceased to be of a predominatingly military interest, and became one of political interest chiefly. It was clear that the disruption of Turkey had commenced, however it might be disguised under the names of autonomous, feudatory, tributary States, frontier rectifications, or protectorates. Turkey had practically ceased to exist when Osman Pasha was sent into captivity in Russia; henceforth the battle was between those powers whose interests were involved in the fate of Turkey.

First and foremost in this struggle was, of course, Great Britain. Secondly, there was Austria. Thirdly, there was France. Then came Italy and the minor States, Greece, Servia, Montenegro, and Roumania. The interests of all these States were, however, eclipsed by those of Great Britain; and for many weeks after the fall of Plevna, all the world was on tenterhooks, waiting for the decision to be taken by the British government. There were abundant counsels proceeding, chiefly from Germany, but also from France, to the effect that England should draw the sword—if not in favour of the Turk, at least against the Russians; and naturally, nowhere was this more desired than at the Porte.

But not only were there insuperable difficulties which prevented the British government from actively interfering on behalf of the Porte, but it was not to be thought of for a moment, seeing that the end of Turkey had been decreed. British interests were no longer centred in Turkey

as an empire; they were centred in Turkish territory.

Bolstering up the Sultan would simply mean leaving things just as they had been, with an enormous additional influence of Russia upon the course of Oriental politics. As long as Turkey remained in this equivocal state of semi-independence, both Russia and England met on the same ground of ostensible benevolent wishes towards the Porte. That was a fiction which would have to be destroyed. It was absolutely necessary to separate British interests from Turkish interests, and also to separate Russian interests from Turkish interests. As long as Turkey was regarded as a fully independent State, with its conglomeries of tributary States and provinces, the Russians could always say to England, "Why should we disagree? We both of us wish to sustain Turkey; we both wish the Ottoman empire to hold the territory neither of us desires the other to have; and we both of us only desire that the Christian subjects of the Porte should not be oppressed. Our interests are, therefore, identical. Why should we quarrel then?"

Herein lay the absurdity. British and Russian interests in Turkey were far from being identical—they were, in fact, diametrically opposed. But it was impossible to deny any of the above statements taken singly, or to dispute the logic of the whole as a statement, as an assertion. It all depended upon the truth of the Russian assertion, that the above interests were the real ones, and not the cloak to other designs. But to ascertain this for certain, it was necessary to force Russia's hand, to oblige her to follow suit, and play out her trumps.

To accomplish this, it was also necessary to do one of two things. Either for England to lead trumps at once, or let the Russians go on till they had nothing but trumps in their own hands, and would be forced to lead themselves.

Unfortunately, the British government, owing to agitation at home, and the incongruous elements in the cabinet, decided to adopt the latter course, and force the Russians to lead the trump card.

This trump card was Constantinople. The British government had declared that England could not afford to see Constantinople menaced or occupied by the Russians without taking steps to secure her own interests in the East. On the other hand, so long as the Turkish government remained intact in Constantinople, and replied to all proposals for peace with a *non possumus*, the Russians could not wait about outside the gates, at the good pleasure of the Porte, and refrain from dealing the *coup de grace*. They were obliged to bring the war to an end somehow or other; and there was no other way of doing so than by striking at head-quarters, and at least isolating the capital completely from the rest of the country.

This was evident to all concerned; and towards the middle of December, 1877, the advice was given to the Porte to save as much of its armies as possible, and fall back upon the defence of Constantinople and the lines of Tchataldja only. At first it had been intended to make a stand at Adrianople; but it was pointed out to the Turks that such a policy could only delay the crisis, and increase their difficulties without any corresponding advantages. Sir A. Layard insisted that it would be impossible for England to interfere on behalf of Turkey only. She could only do so if her own interests were menaced. That case would not occur until the capital was menaced. Hence the best method to enlist such sympathies and gain such assistance as England was able and willing to give, would be by allowing the Russians—nay, forcing them—to advance on Constantinople itself. Then the moment for British interference, as foreshadowed by Lord Derby, would arrive, and the question no longer be one between the Porte and the Russian government only, but between England and Russia.

To this view the Turkish government gladly subscribed, and were delighted at the prospect of British intervention in whatever shape it might be presented. They at once signified their readiness to accede to the proposal, and gave the necessary orders.

All this occurred between December 15th and December 20th. As early as that, the future policy of the Turks, as carried out to the conclusion of peace, was definitely settled in its broad outlines, as was pointed out at the time in an article published in the *Examiner*, entitled, "A Bold Project." This article appeared on December 22nd, and ran as follows:—

"A plan of campaign, as much of a political as of a military character, has been communicated to the Turkish authorities, and has apparently been accepted by them. Into the origin of this plan, interesting as the inquiry might be, it is scarcely necessary to examine. In whatever fertile brain it

may first have arisen, its suggestion to the Turkish government removes it from the field of fanciful imagination to the practical range of accomplished facts. Nor does it much signify what motives dictated the proposal of this plan. Such motives can be imagined as being of diametrically opposed natures. And equally diametrically opposed may be the possible results. What the actual result may be, will depend upon the energy with which the plan is carried out by the one party, or turned to advantage by the other.

"The original idea of this plan is based on the conviction of the Turks, that, under certain circumstances, they would be able to secure the assistance of one or more foreign powers in the war against Russia. The plan itself is, that the Porte should concentrate all its forces at its disposal in the Quadrilateral and the passes leading to it, thus leaving the road to Constantinople perfectly open. Constantinople itself would be strongly garrisoned, and the Russians practically invited to come and take it, or confine their efforts to the reduction of the whole Quadrilateral, with its fortresses of Rustzuk, Silistria, Schumla, Rasgrad, Varna, and the lines and earthworks which could be thrown up in various points, and defended with the energy of which the defence of Plevna has shown the Turks to be so capable. But the situation in the Quadrilateral would be very different from that at Plevna. Plevna fell on account of the impossibility of keeping open the communications with it. But in the Quadrilateral, the communications with the capital could always be kept open by the Black Sea, of which the Turks have the control, *viâ* Varna, through which any amount of the material at the disposal of the Turks, from all sources, covert and overt, would be poured. It is quite impossible to form any estimate of the time that would be requisite for the Russians to end the campaign if the Turks should adopt this plan. The transport of heavy siege material from Plevna and elsewhere would, it is true, be favoured by the hardness of the roads in winter-time; but this advantage would be more than counter-balanced by the difficulties of constructing siege-works and trenches, &c., in the frozen ground.

"Nor is this all. The matter is to be still further complicated by fresh reinforcements from Egypt, to the number of 20,000 men, for the protection of Constantinople or otherwise, but in all probability for Constantinople, if certain obvious objections of the Porte can be overcome. Further, the policy thus recommended in Europe, it has been suggested, should also be extended to Asia, and the same military tactics adopted there as in European Turkey, with, no doubt, certain modifications, which can easily be imagined.

"This project has received apparent confirmation already from two quarters—from the Russian head-quarters, and from Egypt. On Tuesday, the *Daily News* correspondent at the Russian head-quarters, stated that the military authorities were at first strongly in favour of an immediate advance across the Balkans to Adrianople, 'but that another course has been, at least temporarily, dictated by the more diplomatic element of the imperial head-quarters.' We are in a position to state that this course was dictated in consequence of the above plan having become known to the Russian authorities. The second confimation is contained in a letter from the *Daily News* correspondent at Alexandria, in which he states that the Sublime Porte had sent a demand to the Khedive for 20,000 fresh troops, and that a contingent of 6,000 men is about to leave for Constantinople. These facts, still further strengthened by the arrival of Suleiman Pasha from Varna with 10,000 men, must be considered not so much as confirmatory evidence of the plan we have mentioned, but rather as evidence of the rapidity and energy with which it is being put into execution; and it is probably not too much to say, that the same considerations which dictated its adoption, also dictated the meeting of parliament at so unusually early a period.

"Now, the motives which induce the Turks and their friends to adopt this plan are so clear as to speak for themselves. Either the Russians will be obliged to let General Todleben commence the weary work of digging the grave of the Porte with the spade in the Quadrilateral—as Todleben himself had already advised—or they must be prepared to risk the danger of the war party in England succeeding in entrapping the country into war, with the cry of 'Constantinople in danger!' And lest this should not be sufficient to move those who refuse to believe in any danger to Constantinople from Russia, the renewed assistance of Egypt under these particular circumstances has been determined upon, in order

to force the Russians to identify Egypt with Turkey, and bring on demands for explanations which might result in a *casus belli*, or the fall of the Beaconsfield ministry. Which of the two is the more probable is a matter of serious consideration.

"The importance of this momentous question cannot be overrated. It speaks for itself. Equally important are the views taken of it by the two great powers, besides England, who are most deeply interested in the settlement of affairs in the East; and no less important than the relations existing between these two powers themselves—Austria and Prussia—and their respective and mutual relations towards Russia and England. In effect, the German government states, emphatically, that it cannot separate itself from Russia, or refuse to endorse any claims Russia may choose to make, as long as those claims do not injure German interests. At the same time the German government never wearies in pointing out that it is the interest and duty of England to protect European interests in the East, intensely hopes that the temper of the nation may be roused to the roar-pitch, and incessantly deprecates the idea of the Marquis of Salisbury, that Germany would act under any circumstances against Russia, as a fundamental error. That the marquis might be eliminated from the cabinet is their sincere desire. If that were accomplished, they are convinced that Lord Derby's constitutional characteristics would prevent his remaining any obstacle to the policy they would speedily see Lord Beaconsfield carrying out. In short, no stone will be left unturned to induce this country to declare war, or to induce Russia to make such demands as we have already alluded to, and thus precipitate the catastrophe.

"As regards Austria, her views as to the march of the Russians on Constantinople are rather remarkable, and bear different constructions. The Austrian government has signified that it would not object to an occupation of Constantinople in the same sense as the German occupation of Paris, in order to satisfy the popular and military mind in Russia. That such an event would be regarded as eminently dangerous by the military element in Austria and England is, of course, but natural. But this is a consideration which must yield to broader views. The question to be answered is, whether Germany and Austria would remain passive if the temporary occupation of Constantinople by the Russians should threaten to become permanent. And then the question is, if Austria and Prussia should consent to remain thus passive, whether England could not secure her interests in another quarter without incurring the expenses and horrors of a war. The question as to whether Austria's consent to a temporary occupation of Constantinople may not be the result of a trap laid for her by Prussia, is a matter for her own private consideration. Here, again, broader considerations must prevail; for though Austria might disappear, Germany would remain, and it is immaterial for us whether it is A or B who protects those German interests which Prince Bismarck has declared he will protect, and which also protect Constantinople. It is also conceivable that Austria might be willing to allow a temporary occupation of Constantinople, with the full knowledge that the further the Russian army advanced from their basis of operations, the easier it would be to cut their communications.

"All this is as clear to the advocates of action in favour of the Turks as it is to those who are opposed to it. On public grounds the matter does not allow of argument. But private interests have found a reply to the opponents of such action which may appear very plausible to those in whose hands the decision may be imagined, in some circumstances, to lie. It is said, that much as Germany would like to oppose Russia at Constantinople, she has no option in the matter, and must co-operate with Russia. It is also pointed out, at the same time, that much as Austria would like to oppose Russia likewise, she cannot do so, because she is bound to Prussia, and that, therefore, England—as the only nation which is unfettered—must play a bold and spirited policy. This is a very plausible argument; but bold and spirited as the policy of England ought always to be, it is no part of our duty to assist Germany to keep Alsace and Lorraine, nor to protect Austria against Prussian designs, if any such designs exist. What we have to regard are our own interests in the event of Russia's exceeding her programme of emancipation; and we have to consider whether our interests in the East can best be consulted by fighting Russia single-handed, for the possession of Constantinople, or by establishing ourselves in a position which would effectually secure our interests against attacks."

Thus the *Examiner*. With a few unimportant modifications, the programme here laid down was carried out to the letter. The existence of this plan was communicated to Count Münster, and, within a day, found its way to the Russian head-quarters. Count Beust was also made acquainted with it, and led to his stating what the views of the Austrian government were in respect to an occupation of Constantinople. These views were as expressed in the *Examiner* article.

The result of this premature disclosure of the plans of the British government was, that the Russians determined to accept the challenge, and, whilst not neglecting the Quadrilateral, still not to undertake its reduction, but to follow up the retreating Turks and dictate their terms before the very walls of Constantinople, and thus force the British government also to show its hand, by declaring specifically what the interests were which it considered of paramount importance in Turkey; and also what means it was intended should be taken to secure those interests.

The Russian diplomatists calculated, that if Great Britain were really prepared to support its interests by force of arms, such a proceeding would be synonymous with a partition of Turkey, or, at any rate, to the commencement of such partition; and if such were to be the case, then Russia also would be able to drop her mask of benevolent action towards the Christians in Turkey, and also take her stand upon "interests."

The fact is, that both the governments at St. James's and St. Petersburg, as well as at the Ballhausplatz in Vienna, could no longer refuse to face the fact, that the days of Turkey, as an independent power, were counted, and that the first great blow having been struck by Russia at the very foundations of the empire, they would have to secure what each considered indispensable for its interests.

It was for this reason that Lord Beaconsfield did not allow any intervention immediately after the fall of Plevna, in spite of the impatient appeals of his party and the Philo-Turk party. He knew that intervention at that point would be immediately construed, by the Opposition and by the Turks, as intervention in favour of the Turkish government; and that even if successful, that intervention would only result in the re-establishment of the old order of things, however much it might be disguised. Turkey, he said plainly, must be utterly broken first, so that the clashing interests of Russia and England be brought face to face without the interposition of Turkey in any shape or form. He saw that the end of Turkey had approached, and was determined that England should not suffer by the catastrophe.

This view of the matter was also taken at Vienna, and, there is little reason to doubt, at Berlin also. At both capitals it was recognised that the apple was not yet ripe enough to be shaken down. A few more blows would suffice, and then the moment for intervention would arrive, and the division, in whatever form, of the spoil.

Meantime, however, the fiction of an independent Turkey had to be kept up, and also the fiction of the sanctity of treaties. These fictions were still to cost a vast loss of life, and a vaster amount of misery. It is in consequence of such fictions, that since the close of the American civil war, Europe has presented the aspect of one vast camp. Every nation has already armed or is arming to the teeth; and the relations of one country to the other are more or less framed on the basis of war in abeyance, rather than the basis of actual peace. Practically, there is but an armistice between the most important powers, and a state of things that calls to mind the truces entered into during the Crusades. But this modern peace does not possess the advantages which recommended those of the dark and middle ages. When the Crusaders entered into their truces with the Paynim. it was perfectly well understood that such truces were to terminate at a certain date, after the lapse of five, ten, fifteen, and even twenty years. When the term agreed upon had expired, war recommenced, or the truce was renewed on the same conditions, or with certain modifications, as the case might be, and as experience had judged necessary. But, under all circumstances, peace was actually ensured for the time determined upon, and there was then, at least, so much confidence in the word of honour given by either combatant, that there was no fear of the compact being broken before the period had elapsed.

Now, however, the sacred character of a treaty has practically disappeared, chiefly, indeed, in consequence of the rapidity of the changes which an ever-advancing civilisation entails. These changes are such that they frequently render the stipulations

of peace far more onerous to one or the other party than they were ever intended to be. The natural consequence is, that the nation upon which these stipulations bear with undue severity, chafes under the restraint, considers itself unjustly treated—and with reason—and seeks eagerly for an opportunity to throw off the fetters which changing circumstances have invested with a weight far beyond the original burden.

When, for instance, the treaty of Paris was signed, there was no idea of the Suez Canal becoming a reality. Railways, telegraphs, steam-ships, have increased at a rate which has enormously altered the relations of one country to another. Fresh centres of commerce have been opened up, both for supply and demand; the emission of endless loans has so interwoven the interests of one country with another, that what may have been fit and just ten years ago, is now highly antiquated, out of place, and unjust.

This fact has been fully recognised by practical men, by the mercantile community at large; and it is, moreover, so self-evident, that treaties regulating the commercial relations of one country with the other, are not concluded for a theoretical perpetuity, but for a certain stipulated number of years, at the end of which, either party can give notice of withdrawal for the purposes of confirmation, revision, or modification, according to the change of circumstances.

This principle is undoubtedly a sound one; and if, when sufficiently tested, it works well in commercial affairs, where the sharpness of self-interest attains its acme, there seems to be no valid reason why it should not be followed in purely political treaties, at least in the very great majority of cases. Here and there, and under certain circumstances, cases might arise in which it would be advisable to make the treaty final, as far as finality in matters human can be secured; but, generally speaking, no treaty should be concluded for a longer period than twenty-one years, in order to allow the coming generation to judge of their fathers' work, and allowed to revise it, the understanding being, that at the end of that period the contracting powers should meet, and consider whether the contract should be confirmed or subjected to such arrangements as might be collectively agreed upon. Not only would such an arrangement be best calculated to prevent war from breaking out, but it would also be the first and most important step to the establishment of an international tribunal for the regulation of international questions.

It would have been not only wiser, but more honest, had the powers concerned abandoned the fictions of the treaty of Paris and the independence of Turkey, and proceeded to start from entirely fresh lines, simply considering how their separate interests could be secured to fall in with the welfare of the people concerned, whether Turks, Jews, or Christians.

As it was, however, the war was decreed to go on to the bitter end, and thousands of people to be sacrificed in order to ripen the apple, which so many claimants were waiting to share between them.

CHAPTER XXVII.

"GENERAL WINTER" IN THE FIELD.

WHILST waiting for reinforcements, General Gourko's forces, encamped on the bleak ridges of the Balkans, within range of the Turkish batteries and rifle-fire, had a hard time of it; but still were not in so deplorable a condition as their enemies. Great, however, as were the discomforts, the hardships, under the rule of "General Winter," were not so severe in the mountains of the Balkans as they would have been in the plains of Roumania or in Russia itself, where the icy east blasts across the uninterrupted surface of bare ground, chilling man and beast to death.

In the Balkans the mountains protected the men from the cutting winds, whilst the forests supplied an abundance of fuel, and thus fires blazed on every side where the soldiers had rigged up their shelter-tents between the smooth, straight beech trunks,

and had their garments all hung about to dry; there was a continuous musical ring of axes and sabres cutting fuel, only interrupted by the infernal whizz and angry crack of Turkish shells; rifles were stacked in long irregular lines, or were clustered about the large trees; and crowds of soldiers were gathered about the kitchens or busied with the details of their simple toilettes. Some of the bivouacs were continually exposed to rifle-fire; not that they were in sight of the Turkish lines, but the bullets went over the crest of the hill, and grazing the earthworks, came dropping into the bivouac in the rear, chipping the trees and wounding men and horses. They were not spent bullets either, for they still had force enough to go through a three-inch sapling, and then stick in a tree beyond. The soldiers in their bivouacs dug great holes in the ground, pitched their tents over them, and then piled the earth and sods up on the side towards the enemy, so they had a very good shelter at all times. The fires were also built in little earthworks, for no one liked to have a live bullet in his kitchen; and whenever there was a fusillade nearly every man was under cover. The shells and shrapnel came in, but the men took the risk of these projectiles, and attempted no defence against them. A thin cloud of blue smoke from the fires rising out of the tree-tops, and drifting away to leeward, marked exactly where the bivouac was placed, both to the eyes of friends away back in the town, and to the sharp sight of the enemy near at hand. Thus closely together lay the two armies on the mountain tops, and when the snow covered the ground, the picturesqueness of the mountain bivouacs was without parallel. The tree trunks came out sharply with their deep grey colour against the pure white, and every figure was in distinct silhouette. Before the snow fell, the grey over-coats of the soldiers harmonised exactly with the colours of the carpet of dead leaves, and it was difficult to distinguish the men from the ground they lay on. In the snow, too, was written more plainly than with words, the history of the movements of each man in the skirmish line. One could follow every step of the advance of the Russians as they drove the Turks from tree to tree upon the open summit, and mark just where each soldier sought shelter—the means he took to get nearer the enemy; and one could even judge accurately the state of the soldier's mind as he dodged from tree to tree, whether he was reckless or cautious, enterprising or timid. The tracks of the Russian boots followed up the prints of the Turkish sandals, just as one finds, in the freshly-fallen snow in the country, the track of a cat following the trail of a bird as it goes from bush to bush in the garden, and then a few feathers and a drop or two of blood, which marks distinctly where the prey was taken. Pink stains on the white ground among the trees on the mountain were only two eloquent, and here and there a pool of blood, that had flowed warm and melted the snow in a dark red spot, showed where men had been hit hard, and the impression of the bodies where they fell, the tracks of the comrades who came to carry them away—all was there, unmistakably, even too plainly legible. The Turkish dead, stripped by their friends for the ragged woollen clothes they wore, lay nearly naked on the spot where they had fallen, their bare legs and arms half buried in the snow, the ghastly spectacle all the more impressive in the cruel cold and the desolate landscape. Nothing, in all the previous battles of the war, was so impressive as the sights of a short hour on the mountain the afternoon of the attack, capture, and final surrender again of the redoubt on the summit of the Baba Konak Pass. The majestic solemnity of the mountain scenery; the awful mystery of the wild forest; the cold, the snow, and the driving mist; the freshly wounded and the dead in the snow close by; the living who were telling the story of the fight with their rifles still hot in their hands—these were surroundings to make one realise the full extent of the horrors of the war in the mountains. As for the wounded, they were almost equally badly off on both sides, and with the advent of the severe weather their sufferings increased tenfold. Some of the wounds were wonderfully eccentric. One man was shot through the lungs, and for some days he actually breathed through the hole in his chest, as could be seen by holding a match to the aperture, when it was literally blown out by the man's breath. Another, a Russian, was wounded just above the right knee, whence the bullet, winding spirally, cork-screw fashion up his leg, finally lodged under his left shoulder-blade. A third, a Turk, was struck in the left cheek by one bullet which also traversed the other, and at almost the same moment was hit by a second in his right cheek,

which also sped through the left. Still, though the cold and the snow severely tried both the healthy and the wounded, they were less trying than the sleet and rain, alternating with heavy drenching mists, which saturated everything with water, and filled rifle-pits and trenches. At these times, when a thick curtain of opaque mist hid the enemy, the effect of the talking and bustle in their lines, as it was magnified by the fog, was surprising. It seemed as if one could almost touch them with a sword's point, and there was a consequent incertitude on each side as to what the other was doing that was very trying, quite apart from the difficulties of the position: for bleak mountain tops are not favourable spots for bivouacs; and although the cold had not yet been very intense, the men had had a sufficient degree to give a good idea of what life on the mountains would be when the winter settled down in earnest, and the snow lay three feet or more deep. Even as it was, the mountain landscape had quite an Arctic aspect, peak on peak as white and unbroken as the summits of the highest Alps, and the plains of Sophia in the distance completely snow-carpeted. But the soldiers accommodated themselves to the snow and cold very well. They had plenty of fresh meat and soup, were warmly clad, and, considering the difficulties of the campaign, as well off as could be expected. Still, as may be imagined, they were eager for a change of some sort, and great was the joy when the news of the fall of Plevna reached them. Officers embraced each other, soldiers cheered, and cheered and cheered again, and everybody felt free to give way to the wildest expressions of delight. General Gourko went to the positions with his staff to tell the great news to the troops in the bivouac there. He remained with Count Schouvaloff, and his aides-de-camp went up into the intrenchments with the tidings. The cheers in the bivouacs had announced, long before the aides-de-camp arrived, an event of more than usual importance, and all the soldiers were curious to know what had happened. When they were told the news they jumped upon the parapets and waved their caps at the astonished Turks, who were close by on the opposite ridge, and gave round after round of hurrahs. The sun, which had been veiled for days, just at this time shone out brightly, and the mist dissipated, giving the opposing lines, for the first time for a week, a fair sight of each other. In the batteries the numbers were ordered to their posts, and then, while the parapets were lined with men, all waving their caps and cheering frantically, volley after volley of shell was thrown into the enemy's fortification, for once a joyous and triumphant cannonade. The cheers spread like a wave from one end to the other of the line, down in the ravines, back in the woods—away on the summits went the sound until it became a faint hum in the distance, and died away and was renewed again with repeated energy for a long while. This was the beginning of the *fête*, and that day nothing that could be eaten and drunk to celebrate the tidings was spared, especially as, fortunately for the banqueters, a sutler arrived with an immense train of waggons laden with every kind of groceries, delicacies, and small wares, and began to unpack his goods in an empty shop opposite the general's head-quarters. The news of this arrival spread quicker than even the report of the fall of Plevna, to judge by the crowd of officers of every rank who besieged the entrances to the shop long before the proprietor had any intention of opening the establishment. The covers were off some of the cases, disclosing sugar, preserves, bottles, and stationery; and this attraction was too great to be resisted, so the crowd entered the shop with good-natured shouldering and hustling, and began to pile up the articles they wanted with a recklessness that would have broken the heart of a methodical shopkeeper. They dived into the great cases, bringing out, with shouts of delight, all kinds of *bon-bons* and candies, jams and jellies, which they laid hold of with the eagerness of children, and began to eat on the spot. The sutler and his assistants could do nothing but make spasmodic attempts to regulate the distribution of the stores, which only made the confusion greater, and the happy crowd elbowed and pushed, and continued to help themselves in abundance. As each one gathered his stock of plunder, he was as impatient to pay for it as he had been to get hold of it; and although the sutler calmly took four times the price of the goods at Bucharest, the tariff was never questioned, and bright new gold pieces rattled into his canvas bag in a stream, making music that would have delighted a miser. Doubtless the glitter of the gold blinded his eyes to the scene of indescribable confusion.

It was really an interesting and ludicrous spectacle, this merry attack on the sutler's shop. Colonels and captains, staff officers and surgeons, all jostling one another like so many children at a table full of *bonbons*, burying their arms deep in the cases where the sweets were, loading themselves with bottles and parcels, laughing and talking and joking all the time. Officers splashed with mud, their faces tanned and roughened with exposure, dipped into the pots of jam and broke open boxes of *bonbons* with laughable earnestness, as if they had been denied sweets since their childhood, and their early taste had only grown the stronger from long abstinence. From the bivouac in the snow on the mountain, where black hard bread and sugarless tea had, perhaps, been for days their chief diet, to a shop piled full of delicacies, was a change which must be experienced to be realised in its entire extent, and, notwithstanding the ludicrous aspect of the performance, it had a serious side which no one could fail to remark at the moment. This was the absolute necessity for supplying troops exposed to the severity of a winter with such fat and warmth-producers as sugar, oil, or fat. In a mountainous country sugar is the best stimulant of its kind, either pure or in coffee or chocolate. Chocolate is especially beneficent. During some of the long Carlist marches under Dorregaray, a cake or two of chocolate kept the men in good spirits for the whole day, and effectually staved off the cravings of hunger whilst really furnishing nutriment.

Meantime, trying as was the winter with its snows, rains, and posts for the Russians, it was still more trying to the Turks in the field, and especially to the prisoners. The plains of Roumania presented a vast surface of snow, only broken by the bleak telegraph poles and the fluttering of carrion crows. At times these birds of prey increased in numbers, making almost black the leaden sky. Then afar off, breaking the horizon, a long dark line would come slowly moving in caterpillar-fashion along the road, resolving itself into a column of Turkish prisoners, in front of whom gleamed the bayonets of their Dorobantz guards as they plodded slowly forward under the weight of their miscellaneous kit. Following came a few Turkish officers, either on ponies or on foot. Behind them marched the men who once kept the flower of the Russian army at bay round Plevna. Spiritless and broken they looked as they trudged wearily along the road to their captivity. Half-starved, almost dead with fatigue and the severe cold, many with fever burning in their eyes —mere stalking bones and foul rags—such had become the brave troops who made the fame of Osman Pasha. Suffering from typhus and small-pox, many fell out of the ranks to lie down and die. "One poor fellow has thrown himself on the snow by the road-side; he can go no further. A comrade, loth to leave him, follows and tries to persuade him to struggle once more to join the line. There is no response. He has swooned or is dead. A soldier of the rear-guard now comes up and roughly pushes the living man back to the ranks. Then he kicks with his foot the bundle of rags on the ground. There is no sign. With the butt-end of his gun he turns the head over from the snow. The eyes glare at him with a fixed stare. He is dead. The soldier brutally pushes the body deeper into the snow, shoulders his rifle, and joins his guard.

"Thousands of birds of prey whirl round and settle in front and rear, always following this grim procession like sharks round a doomed ship. A few yards further on lies, half-covered with snow, a nude body of another dead Turk, stripped by his companions for the little warmth of the rags he wore. A crow has just settled on his clenched hand, and the dogs are slinking round their victim. A few paces more brings us to another miserable, lying as he died with upturned face, staring on heaven through the fast-falling snow. We must now be near a village, for there are pigs about, and we have just seen a skirmish between these swine and the dogs, to see which shall be first at this horrible carrion. It is the village of Putenieu, almost lost in the snow and ice. How different the place looked from what it was when I first passed through its streets in the early summer! The Russian advance guard had then only just gone by, and I was in search of Dragimiroff to know where the great crossing of the Danube was to take place. We were then suffering from mosquitoes, intense heat, and blinding dust. Now we were shivering in our furs with cold. Putenieu has become a place of great importance since those days. It is now one of the resting-places for sick and wounded soldiers on the road from the Danube to Fratesti, or to the hospitals at Bucharest and in Russia.

"It is in Putenieu that Dr. H. Sandwith has erected, with funds from the England-Russian Sick and Wounded Society, an Etape or Hospice to shelter one thousand men. Hundreds of the Turkish sick passing through to Russia also find shelter and comfort within its walls from the severe cold weather. The director, M. le Baron de Benckendorff, and for the while our good host, is full of work. Not only do his own sick and wounded appeal to his sympathy, but also the miserable Turks; and they pass through in thousands daily, dead beat, and weary from their long march. 'Four thousand passed through to-day,' said the baron to me the morning I arrived. 'Our little village is over-crowded with the sick they have left behind. This evening four thousand more are expected.' A loaf of bread and a pound of meat are given to each prisoner just before entering the town. Then they are billeted for the night on the inhabitants, choking up their little hovels, breeding vermin and pestilence wherever they go. It is indeed hard on the villagers of Putenieu, for there is an endless stream of prisoners. No sooner has one column left than another enters the village.

"Unfortunately, through this bad arrangement on the part of the Russian and Roumanian authorities, the inhabitants expend their annoyance on the poor prisoners, and the Roumanian peasants are very cruel and brutal. They beat these poor wretches, illtreat the sick, and after the darkness hides their cruelty from the Russian eyes, they turn them out into the cold night, which means in their plight, half starved and semi-nude, certain death, for the thermometer registers sometimes twenty degrees Reaumur below zero. The result is, that the little dead-house opposite my lodgment is well tenanted the next morning with frozen corpses. Dr. Sandwith and myself visited this charnel-house. There are two rooms. In one, ten or twelve bodies were lying as they had been pitched in dead, and others must still have had some life left by their expression and the position of their bodies. In the other room four Turks had sought shelter from the bitterness of the night, and had cleared a space in the mass of dead, and with scraps of rags from the bodies, and some sticks of straw, had lighted a fire, and were crowded round the wretched smoulder for warmth. One poor shivering wretch, nearly naked, crawled from where he was thought to be lying dead towards the group, and feebly struggled with the rest for a place at the fire. Dr. Sandwith remonstrated with them in Turkish for their unkindness to their miserable comrade, and so the poor creature was allowed to huddle in with the cheerless circle. We asked them what we could do for them. They were very hungry, some not having eaten for three days. Major Baker and the doctor, who were with me, sought in the village for food; but nothing, for love or money, could be got but onions and bread. The Russians or Roumanians profess to give them bread and meat for daily rations; but there is no doubt that many in some way get none, and there are hundreds who, through sickness, cannot eat this rough fare. Soup is dealt out to many by order of the kindly baron, but only the stronger who struggle for it receive it. The weaker go to the wall, and die neglected from sheer starvation, as their poor emaciated bodies will testify in the little dead-house. The weather has been more than usually severe for the last two days, and the mortuary is crowded with dead Turks piled up several feet high, and crowding the passage leading into the street. Every morning waggons cart them, unwashed, uncovered, to the huge pit outside the village, and there these brave and long-suffering men find a last resting-place."

Such is the description given by the correspondent of the *Daily News*, as to the way in which the Russians treated their prisoners on the march. Severer still were their hardships when winter set in with all its rigour, and the thermometer sank down to 17 degrees Reaumur below zero. Taken all in all, more perished—men, women, and children—in the months of December and January than during the whole year.

CHAPTER XXVIII.

PASSAGE OF THE ETROPOL BALKANS.

NOT until Christmas-day—fifteen days after the fall of Plevna—had sufficient reinforcements arrived for General Gourko to continue his advance.

It had been evident, for some time, that he would either have to retire from the positions he had taken on the mountains near the Baba Konak Pass, or else cross the range at any cost, for the severity of the weather made it almost impossible to bring up the supplies and ammunition, and life in the bivouacs on the mountain became daily more and more difficult. Scarcely a night passed but frozen hands and feet were counted by hundreds. Thirty soldiers were frozen to death during four days of a great storm, and the number of sick from exposure amounted to more than 2,000. Before the snow-storm the mountain paths had been rivers of mud, and when these froze solid they became quite impassable, and steps had to be cut with axes. The thin shelter-tents, torn by the wind, and with difficulty kept fastened to the ground in the gales, were exchanged for rude huts covered with turf and logs, and holes dug in the steep banks among the trees. The transports containing warm clothing, which had been long talked of as on the road somewhere between Sistova and Orkhanieh, were not even expected to arrive for weeks, and the soldiers made use of the skins of the bullocks and sheep they slaughtered to wrap their feet in and to make jackets of; but with such meagre resources there was little enough alleviation of the suffering from the cold; and then the men in the trenches along the watershed were constantly exposed, not only to the bullets of the enemy near at hand, but to the insidious attacks of the frost, which too often proved a much more dreaded foe.

The Turks suffered in an untold degree; but they had much more skill than the Russians, not only in constructing earthworks, but in building shelters; and often the miserably-clad infantryman behind the breastworks was found stowed away in comfortable little huts of logs and straw, where a small fire kept several soldiers warm; and for the time he remained there he made these huts his home, and defended them as such. The Russian infantryman, on the contrary, rarely considered himself at home in the trenches, because he remained but a few days, and then was relieved and sent elsewhere. This constant rotation added greatly to the comfort of the soldiers; but for actual service in earthworks it was a mistake, for the soldier who lives for weeks in a breastwork learns every foot of the ground in front, and, when the time comes, will advance with confidence or defend his hut with desperation. The trenches at Plevna illustrated perfectly the difference between the Turk and the Russian in this respect. So in the Balkans, while the Russians endured every discomfort on the mountain tops, the enemy, under the same conditions, was comparatively comfortable. The severe cold was not only unexpected, but was quite unseasonable; and when the reinforcements arrived, they found themselves obliged to bivouac in the snow, because every foot of ground in the town of Orkhanieh was already occupied.

The scenes in Orkhanieh during the storm and cold surpassed description. Generals quartered in fireless rooms and in mud houses, and soldiers sheltered behind piles of snow, or clustered in groups about small fires, were patiently waiting day after day. Officers came in at all hours of the day and night, many on foot from Osikovo, exhausted, half frozen, seeking shelter which money could not buy. Salt failed, and bread became scarce; fifteen francs being given for a small loaf. Wood was a luxury which few could obtain in any abundance; for, although there were forests in every direction, all the empty carts were used in bringing wood for the hospitals and ovens, and so there were many cases of frozen feet and hands in the town itself.

Before daylight on Christmas morning the bugles sounded the *réveille* again and again, and soon the infantry crowded the streets on the march towards Vratshesh. It was bitterly cold and frosty. The fog had settled down so densely, that before sunrise

the darkness was absolutely impenetrable; and even after daybreak, objects across the narrow street were vague and indistinct. The fog clung to the houses and trees and the clothing of the soldiers, and froze there, covering every surface with a glistening garment of pure white. At nine o'clock General Gourko and his staff left the town for the bivouac of the dragoons on the chaussée just behind the positions there.

It was a rare spectacle this group of horsemen as they moved slowly along the ice-paved chaussée. The aides-de-camp were dressed in the most fantastic costumes. Some were in great-coats of dressed skins ornamented with embroidery and buttons. Some were enveloped in Circassian cloaks, all doubled up with the weight of additional clothing, and with capuchons and wraps about the head. General Gourko, leading the group, was alone dressed in a simple surtout, without mufflers of any kind. He rode along apparently unconscious that the frost was turning his beard white, and covering himself and horse with frozen crystals. It resembled more a carnival cavalcade than a general with his staff, the effect being heightened by the picturesque Kuban Cossacks in the convoy with their sheep-skin hats and curious weapons.

Before the force had been out half-an-hour icicles hung from the men's beards and from the horses' mouths, and like a procession of so many Father Christmases they rode into the defiles through the chill fog, the view being limited to the snow-laden trees along the road-side. The soldiers began to straggle, several dropped, overcome with cold and fatigue, and some were injured by falling on the ice. Shortly after passing Vratshesh the fog became thinner, and the white mountain tops, glistening in the sunlight, shone through the mist as if hung in the air, for the oases were still hidden by the vapour. The road followed by Generals Gourko and Rauch was the one leading from Vratshesh to Lukovo (as shown in sketch X), and from which the old high-road to Sophia turned off shortly after leaving Vratshesh and crossing the Balkans north of the village of Tchuriak. This road was the principal thoroughfare towards Etropol before the chaussée was made. It had been disused for a number of years, and was never more than a narrow neglected bridle-path. It was almost lost among the trees, was gullied with the rain, and grown over with bushes. A few days before the advance, two battalions of the Praobrajensky regiment began to work on the path, graded it somewhat, widened it nearly the whole extent, and cut steps in the ice in the steepest place up to the summit. A portion of the way was in full sight of the Turkish redoubts east of Baba Konak. Therefore work could be undertaken only at night; and when the advance was made, the path was so good that it was believed that cannon could be brought up with horses. But for a long time, when the road was crowded with men and material, it was completely blocked with artillery and infantry. The soldiers made fires along the path and cooked their suppers, taking matters very easy. Four guns and their caissons were hauled up by hand, and caused great delay. The ropes were short, permitting not more than sixty men to take hold; and even this number worked with exasperating deliberation. They were soldiers of the line that were detailed to bring up the first cannon—small men, unused to such work, and, after a long march from Plevna, did not enter with any enthusiasm into the novel and exhausting labour.

General Rauch stood half-way up the first steep incline, encouraging the men to pull, and spurring up the officers. The whole night long he climbed up and down the slippery path, endeavouring to communicate some of his activity to the officers and men. The distance up the mountain was, perhaps, four miles, and the entire route was lined with soldiers sleeping on the ice, or gathered around small fires in the snow. When they were awakened and ordered to move on, they never showed any impatience, but, with their inimitable *sang-froid*, got up and walked a few paces and then slept again, dropping down like dead men. Towards midnight General Gourko came up the path, followed by his staff. He could no longer endure the delay, and his sleepless energy would not permit him to remain inactive in the rear. A Cossack post was found on the summit of the watershed, and here the general and his staff lay down on the snow around two fires, which were kept low that the enemy might not notice them, and slept like the soldiers. The Praobrajensky regiment had advanced into the village of Tchuriak, which had already for some days been occupied by the dragoon outposts, and with them part of the train of packhorses had descended in the early part of the night, so that there was little to eat,

and meagre comfort in the snow bivouac. Officers and soldiers lay around indiscriminately as near the fires as they could get, for the icy wind was blowing across the peak, and the snow was freezing hard.

The sun rose on a scene of wonderful picturesqueness and a landscape of serene beauty. Generals and aides-de-camp, some wrapped in bourkas and furs, some in overcoats alone, without additional covering, lay there in the snow huddled together about the fires. Cossacks and dragoons were already busy with their cooking, and hundreds of horses, tied to the trees about the bivouac, stamped impatiently in the snow. Southward lay the great plain of Sophia, its pure white face only broken by little dark lines where the villages were; and beyond, half veiled in dense clouds, were the mountains further south, and the great peak Vitosh that towers over Sophia. Through the trees eastward was clearly visible the great bare peak near the Baba Konak Pass, and the lines of the Turkish works were drawn on the snow as plainly as pencil-marks on white paper. General Rauch, always on foot, clambered up to the bivouac for a few moments' rest, and to consult with General Gourko. Then both General Rauch and General Gourko were off again to hasten the movements.

After a hurried breakfast the men again set to work at the cannon; and at last, by noon on the 26th of December, four 4-pounders, with caissons, were placed on the watershed. News had come from the column on the right that the road was well-nigh impassable, and nothing whatever was heard from Dondeville on the left; but the guard had started up the mountains near Etropol, and worked with a will. The road down to Tchuriak, being in sight of the Turkish positions, was closed by patrols, and no movement permitted in that direction. Everywhere all over the mountain top soldiers bivouacked in the snow in picturesque groups, cooking their food and drying their clothing, under little shelters constructed of snow and branches.

When the twilight came on, the whole force started down the mountain, everybody on foot, for the path was so steep and slippery that no horse could carry a rider down. A snow-storm began before they had gone far, and doubled the difficulty of the descent. Part of the way they slid down like so many schoolboys, and afterwards let themselves down through the undergrowth, for the road was one solid sheet of ice. Two or three miles of this work brought them to the head of the valley, and over the Balkans, breathless with the exertion of the descent. They paused a moment, and shook hands in the darkness, and then pushed on to the village, where they slept under a roof as peacefully as if the Turks were twenty miles instead of one mile away. That the Russians were thus allowed to cross the Balkans by so difficult a path, at such a season of the year, was quite inexcusable on the part of the Turks and officers, who, by their carelessness in looking after their outpost and *reconnaissance* services, were guilty of murder, and doubly so when they had such self-sacrificing men as the Turkish commanders had.

Tchuriak is a small village hidden away in a gorge, and a narrow valley winds through the hills to the plain beyond, a couple of hours' ride distant. At daybreak on the 27th, the brigade of Kuban Cossacks was sent down the valley with one regiment of infantry to the left, and one up on the height to the right, against some Turks in a little rifle-pit on the hill, who fired four rounds and then retired.

The enterprising Kubans pushed ahead, and saw, out on the plain, a long transport train slowly moving towards Baba Konak. They received orders to try and capture it. About three o'clock, two squadrons—scarcely more than 100 horsemen—dashed down into the plain and cut off half the train, more than 200 waggons laden with provisions and forage. The two squadrons of Turkish regular cavalry and Circassians retired immediately when the Kubans came down; but finding they were not outnumbered, returned and gave battle. After a short sharp fight, in which ten Turks were killed and two Cossacks wounded, the waggons were left in the Russians' hands. The Cossacks cut the telegraph wires, the infantry took up positions on the hills near the plain, past the village of Potop, and the passage of the Balkans was an accomplished fact.

At the same time, a part of the column of Dondeville was seen descending the slopes on the left, like a great black serpent; but it was a part only—the rest finding it impossible to get the artillery over the heights. A few prisoners were taken, who reported that the movement was a complete surprise; which seems incredible, considering the delays which occurred, and the impossibility of

finding routes which were not in plain sight of the enemy, especially as, on the 26th December, the brigade of Cossacks had raided up to the river Isker, surprised and routed various bands of Turkish Circassians, and cut off part of a large transport, escorted by two squadrons of cavalry and a battalion of infantry, gathered over 600 head of cattle and a large flock of sheep, and returned at night to Stolnik, having killed three-score of the enemy with a loss of three wounded.

In addition to Dondeville's column, General Weliaminoff's column, which was to have operated further west, also descended into the plains by the Tchuriak road, the descent to Zilava having proved impracticable. These troops had undergone the most severe hardships, and reported that the storm on the mountain was terrible. Soldiers who paused for a few moments became indistinguishable from masses of snow. Many strayed away. All suffered from want of food; and when they arrived at Sarantzi, or Tashkessen, after an almost continuous march of five days, and for thirty-six hours without a halt, they were drenched and half frozen together.

The crossing had thus far cost very few lives, and it was accomplished, too, in the face of unusually severe weather, and to the complete surprise of the enemy. The result of the operation was the occupation of the chaussé in force, by a large number of battalions of infantry, with artillery in abundance. Therewith all communication between the forces in the Baba Konak Pass and Sophia was cut off, and the only line of retreat left open for the Turks was that by way of Zlatitza, and thence to Tatar-Bazardjik and Philippopoli; whilst even along this line there was danger to be apprehended from the Russians in the Schipka Pass as soon as General Radetzki forced his way through, or the Turks opened it for him. Meantime the cavalry scoured the plain of Sophia, two regiments circling about as far eastward as Dolny-Kamarli, south of Baba Konak, and every day prisoners and captured supplies were brought in. News came in that Lutakovo was evacuated; and the latest reports from the positions in the pass, declared that the Turks had withdrawn several cannon from the earthwork on the summit of Greota, and were fortifying somewhere in their rear. They were found to have built three redoubts on the hill near Tashkessen, commanding the road at that point; and the first movement in force, south of the mountains, was to drive them from that position.

The attack was ordered for the morning of the 31st; and as this move was planned especially to give the lead to Dondeville, and so complete the chain about the Turks in the positions near the pass, the tidings which reached the force in the evening before the attack, that Dondeville's column had failed to cross the mountains, and had retired to Etropol, was anything but encouraging. The failure to cross was bad enough, but he had been obliged to leave cannon on the summit, and the artillerymen who remained with the guns were all frozen, and buried in the driving snow; and among the infantry the losses were also serious; for there was no shelter on the cold mountain sides, and the snow made a bivouac there quite impossible. So it was with a certain seriousness that the force went forward through the narrow little valley in the grey light of the early dawn.

The valley was crowded with reserves, and the artillery was struggling along the icy road. The valley and the mountains were covered with snow, the masses of pure white only broken by little dark spots of irregular shape, where villages stood, patches of forests on the slopes, scattered trees along the road, and the black straight line of the Russian troops as they marched to attack the positions.

Directly over the little village, on a sharp, rocky peak, was seen plainly the dark line of redoubts, and little camps with tents and huts, and lines of infantry filing down the mountains toward the village. Every man could be seen as plainly as black on white could be, both Turks and Russians; and the smoke from the first gun was waited for with the same impatience as one watches for the curtain to rise in a theatre, though a drama of most intense interest was about to commence, where the action was real, and the performers in all earnest, and the stage a broad landscape where every object was as distinctly visible as if presented on a mimic stage.

The Russian forces were divided into four columns. The extreme right, commanded by General Kurloff, was to cross the road and flank position by advancing over the mountain near where the village of Malkocevo is situated. The next column, and in reality the main force, was to rest on the road,

to demonstrate in front, and to turn the Turkish right flank, near the village of Danskioi, with five battalions, while another column was to cross the mountains between Danskioi and Gorny-Kamarli, and the force of Count Schouvaloff was to advance directly upon the rear of the enemy.

Shortly after daylight two batteries got into position within easy range of the redoubt on the Baba Konak, and began to work. General Rauch's column concentrated behind the hill to deploy right and left, and the sharpshooters stolidly climbed the hill where the redoubts were, and toiled slowly up among the rocks and bushes, whilst the Turkish riflemen stood waiting just in front of their earthworks, two or three together. The great, square, black masses of infantry, that stood just beyond the road, began to string out in long lines, and advance against the skirmishers towards the Turkish left; while two brigades of cavalry, that were sent towards Dolny-Kamarli, moved along in a thin straight line rapidly eastwards.

All the forenoon the artillery was exchanging shots with the two Turkish batteries. Scattered musketry was heard, and then the batteries from the hill in the rear of the Turks began to fire. Towards noon there was a brisk fusillade on the right. Shortly after it began there came the news that General Mirkovitch was wounded there. The column had met with a stubborn resistance. The Turks in the rifle-pits on the mountains defended their left with determination. A caisson exploded in the Turkish battery over the village, giving the signal for ringing cheers that went up all along the line, and Rauch's troops, which joined hands with Kurloff on their right, began to move up the hill between the batteries and the village, and soon were on the crest. The order to attack was given them about two o'clock; and just as they went forward down the slope towards the village, spreading out all over the field, there came a fog, under cover of which they rushed into the village, the Turks running away in every direction. The enemy's batteries ceased firing from the hill, and in a few moments the musketry dropped away into a few straggling shots.

The Russians entered the village before four o'clock. There were a few stray shots falling into the place, and several men were wounded there, for the Turks were still resisting stoutly at the Karaula, half a mile up the road; but the position was evacuated, and only the blood-stained, powder-blackened snow, and a score or two of dead men, showed where the fight had been so hot. In the village were herded hundreds of prisoners. Soldiers were ransacking every nook and corner for plunder. Infantrymen were frisking about on captured horses, and there was the ghastly spectacle of dead and wounded on every side. But the worst was not in the streets, for many houses in the village were filled with dead. There was a station of the British National Society of the Red Cross here, and several hospitals, and dead and alive were found lying together as in the charnel-houses of Plevna.

At dark the fight ceased. A thousand fires twinkled all over the white slopes, and the Russians slept in the houses where fires lighted by the Turks were still burning. The loss, in killed and wounded, amounted to about 300; but it was a victory cheaply gained; for though the key of the position, the mountain on their left, covering their retreat from Baba Konak by the road towards Zlatitza, was still held by the enemy, pickets pushed up the road to the Karaula. The Turks had resisted with great valour, for they were outnumbered three to one. Their communications with Sophia had been cut four days; they had seen the Russians pouring over into the valley, and dragging their artillery by paths which were believed to be impassable; they knew their only hope of retreat from Baba Konak was by the Zlatitza road, and they held their ground like heroes.

One of the first things picked up in the village was a despatch from Baker Pasha, who commanded there, to Chakir Pasha at Araba Konak, dated the same day, telling how eighteen battalions of Russians had descended the mountains, and twelve were attacking him, and that he was surrounded by a circle of fire. General Gourko did not sleep until he had prepared for the probable retreat of the forces from Baba Konak by sending all the cavalry at his disposal to Petricevo, for Dondeville was to make the crossing to Zlatitza with General Brock's column, and thus remedy in part his failure to cross to Mirkova.

New Year's morning was hazy and mild; and as Gourko and his staff rode up the road at daybreak, the mountain tops were all hidden from view. With his ordinary escort of a score or two, some dragomans, and a few Cossacks, the general rode slowly

on, passed the pickets at the Karaula, and down the hill towards the triangular valley south of Baba Konak. Half-a-dozen Cossacks galloped down the road and divided, part following the road towards Araba Konak, part towards Zlatitza. There was perfect quiet, and every one in the small group of horsemen seemed to feel the uncertainty of the imminent future, for there was little conversation, and they went on, passing a dead man here and there, tracing the paths by which the wounded had dragged themselves to the rear, and those who had fought at Tashkessen the day before, had hastily retreated. No *reconnaissance* had been made towards Baba Konak; in fact, General Gourko was making the *reconnaissance* then, riding along as usual at the head of his staff, with only a handful of his escort a short distance ahead of him. A dozen prisoners were soon brought back, and one or two gathered in by the Cossacks came straggling along the road.

Just beyond the place where the road divides, the route towards Baba Konak comes out upon a little knoll, whence the whole of the triangular valley is visible. Here General Gourko halted, and anxiously looked. Near the houses at Araba Konak were several Turkish cannons, and a dozen Cossacks were galloping towards them. All along the further side of the valley were men running through the snow. The Zlatitza road was trodden hard. Cavalry had passed that way, and much infantry; so it was not surprising to see in the village of Dolny-Kamarli, whither a number of waggons were hurrying, the unmistakable black masses of infantry filling the streets. Cossacks of the escort, who went in that direction, wheeled, and crossed the fields to the left. Those who went towards Araba Konak, rushed off after the flying stragglers, and one by one headed them in. It was an exciting chase, for the horses could not go fast through the deep snow, and the fugitives scampered away until fairly run down, though some knelt and threw up their hands whilst the Cossacks were yet a long distance away. Meanwhile the troops on the Zlatitza began to crawl up the hillside behind the town, clustered like ants altogether at the foot of the hill, and then, quite like these insects, filling up and struggling along on either side of the moving masses. Six, seven, eight tabors were counted; but the rest were so huddled together, that it was impossible to separate them into battalions. Artillery had been ordered up, and the Russian infantry began advancing along the mountain which had been so vigorously defended the day before, then formed on the road below.

As the great black masses of fugitives stretched out and filled the road that zigzagged up the hill, it was clear that there were from 10,000 to 15,000 of them, and that they were moving away in a great hurry. They hastily threw up trenches on the summit of the hill, and by noon scarcely a Turk was visible. Two Russian guns were quickly got up, and there was some shelling and a little musketry; but the Turks had had two hours' start, and the pursuit went on over the hills. Before they were out of sight, the thinnest possible black line was observed winding down the White mountain flank beyond, and above Araba Konak. They halted, and then the small knot of horsemen, and the skirmishers in front of them, still lower down, hastened up to the main body, which speedily formed. Then, for a few moments, General Gourko doubted whether they were not the Turks, from the positions there; and the battery of 9-pounders which had just unlimbered where he stood, seemed to have arrived in the nick of time, when suddenly the soldiers gave a hearty hurrah, and the cheer was faintly re-echoed away across on the mountain; the line descended once more, and turned out to be the Russian column sent to operate in this direction.

At this moment General Gourko turned round, and said earnestly, "Now we can say, in all conscience, that we have crossed the Balkans, in every phase of the undertaking;" and he shook hands warmly with every one, congratulating those who counted this as their second passage.

There was certainly cause for felicitation, for the fight had lasted from Christmas until New Year's Day, first with the forces of nature, which were resisted with wonderful pluck and patient endurance by the Russian soldiers, and then with the enemy, who were driven from their chosen positions.—A few moments later the column from the mountains filed into the valley, and the soldiers distributed the rice, bread, and salt found in the Turkish camp. Near Araba Konak was a fine large tent of the Red Cross Society, and almost the first man the staff met was the chief doctor of the British National Society, Dr. Leslie, who

had come from the village of Strigli to ask for a guard from General Gourko, because he, with six other doctors, were at work on the Turkish wounded in the village, and it was deserted by the Turks, and not yet occupied by the Russians. Besides those seven doctors, the correspondent of the *Illustrated London News* was also there. The guard was promptly furnished, and the last heard of the doctors was, that they were still with the wounded. The Turkish surgeons all left with the troops.

With the capture of the Baba Konak Pass, and the successful passage of the Etropol Balkans, the plains of Roumelia lay open to the invaders. There was scarcely a point left where the Turks could have made a stand before Adrianople, even had they had the men and the means to concentrate them. Still, all the work had not yet been done by the Russians. The Turks, scattered into little columns and detachments at various towns, villages, and passes, thought of one thing only—that was, to resist to the last, and inflict as much loss on the enemy as they could, even though sacrificing their own lives in the attempt.

On the other hand, whatever might be the losses incidental to this spasmodic kind of warfare, the Russians knew that the game was all in their own hands. Like a great net they were closing round the Turks, driving them towards Constantinople and the Ægean. In the extreme west, the Servians had begun, before Christmas, to cross the Turkish frontier, and had captured Ak Palanka, on the road between Nissa and Pirot, on December 24th, Pirot itself falling into their hands on December 28th, where they waited to join hands with General Gourko, and thus effectually cut off all communication between Bosnia and Herzegovina with the rest of the empire, except by way of Klek in the Adriatic, whilst even this part was as good as closed to the Turks by the jealous attitude of Austria. In the east, Generals Radetzki and Skobeloff were preparing to force the Schipka, and clear off the army watching the issue of the pass at Kezanlik, and join hands with the left of General Gourko's command. Thus, from Nissa to Eski Zagra, there was soon to be a line of Servians and Russians joining hands, ready to sweep all before them towards Adrianople and the capital; whilst, north of the Balkans, the Roumanians in the west, and the Czarevitch in the east, were thoroughly clearing Bulgaria, and consolidating their power and administration there.

CHAPTER XXIX.

THE INVASION OF ROUMELIA.

WHILST General Gourko was engaged in clearing the Baba Konak Pass and defeating the Turks at Tashkessen, General Weliaminoff was cautiously feeling his way towards Sophia. At Gorni Bugarof he was attacked by the Turks, on January 1st, with such fierceness, that within a couple of hours he lost nearly 300 men; but the Turks were enormously outnumbered; and this fact, coupled with the recklessness with which they attacked, caused them a loss of 500 killed, and upwards of 1,500 severely wounded. The region in the vicinity of the village was thickly strewn with corpses, and for days afterwards the Bulgarians continued their horrible task of stripping the dead. The greater part of the dead lay within 100 feet of the shallow Russian rifle-pits, testifying to the heroism of the Turks, who, after advancing across an open cornfield for half a mile, ran straight up the slope within bayonetting distance of their foe, and held their ground until thinned out by the terrible fire, and at last turned back with the Russians upon their heels, and left half their number on the snow before they formed again on the road. After the fight there was an armistice, during which the wounded on both sides were carried off the field, but only the Russian dead were buried.

The following afternoon, January 2nd, General Gourko was at Gorni Bugarof, having left Tashkessen at noon. He reached the village just in time to hear the first few shots of a sharp little skirmish going on near a covered bridge over the Isker.

The enemy had thrown up a short line of low earthworks on either side the road beyond the bridge, and with a detachment of two or three tabors in the trenches, and three times this number in reserve, they attempted to prevent the passage of the river. The Praobrajensky regiment crossed on the ice, turning the Turks by either flank; and they retired after brief resistance, setting fire to the bridge and the village of Razdimne as they left. The soldiers reached the bridge before the flames had gained great headway, and began to throw water and snow upon the burning timbers with their copper pots, and extinguished the fire before the structure was damaged to any great extent.

General Gourko crossed while the fire was at its height, making his way with his accustomed coolness through the flame and smoke—the first one to pass over the bridge on horseback; and his staff followed in momentary expectation that the flooring would give way. If the bridge had been blown up, the passage of the river would have caused no little difficulty. As it was, the whole detachment passed over in safety, followed by the rest of the column, and passed the night in Gorni Bugarof, about ten miles east of Sophia.

The next day, the enemy still continuing to show a bold front, a strong column was sent round to the north of Sophia, and General Gourko made a personal *reconnaissance* in that direction, approaching within a mile of the city. Great camps were plainly visible near the road; the black lines of a dozen earthworks crowned the summits of the hills near the city on either side, and he could plainly see that the fortifications were manned. The attack was decided upon for the morning of the 5th, when General Gourko expected to lose 3,000 or 4,000 men in the assault; for although he had so disposed his forces as to attack on three sides at once, the storming of the earthworks would have cost many lives. On the 3rd he moved his quarters again, to the establishment of some Turkish Bey near the covered bridge, and prepared to await the arrival of the troops at their designated positions, ready for the attack.

On the evening of January 3rd there were some lights visible in the direction of Sophia, but there was so much haze that it could not be distinguished whether they were camp fires or burning houses. It was an hour after mid-day on January 4th that a Cossack came riding in with a report that Bulgarians had arrived at the outposts with the news that Sophia was evacuated. Everybody had been nerving up for the battle of the next day, and no one could credit the truth of the rumour. In a few moments a second horseman came in, after a hard gallop, bringing official tidings that General Rauch was marching into Sophia to take possession. The plan proposed to, and accepted by the Porte, was thus at last being carried out at an immense sacrifice of life and property; and the retreat upon Constantinople had begun with the evacuation of Sophia. The occupation of this city is fairly described by the correspondent of the *Daily News*, who writes some wholesome truths regarding the meek Bulgarian. When he heard of the evacuation of the town, he says:—

"We were mounted and off at quick trot almost before the courier finished his report, and on the road we overtook a brigade of the guard marching with unfurled banners towards the distant mosques, singing as I have never heard them sing since I saw them cross the bridge at Sistova months ago, every man of them walking as proudly as if he alone had conquered provinces. They answered the salutation of the general cheerily and heartily. He paused only to charge them, with severity of expression in his voice that they knew meant prompt execution of his word, not to raise a hand to plunder on pain of severe and instant punishment, and galloped past to the city, already occupied by Cossacks and the advance guard of the column.

"The excitement of that half-hour's ride was worth the days of exposure in the mountains, the long and tedious season of waiting; still I am not sure that, with all the triumphant feeling, there was not a tinge of disappointment in the thought that we had not met the enemy, for the game of hide and seek among the mountains was getting wearisome. We had missed the opportunity of smashing the Balkan army, and it had slipped away to face us further south. As we neared the town the road was crowded with peasants hurrying in to have their share of Turkish loot, and scores of them were rummaging the deserted tents in the fields close by, and wrangling over the rubbish there.

"A crowd of several hundred citizens, led by priests, with banners, crucifixes, and lanterns, and bearing a salver with bread

and salt, offered these traditional symbols of hospitality to General Gourko, and then the priests and attendants headed the procession that filed slowly into the first narrow street. It was not the pictorial aspect of this triumphant entrance, nor the consciousness that this was an historic moment, nor, indeed, the sense of relief at the successful finish of the first great step of the campaign, that for the time fixed my thoughts, but it was rather the lack of heart in the whole business of the reception, the total absence of anything like frank and spontaneous joy in the crowd of Bulgarians who accompanied us into the town after the formal welcome at the gate. There were exceptions. Old men and women clasped their hands and wept for joy; intelligent citizens, of evident good standing in the city, showed by word and deed that they appreciated the change the arrival of the Russians would make.

"I do not mean to say that the people were not unanimous in their welcome of the Russian army; I only assert that the contrast between the reception by the Bulgarians and a similar welcome by any other people I could name was very great. A race without heart, their enthusiasm has scarcely a spark of the real stuff in it; and as we rode through the streets that day, the crowds gathered and gazed and hustled about, and looked as happy, perhaps, as Bulgarians can look; but not a cheer was heard—not even the murmur of gratification that one hears in the crowd at any *fête;* only a weary kind of listless satisfaction at the final arrival of the long-expected Russians was visible on the faces of those who welcomed us. What a contrast was there between the bronzed, sturdy soldiers of the guard and the pale and feeble-looking men of the town! What a picture it made, General Gourko and his staff following the banners of the church, and sweeping along through the crooked streets; the aides-de-camp in the fantastic uniforms of the winter campaign; General Gourko at their head, trim, straight, and emotionless as ever; the hustling crowd of men and boys in many-coloured costumes; on all sides the fez and the Oriental dress suggesting heat and sunshine; and, through this flood of colour, the cold grey rigid column of men whose type of face, whose dress, whose every motion, showed them to be of the north. On the one side, listlessness and inactivity, mental and physical; on the other, earnestness of purpose, energy, and physical strength. There is little in common between deliverer and delivered, except some similarity of language.

"Few houses on our route were not barred and shuttered, except those whose swinging doors and broken windows showed them to be already plundered. Out of the windows of some large houses were showered sprigs of evergreen from the hands of young women; there was a lively rush for the church, where a short ceremony was performed, and the triumphal entry was ended. The order in the town was perfect. A large patrol of soldiers walked the streets, preventing effectually the destruction of property and pillage. The Turkish quarter had already been completely sacked by the Bulgarians before the troops came in, and most of the loot was hidden away; but whenever any one was found with plundered effects he was promptly arrested, and the goods exposed in the streets under guard to be claimed by their proper owners. I made this a matter of special investigation, and scoured the city in search of plunderers and loot, and found not a single soldier with any article of value except a Kuban Cossack with a small carpet. I naturally supposed that this legitimatised brigand would sell his prize; and when I offered him a round sum for it, he replied, without hesitation, that he had taken it from a Bulgarian peasant, and was carrying it to deposit with unclaimed goods, and I watched him throw it on the pile with the rest. One of his comrades, however, was proved to have stolen watches and money from foreign doctors and citizens; and, by order of General Gourko, he was tied with ropes and led away and shot.

"This is not the first time that I have entered a city with victorious troops; but it is the first occasion in my experience when order was the rule, plunder the exception. To be sure the shops were all rifled before we came in; but the Bulgarians had to be hunted out of the houses on all sides. There was plenty of clothing and other articles the soldiers were greatly in need of, which were collected together by the troops, not distributed among them; and the disorder, if any existed, was only momentary. The only approach to anything like violence that met my notice was the knocking the fez from the heads of the citizens; and in this sport of doubtful taste I saw some officers thoughtlessly take part.

"The church where the religious ceremonies were conducted is next door to the hospital of Lady Strangford; and this was the first place General Gourko visited, simply presenting his compliments to the lady, and assuring her that she would be protected in her work. Beside Lady Strangford, her four female nurses, and Dr. Stephenson, the surgeon of the hospital, there also remained at their posts Doctors Wattie and Busby of the Stafford House detachment, and Ruddock and Macpherson of the Red Crescent, with dressers. From these I learned many interesting details of the evacuation. The town had been in considerable disorder for several days, for the Russians were expected to arrive a week earlier: in fact, the first question put to me by the doctors was, 'Why were you so long on the road?'

"Suleiman Pasha had made a flying visit here about Christmas time; but no one knew he was here until he was gone. From the day the road was cut there was no longer any idea of defending the town, and the troops formed their battalions in the streets on the evening of the 3rd, and left quietly. The signal of the evacuation of the troops was also a signal for the flight of those Turkish families who had not yet departed; and the clumsy arabas, laden with human beings and household goods, piled in promiscuously, creaked over the frosty snow toward the line of retreat, which took the direction of Radomir. There were few enough transports for provisions and ammunition, so the wounded were ordered to quit the town the day of the retreat; and such of the poor wretches who could crawl away, left the hospitals and dragged themselves towards the hills. Terror inspired by the tales that the Russians would massacre all their prisoners, gave them strength to begin their journey. Between 5,000 and 6,000 thus fled, the majority of them probably to die in the snow before the next day.

"There were less than 1,000 wounded left in the town after this wholesale evacuation, so the surgeons in the Turkish service drew lots to decide which ten of their number should remain. This was a large proportion, as there had been but about thirty in charge of the thousands here. Among the ten who remained are one Englishman, one American, and two or three Germans. It is said on all sides that the order had been received from Constantinople to burn the town, and blow up the mosques which were stored with powder. I do not know whether this is true or not; I only am sure that a printed order was issued to each Bulgarian family to leave the town, accompanied with the verbal message that they took upon themselves the responsibility of remaining. There was no systematic attempt made, however, to burn the place; and although the Bashi-Bazouks set it on fire in several places, but few houses were burned. Some of the shops had been deserted long ago by their proprietors, and the rest of them were gutted and the loot distributed during the withdrawal of the troops. Everybody took whatever he could lay his hands on, the magazines were broken open, and the Bulgarians all armed themselves, and did not hesitate to use their new toys.

"The fears of the wounded Turks were not altogether without foundation; for during the night many of them were murdered while the Russians were still miles away; and the same fiends who cut the throats of the helpless victims, welcomed the next day the Russians with an innocent smile, and called them brothers. Household goods and provisions strewed the streets, trampled into the snow by the passers-by, and it was a night of confusion. The Europeans who remained in the town feared alike Circassian and Cossack, and prepared to defend themselves against the irregular soldiery. At daybreak there was scarcely a Turkish soldier in the town; and the Bulgarians, assembled from the neighbouring villages, completed the desolation that had begun in the night. The morning passed slowly, and still no Russians in sight. The English doctors gathered as many of the deserted wounded as they could care for, and carried them into their hospitals. Finally, shortly after ten o'clock, a single Russian officer, accompanied by two Cossacks, rode along the road towards the town. His first inquiry was, 'Have you any sugar?' and, being answered in the affirmative, he rode into the town about as calmly as if he had come solely in search of the much-desired luxury. It was four hours later before General Gourko came in, as I have described above, and order was already restored.

"We had been hearing, all the way down from Plevna, reports of the great numbers of sick and wounded in Sophia. What would have become of them if the foreigners had not stuck by them I dislike to conjecture. The soldiers had been on short rations for days, and bread was a necessity for them.

Immense quantities of flour and meat, both salt and fresh, and other provisions, were found in the stores here; but the public ovens that made bread were too few to supply the demands of the soldiers; and no measures were taken to requisition private ovens; consequently, the bakers who had furnished the hospitals refused to take any orders from them, afraid of compromising themselves with the Russians; and up to the evening of the third day of the occupation the wounded were without bread. The majority were supplied with food enough to sustain life out of the private stores of the doctors: many suffered from hunger; a few died from insufficient nourishment; and the Bulgarian attendants having deserted almost to a man immediately after the occupation, it was only with great difficulty that the wounds were dressed. These wretches of attendants took the opportunity of robbing the wounded of all their money and valuables before they deserted, thus adding one of the most brutal of crimes to their cowardly desertion, and completing the list of dastardly acts which I am obliged, in strict justice, to enumerate.

"On the morning of the fourth day of occupation rations were distributed to the wounded; the Russian doctors had already begun work, and the hospitals were taken in hand. It is possible that the sufferings of the wounded have been exaggerated; but as eighty died in the Konak in a single night, it appears to be proved that they were neglected. The question of what should be done with the foreigners found working for the Turks was not settled in a hurry. No one, in fact, seemed to know what would become of them. Up to date, those who were actually in the Turkish service, serving under contract for the war, are still in ignorance of their fate. Lady Strangford has been treated with every consideration and respect, and would have been provided with means of transport if she had decided to return to the Turkish lines again. She, however, with her entire suite, will continue her work here, and the surgeons of the Stafford House and Red Cross also remained with her."

The day before the evacuation of Sophia, and its occupation by the Russian troops, General Gourko decided to open communication with the Servians at Pirot, and sent Prince Tzeratleff to General Horvatovitch's head-quarters. He found the main body of the detachment, the Timok corps, still at Pirot, but about to move southward upon Vranya. The capture of Pirot had been attended with little or no disorder; the Turkish property had been confiscated, and the army was living on captured provisions, and had plenty for a number of weeks. Pirot was taken after a fight of a whole day, with the loss of 250 men; twelve cannon were captured. Being assured from attack in his rear through the presence of the Servians, General Gourko did not lose any time in Sophia; but after a stay of four days, during which he re-formed his troops and took measures for the security of the forces remaining in Sophia, he left, on January 9th, for Philippopoli—the same day that, further east, General Radetzki and General Skobeloff effected the capture of Schipka in consequence of a turning movement which took the Turkish army in the rear, and forced it to surrender after a sanguinary contest, during which the Russians lost 5,500 killed and wounded, whilst the Turks lost 32,000 prisoners and ninety-two guns.

Skobeloff, the second day after the battle, marched for Hermanli, the junction of the Philippopoli and Yamboli railways, forty-five miles from Adrianople, with two divisions—the 16th (his own division), and its twin, the 39th of the fourth corps, together with two brigades of eight battalions of sharpshooters. Brigades of cavalry of the 3rd division, under the command of General Kartsoff, marched upon Philippopoli by way of Kalofer and Karlovo. Radetzki's corps, to which the 15th division had been added, followed Skobeloff as far as Eski Zagra, and marched upon Tchirpan, east of Philippopoli, evidently with the intention of surrounding that place, in co-operation with the 3rd division, marching by the Karlovo road; and thus to cut off the Turks at Ichtiman, defending that pass against General Gourko.

The Turks, by this movement of Radetzki and Skobeloff, had the whole valley of the Maritza cut off behind them. In this way the retreating army of Sophia, as well as the Philippopoli forces, had no escape but by throwing themselves into the Rhodope mountains, where there were no roads, and where they were, at any rate, certain not to be seriously molested as long as the Russians were engaged in their advance on Adrianople.

Meantime, whilst Skobeloff and Radetzki were capturing the Schipka army,

General Gourko set out from Sophia, his forces following the three roads which lead from Sophia to Philippopoli. General Krüdener was sent along the road skirting the base of the Balkans to Zlatitza, where he found no Turks left, all having fled after the disaster at Schipka. General Weliaminoff was despatched along the road which runs southwards to Samakovo, and thence south-east *viâ* Banya to Tatar-Bazardjik, where it joins the central road from Sophia, which winds through the Ichtiman Pass and Trajan's Gate. Along this latter road General Schouvaloff was sent in advance, Generals Gourko and Rauch following on the next day by the same road. It was in this Ichtiman Pass that the Bulgarians attacked and murdered Baldwin, Earl of Flanders, during the Crusades. This time, however, the Bulgarians had not had the opportunity of exercising their peculiar talents; for when the Russians arrived, pillaged shops, smouldering ruins, and empty houses welcomed them to Ichtiman. Many of the largest buildings had been burned by the Turks; not a shop but was sacked and gutted, and very few of the inhabitants remained. Here the Russians learned, much to their surprise, that the Turks had evacuated their positions in the pass called Trajan's Gate, and were retreating southward, pursued by the dragoons; also, that Weliaminoff's column had been fighting for a whole day north of Samakovo, driving the enemy from one little earthwork to another, until he was stopped by the arrival of a messenger from the Turkish lines with a despatch from Constantinople, announcing an armistice. The Turkish outposts had refused to fire; the men had approached and shaken hands with them, and the Turks had called them brothers, believing that peace was declared.

Such was the report of the armistice, and it was further strengthened by the appearance of a Major Zéki, the chief of staff of Suleiman Pasha, who had come with a sealed despatch addressed to the grand duke, declaring also that an armistice had been agreed upon. General Weliaminoff had replied to the Turkish proposition for cessation of hostilities—"If you don't want to fight, leave Samakovo; for my men can't stay up here in the mountains;" and the Turks quietly went away. But before the messenger whom General Gourko had sent to telegraph for instructions regarding the armistice could have arrived, a courier came in with a message from the grand duke, saying that there were false rumours of an armistice, and that the army was to push on as rapidly as possible. The truth was, that the armistice was agreed to, but had not been actually signed, the Russians not wishing to stay their progress towards the capital; and then succeeded a consequent stage of indecision, which was scarcely war, though quite as bad. Thus Major Zéki was told that there was to be no halt in the movement. It was rather an odd sight to see the two Turkish dragoons who escorted Major Zéki, with their Winchester rifles slung on their backs, fraternising with the Cossacks; and it puzzled the few Bulgarian spectators to see a Turkish bimbashi in full uniform, with his sword on, on easy terms with the Russian officers, who invited Major Zéki to dine in their mess. He had the frankness to say, when he was served with plain boiled rice after the cabbage soup—"I had imagined the officers of the Russian army lived in much greater luxury."

Some one replied—"It is only by your kindness in leaving plenty of stores behind you that we have even these provisions."

This was Zéki's first experience among the Russians; and doubtless, from this little incident, he understood what it was to be with a great army cut loose from its base of supplies, and began to comprehend the happy-go-lucky way the Russians had of doing everything.

A day or two later, Major Zéki, who gained many friends from his sympathetic disposition and pleasant manner, received instructions from the grand duke to present the despatch, the contents of which had already been transmitted by wire, in person at the head-quarters in Kezanlik, whither he went with his two dragoons, escorted by an officer of the staff and two Cossacks, to the complete mystification of the people they met on the road. One thing Major Zéki remarked with a great deal of justice, that the Bulgarians treated the Russians with actual disrespect, and paid no regard whatever to their requests or demands, while to the Turks they were all attention. It was curious to observe how the natives sprang to wait upon the Turkish officer, even while he was in company with the Russians.

Continuing their march after the departure of Major Zéki, the Russians literally scrambled all the way over Trajan's

Gate. The road, which mounts the northern declivity in a succession of steep zigzags, was as smooth as a skating-rink, and was filled with infantry and artillery. Men slipped and slid, horses fell with their riders, the heavy caissons swung from one side of the road to the other, often in imminent danger of dragging the horses over the precipices. From the summit of the pass the view was very wide, embracing the valleys of Ichtiman and Banya no one side, and a large portion of the Rhodope range of mountains to the south, beyond the plain of Philippopoli.

The whole descent was a series of dangerous slides. Occasionally the horses would slide for many yards, only bringing up against the bank on the side of the road, or among the bushes. The limited supply of iron had obliged the farriers to put on the smooth flat plates used by the Turks instead of the European shoes; so that the horses, unaccustomed to their new shoes, skated, awkwardly enough, wherever the ice was smooth.

At last, towards evening on January 12th, the Russian New Year's Day, the tired and worn-out forces reached Vietrena, about fifteen miles from Tatar-Bazardjik, already burning in the distance. At the same time, a black line of troops, retreating before General Weliaminoff, was seen moving rapidly along the Samakovo road from Sophia, towards Tatar-Bazardjik. No infantry had come up, so it was out of the question to attempt immediate pursuit, and the advance guard celebrated in rather a mild manner, for the material means of merry-making were decidedly meagre, the Russian New Year's Eve. A distinguishing feature of the celebration was a mass, conducted in General Gourko's head-quarters by the priest of one of the regiments, the staff officers contributing the vocal music and sonorous responses. It was clear and frosty, and until long after midnight the cannon rattled and jolted heavily down the rough street, and the infantry tramped wearily past to find out but little better halting-places in the plain than those who were obliged to bivouac away up the road in the pass.

About half-way from Vejtrenova to Tatar-Bazardjik, the highway crosses a low hill, the last notable interruption of the level line of the road for many miles eastward, and this hill terminates in a rocky knoll, two or three hundred feet above the plain. A more advantageous position to witness a battle could not be imagined, for the whole plain for miles lay below, like a plan of the surface in black and white; and when at daybreak the Russians saw the Turkish army, drawn up in perfect battle order across the road between them and Tatar-Bazardjik, still burning in a dozen different places, they could scarcely wait for the infantry to get up; indeed it did not get up until after the firing began, for a couple of 9-pounders were sent down the road far in advance of the outposts, with only a handful of Kuban Cossacks as a support, and began to throw shrapnel into the group of Circassians gathered there.

The Kubans scattered out right and left, and trotted away to meet the Circassians, who were ready to welcome them. For a few moments there was a lively little fire, and then they began to stop and look at one another. The whole plain about Tatar-Bazardjik seemed alive with Turkish cavalry; large squads were moving here and there; long lines were filing off to the right and left; and besides these movements, preparatory to receiving the expected attack, the infantry strung out in long double lines of skirmishers.

The Russian infantry soon came over the hill in small detachments, marched right up to within gun-shot of the Circassians, who hesitated and drew back at their approach, and then the riflemen lay down in the ditches. But no serious attack was made, General Gourko preferring to wait for the arrival of General Weliaminoff by the Samakovo road, to goading the Turks into a desperate fight. Thus the day passed away.

The only break in the monotony of the day was the sending of a flag of truce into the Turkish lines with a letter which had been sent by Major Zéki to Suleiman Pasha. Prince Tzereteleff was chosen to carry the letter; and, accompanied by a trumpeter and a Cossack, who carried on his lance two handkerchiefs tied together by a corner, he rode down the road. As Tzereteleff had been fired on last summer near Kezanlik while on a similar mission, and had barely escaped being killed, the Russians watched with great interest the little group draw nearer and nearer to the Turkish outposts, until they were within a few rods, and then at last they saw three horsemen come out to meet them.

It was perfectly evident that the open

preparations for resisting an attack along the road, were only to cover the retreat of the army; and, just as expected, by daybreak on the 14th the town was completely evacuated. The bridge on the road was broken, but not seriously injured; but the one over the Maritza, between the town and the railway station, was entirely burned. Two or three wretched-looking Bulgarians fawned on the Russians as they entered the city; but the streets were otherwise almost entirely deserted, and barricaded with broken cases, shutters, and the confused *débris* of the shops; so that had the Russians not wisely refrained from attacking the night before, they would have incurred very serious losses. Every house was open and gutted. Bedding, groceries, furniture, small wares of all kinds fairly paved the streets leading toward the railway station, marking the flight of the Moslem population. The bright sun, shining through clouds of smoke from a hundred burning houses, lighted the scene of destruction and devastation with a reddish glare; and here and there a dead body, with pools of blood still fresh about it, completed a perfect picture of war in its most tragic aspect.

Before the Russians had been in the town half-an-hour, the ox-carts, with the household goods and families of the Bulgarian citizens, began to pour in from the fields, and on the other side of the river gathered a great crowd of fugitives waiting to be ferried back. The railway station was crowded, and thousands were swarming all about it, half wild with fright. The Turks had forced all the families to leave the town, in view to a possible attack by the Russians, and they were all hustled to the railway station; such as there was time to take were carried off, many were compelled to follow the army, and not a few took their own direction in the confusion, and returned when they heard of the Russian occupation.

Some three-score prisoners were gathered up in the town, many of them wounded by the sabres of the advance guard of cavalry, who followed close on the heels of the retreating enemy. There was one rather amusing capture while the Russians halted in the town. A priest of one of the regiments went into a house, and had a fire lighted to make some tea. As the house was not entirely plundered, he thought he might find some sugar in a cupboard near the fireplace; but instead of sugar he found a Turk with his rifle across his knees, curled up in the small space between the door and the wall. Mutual surprise and mutual fear! But the priest recovered first, and ordered the Turk to give himself up, which he promptly did. While he was drinking his sugarless tea, it occurred to the priest to look in another cupboard, and an exactly similar result followed, and he had the honour of turning over two prisoners to the guard!

That evening the camp fires of the retreating army blazed on the hill-sides beyond the railway, exactly opposite to the Russian lines and the Maritza, and perhaps a couple of miles of rice-fields separated the two armies from one another. The night was bitterly cold, and a piercing wind was blowing; but it was decided that the river must be forded; so Count Schouvaloff crossed with several battalions of infantry, and started immediately in pursuit of the rear-guard of the Turks, which was still moving on, followed by a long line of stragglers. The river was full of ice, and the current was so rapid, that the men, breast-deep in the water, could scarcely keep their feet. In their drenched and freezing garments they formed battalions on the right bank, and pushed on cheerfully after the enemy until late in the night, when they bivouacked in the village of Adakoi.

The columns of Schilder-Schuldner, Krüdener, and Weliaminoff, had all descended into the plain during the day, the latter somewhat behind its assigned position, and the detachment of Count Schouvaloff, which was intended to be the central column, in reality leading. Although the Turkish army was so near, it was playing such an active game, that it was extremely difficult to keep up with it. Of course, General Gourko did not intend to attack it, because, as it was evidently demoralised, its end was certain, and it would have been foolish to sacrifice two or three thousand lives to accomplish a result which time would bring about. When Count Schouvaloff's detachment moved out of the village of Adakoi just before daybreak, prepared to follow the Turks, who were supposed to have fled in the night, it ran plump upon the enemy quietly waiting there in position between Karatair and Kadikoi, admirably protected by a little stream which had cut a narrow but deep channel in the earth, quite impassable for any troops. The Turkish right rested on the road in the village of Ahrianli, so that the hill behind

Kadikoi was really the centre of their position. With this voluntary movement on the part of the Turks, the object of Schouvaloff's movement was accomplished; the enemy had paused in his retreat, and the thing to do next was to keep him busy while a column had time enough to turn him by his right flank, thus blocking his retreat towards Philippopoli.

Count Schouvaloff got his men under such cover as the nature of the ground afforded, and began a lively demonstration, and a hot musketry fire was interchanged. Just about the time this began, General Gourko, who had started away from the village of Doghankoi, where he had passed the night, long before daylight reached the point where the river and the road almost meet, very near the village of Ahrianli. Whilst the staff were watching the smoke rise from Philippopoli, and the troops as they marched along the road, three horsemen rode out of the grove upon the opposite bank of the river; one of them drew his revolver and deliberately fired it three times in their direction, and then turned and quietly trotted away, followed by the second, while the third remained there still looking at the Russians. He was dressed in the Circassian costume, and there was a brief moment of doubt whether he was not, after all, one of the scouts of Schouvaloff's column; but in an instant the Kuban Cossacks, who had an instinct for distinguishing the enemy, were kneeling along the bank and banging away at the Circassian. When the fire began he saluted, wheeled his horse round, and slowly retired, evidently caring no more for the buzzing of bullets than for the singing of so many mosquitoes, and chuckling all the time at the wild firing of the Russians, who certainly did not distinguish themselves on that occasion, although the mark was not half rifle-shot away.

It soon became clear the village opposite was full of Turks, who clustered like bees about the houses there. It was a raw, blustering day, and it seemed a pity to order the men to wade the river, which was rushing along, covered with bits of floating ice; but a ford was found a couple of hundred yards above the Russian position, and a battalion waded across and got in and at work in a few moments. After this operation, General Gourko, at the suggestion of Captain Scalon, of his staff, ordered the dragoons of his escort to take the horses of the officers and carry the rest of the soldiers across the stream on horseback. When they rode down the 200 yards towards the ford for this work, the bullets were already falling fast. The road, which had been crowded a short time before, had been well cleared; a battery was at work a little further on, and the Turkish shells began to plough up the rice-fields, the muzzles of the Martinis pumping out the bullets like hail. The lead knocked up the snow all around, and there was a buzzing in the air that made the men involuntarily quicken their steps. The firing was not very heavy, but it was effective, for ten out of the sixty horses which carried over the last two battalions, were wounded in the space of about an hour.

When these two battalions got into the village, the music of the fight took a higher key, and there was a constant, ceaseless rattle all day long. Late in the day General Schilder-Schuldner came up to consult with General Gourko, who had been for hours anxiously awaiting the arrival of the column entrusted to the former, which had been ordered early to cross the stream below, to make an attempt to turn the enemy's left. Hours were lost in waiting for this detachment; and at last, instead of the infantry, there only came the old general himself! But the delay was shortly ended, and the troops came past at quick step. One or two of the soldiers were wounded in sight of General Gourko, for the bullets were still flying about promiscuously, and the squadron of dragoons that was detailed to carry three battalions across the ford, lost three or four horses and men during the passage. The entire loss of the day was about 300, a large proportion of Schouvaloff's command.

Krüdener's detachment, which had gone towards the town, had met with little resistance; but arriving on the bank of the Maritza, found the bridge completely destroyed. A couple of old brass muzzle-loading cannon, on the rocky hill in the centre of the town, blazed away the whole day at the Russians, and there were a score or two of Turks sitting on the hill and firing lazily, with little effect, and others in the streets. But though the loss in Krüdener's column was only six, not a man of his force got into the town.

The same squadron of dragoons of the guard which had carried three battalions over the river, returned to General Gourko;

and Captain Bourago, who commanded the squadron, reported that the men were wet, hungry, and cold, the horses fatigued and without food, and asked for further orders.

"Go and join your regiment," said General Gourko.

"It is impossible to find the bivouac in the night, your Excellency," was the reply.

"Then, suppose you go in and occupy Philippopoli; you will find good lodgings there," suggested the general, more than half in jest.

"Is that your order?" eagerly asked the captain.

"It is!" came promptly back in reply, and the captain saluted, mounted quickly, and, forgetting fatigue and cold, led his squadron towards the zone of the enemy's bivouac-fires all along the plain between the river and the mountains, and went away at a trot.

The adventures of this little band are worth relating. When they came within half a mile of the fires they halted, and scouts were sent forward to report on the probable number of the enemy; but they returned, in the course of an hour, with the news that the bivouac was empty, and that the fires were left burning to deceive the Russians. Then the squadron trotted away in the darkness towards the black mass of the lesser one of the two granite hills that tower over Philippopoli—landmarks in the unbroken plain for many miles.

Near the town another bivouac barred the path—this time in a field enclosed by a ditch and bank of earth. Leaving the horses to be led in groups of six to a single man, Captain Bourago and the rest of his force reconnoitred on foot up to the bivouac, and peered over the wall to hear the last of the Turks go away in the distance. The fires were only deserted a few moments before the dragoons arrived. Mounting again, the dragoons, with the platoon of singers at their head, marched into the streets of Philippopoli, waking the inhabitants with the unaccustomed music. Everybody was of course surprised and delighted at the arrival of the Russians, and half the population turned out in their night-dresses.

One of the consuls met Captain Bourago, and begged him to enter his house and take a cup of tea. Over the tea he put the natural question—

"How many men are here?"

"Oh, very many—an immense force."

"But I mean here in the city," repeated the consul.

"Why, we have got a whole squadron of dragoons!"

"Then, if you value your lives," said the consul, "you will lose no time in trying to escape, for you are surrounded on all sides."

With only a moment of hesitation, Bourago ordered his men to mount, and marched away towards the station, where the enemy was reported to be strongest.

It was then past midnight; the great piles of stores and several houses were burning at the station, and just beyond could be plainly distinguished, by the light of the fires, a great mass of Turkish soldiers in some disorder. In the same formation as before, the dragoons advanced with great precaution, and reached a ditch within short range, concealed themselves in it, and opened a scattering fire, cheering and shouting with all their might.

Volley after volley answered their fire; but the bullets passed over their heads, and they began to shoot with all possible rapidity, taking careful aim. The terrific fire of the Turks grew weaker and weaker, and finally melted away, and sounded further and further off. Then was the moment to charge, and the squadron mounted and went away at a gallop after 1,500 retreating Turks, sabring those who did not immediately give themselves up, and capturing over fifty prisoners. Surrounding the burning station with a guard, Captain Bourago entered it, and found three consuls there with several of the railway *employés*, and learned that a short quarter of an hour before, three pashas were standing there, waiting for a supper to be prepared. It need hardly be remarked that the officers of the squadron enjoyed that supper very much. Count Rebender, who, with Lieutenant Pijoff, had been very active through the whole affair, was given a platoon to clear out the nest on the hill, which he did in short order, and the squadron slept in the town.

Philippopoli was in a frightful state. For just one week there had been a reign of the greatest confusion. On the 8th of January a telegram had been received from Suleiman Pasha, ordering the city to be evacuated of all its inhabitants, because he intended to burn it on the approach of the Russians. On the following day, news came from the same source that an armistice of two months had been arranged. The

Christian schools began again, and business was to some extent resumed, but only a few shops were opened for fear of the Circassians and Bashi-Bazouks. The Turkish families continued to flee, transporting all their household effects to the station, to be sent to Constantinople. Frequent trains were run, carrying thousands of passengers, loading the roofs, the steps, and even the buffers of the carriages with a living freight. Provisions were thrown away or sold for trifling sums. A yoke of oxen only brought one Turkish pound; a cow eight piastres (1*s.* 4*d.*), and a sheep four (8*d.*)

On the 10th of January the last passenger train went away; but immense piles of goods and household effects still remained at the station. Orders came from the medical director at Constantinople to remove all the sick and wounded (numbering 850) to the station, to await a train which would be sent to carry them away; and this order was executed with as little stir as possible, for fear of augmenting the disorder. The consuls, English, French, Italian, Greek, and Austrian, met and consulted about the best measures to protect the inhabitants, and decided to stay, and to pay no attention to the order to evacuate the town, which had been repeated. The Circassians and Bashi-Bazouks having begun promiscuous plundering as early as the 12th, the authorities in the Greek Church issued 150 muskets to the citizens of that nationality, to protect themselves from the irregular soldiers; but, of course, there was no authority, civil or religious, which could stop plundering, or prevent incendiary fires. On the 14th, before daylight, the bazaar was in flames, and the Russian cavalry being near, the bridge was burned, to prevent them entering the town.

The story of the next day has been already told. When the Russians entered on the 16th, it was a picture of ruin and destruction all along the streets where the shops were, and was smoking in a dozen places. It was rather a ridiculous sight to see a whole army corps wasting precious hours idly watching the smouldering timbers of the bridge, and the rushing, ice-choked stream that separated them from the opposite shore, where thousands of Bulgarians were frantically shouting and gesticulating. The staff rode down to the river bank, and there halted, waiting for a small leaky boat that was coming across, when, whether in derision of the inaction of the soldiers, or whether due to the impulse of a half-cracked brain, a sturdy Bulgarian stripped and plunged into the icy water, and half waded, half swam, across to the Russians, blowing like a porpoise. He had nothing particular to say, so he was wrapped up in a rug, and sent away to warm himself.

Prince Tzereteleff crossed over in the skiff to arrange about the bridge, and in a few moments there was a rope sent across, and a rude ferry established. Mr. Petline, the delegate of the Princess Imperial Red Cross Society, was the only engineer who happened to be present, and he undertook immediately the building of a solid structure out of railway iron and planks. The Bulgarians were in a state of the greatest excitement; most of them were armed, and those who came over in the skiff so far lost their heads as to rush down to the water's edge and take deliberate aim at Prince Tzereteleff, who was walking, in his Circassian costume, among the people on the opposite shore, and they would have fired if they had not been suddenly brought to their senses. This was the first time the Turks had taken the trouble to hinder the Russian advance by burning a bridge, and the Bulgarians began to construct a foot-bridge on the bases of the piers, and a few enterprising boat-builders soon began hammering away in a lively manner on some scows they were making to serve as a ferry. One ford was tried; but several men got a ducking, and one horseman was swept down stream. Before long, however, a shallower place was found, and the crossing was at last effected, with the ice knocking against the horses' shoulders and the saddle-flaps.

When Prince Tzereteleff came into the town, he found only two or three marauding soldiers there, for the dragoons were already off to new fields, and he constituted himself a special police force to stop pillaging until enough soldiers crossed to form a patrol. In the Stafford House hospital there were two of the Stafford House committee-men, neither of them Englishmen, and two young English doctors in the Turkish service. The hospital was nearly full of wounded Turks, and all the available force was employed in bringing them up from the station, where they had been starving for days, huddled together in a temporary wooden building, without attendants, with neither food nor water. Many of them had died of starvation and neglect, and the rest were in a miserable state altogether. The

single word "ekmek" (bread) caused a general cry of joy. A hundred bony hands were stretched out; sunken eyes glittered with delight; those strong enough to move, raised themselves on their elbows, and begged for a morsel. While the biscuit was circulating, one after another of the poor wretches held out a water-jug or a canteen, for there was not a drop of water in the place, and had not been all day.

The sound of wrangling, and blows of axes close by, betrayed to the experienced ears of the *Daily News* correspondent, that the beautiful Bulgarians were at their usual work. There was a whole crowd of them, who had got into the store-room of the hospital, where medicines in bulk and a few provisions, like rice and butter, were kept, and were smashing things right and left, and fighting among themselves for the loot. They scattered when the correspondent came upon them in the twilight, but he halted there as many of them as he could surround, and herded them into the hospital, loaded them with jugs and canteens, and started them for water.

There was considerable firing still going on at no great distance, just in the direction of the spring, and the Bulgarians were not ambitious to distinguish themselves under fire; but having noticed the muzzle of an easy-acting revolver looking for some one in their vicinity, they thought the safest plan was to bring the water, and did so in haste. But one of them had a half revenge later in the evening; for as the correspondent was passing an open space in the street, he heard a splutter and a bang, and then a whiz close to his head, and it was evident that some one had sighted him with an old flint-lock. He did not find the fellow, and thought it prudent not to make too careful a search for him, for there were probably a couple of horse-pistols and a yataghan in the would-be assassin's sash, and he had the advantage of being in ambush.

Meantime, after the Turks had abandoned Philippopoli, they took up a position under Fuad Pasha, a few miles south of the city, to cover their retreat to join the fugitive army of Suleiman Pasha, which had succeeded in effecting its escape along the Stanimaka road into the Rhodope, or Despoto Dagh.

The battle-field was not more than an hour's ride distant from Philippopoli, and from a neighbouring mound the fight could be plainly seen. The Turks were firing from the vineyard terraces at the foot of the hills, and waves of musketry swept from one end of the line to the other. But the rifle-fire was not the hottest where the sharpest work was going on, for the Turks charged impetuously down the slopes, and bayonets and sabres were crossed in hand-to-hand fight. In point of fact, the Turks were fairly at bay; for after slipping away between the columns of Schilder-Schuldner and Weliaminoff, they had halted, completely exhausted, on the hill-sides south of the city. Dondeville had hurried up across the Maritza and flanked them on the right, Schouvaloff and Schilder-Schuldner were pushing them in front, and Weliaminoff was crowding them on the left. Behind them were the bleak mountains; on three sides of them an enterprising, fearless, tireless enemy; and they resisted in their last ditch with desperation, fighting like lions in their lairs.

The whole of January 16th the fight continued without intermission, the Russians gradually gaining ground as fresh forces came up, and succeeded in capturing eighteen cannon, through a flank movement carried out by General Dondeville, on the following morning, January 17th. The Turks charged down the slope with the bayonet in a mad endeavour to recapture the eighteen cannon left in Dondeville's hands the day before. One of the commanders rushed into the thick of the fight with Dondeville's troops, was surrounded, and is reported to have killed and wounded seventeen Russians with his own sword before he was finally cut down. But this headlong assault was stoutly resisted. General Krasnoff especially distinguished himself at the head of the brigade of the 3rd division; and that day twelve additional cannon were abandoned by the Turks as they retreated sullenly from one terrace to another; and when, after a most heroic and hopeless resistance, the disorganised, exhausted, famished, half-frozen remnant of an army could hold a bold front no longer, it broke up into small bands, and under cover of darkness dispersed back in the mountains, leaving the remaining twenty cannon on the field.

This was the last stand made by the Turks against General Gourko's victorious forces. Further east, General Radetzki and Skobeloff, hearing of the proximity of General Gourko to Philippopoli, had turned their backs upon that city and proceeded

to Adrianople, which was occupied by their forces on January 20th.

The news of the collapse of the Ottoman army soon spread over the country; and abandoned to the mercy of Russian and Bulgarian—Christians—the Moslem population, knowing that they would seek for justice, pity, or generosity in these quarters in vain, thought but of escaping from their invaded homes. All the way from Philippopoli to Hermanli, a distance of seventy miles on the road to Adrianople, the road was strewn with the household goods of many thousand families and many thousand bodies. It was one ghastly, sickening panorama of death in every form, and of such colossal proportions and horrible character, that it was quite impossible for any one who had not witnessed part of it, to conceive, in the most moderate degree, the nature of the diabolical drama.

It was along this road that the great mass of the Turkish families fled from the villages at the approach of the Russians. Fugitives from the entire territory, from Plevna to Philippopoli, were for weeks, and even months, endeavouring to make their way to Constantinople, the haven safe from the pursuit of the Muscovite. How many thousand families had gained the vicinity of Stamboul before the rapid advance of the Russians it is impossible to estimate. It is certain that the long trains of fugitives blocked all the roads of the Turkish retreat, and seriously hindered and even stopped the march of the troops. After the investment of Plevna, and even before, there was a general exodus to the southward from all the towns threatened by the Russians, and hundreds of trains concentrated by converging routes in the valley of the Maritza, the tide being naturally directed towards Constantinople. As the Russians advanced, they never found any Turkish families in any of the villages; and it had been a long-unanswered question what had become of the population; but a journey along the road from Philippopoli to Hermanli, depicted, in part, the sufferings of these people, and furnished some adequate idea of the multitude of the Mussulman inhabitants who fled panic-stricken before the Russians and Bulgarians.

As the Russians left the rocky hills and picturesque city of Philippopoli on the morning of the 23rd, and rode eastward along the road, the first thing that met their eyes was a number of bodies of Turkish soldiers lying in the road, crushed by the wheels of passing artillery, and trampled into the mud by the feet of many horses. Before they had gone half-a-dozen kilomètres, the corpses of peasants, both Turkish and Bulgarian, were to be seen lying on the snow, and some of them had already been exposed to the weather for two or three weeks. Some had blood-stains still fresh on their garments. Dead horses and cattle blocked the path at every few steps, averaging two to the distance between the telegraph posts; and as one went further and further away from the city the number rapidly increased, and hundreds of abandoned arabas stood in the road, and choked the ditches alongside.

The road, too narrow for the immense trains that had passed over it in hasty flight, was supplemented by beaten tracks through the rice-fields on each side; and there were traces of bivouacs in the snow, which became more and more frequent, until these side-paths were almost literally carpeted with the *débris* of camps, and lay between rows of dead animals, broken arabas, piles of rags and cast-off clothing, and human bodies, for thirty-five miles of the whole of the first day's ride from Philippopoli.

There were bodies of Bulgarian peasants with terrible wounds in the head and neck, sometimes mutilated and disfigured; women and infants, children and old men, both Turkish and Bulgarian, fallen in the fields by the road-side, half buried in the snow, or lying in pools of water. It seemed to have been one long battle between the peasants of both races, in which the dead were counted equally for each; but while many of the bodies bore marks of violence and showed ghastly wounds, the great proportion of the women and children were evidently frozen to death, for they lay on the snow as if asleep, with the flush of life still on their faces, and the pink skin of their feet and hands still unblanched. Side by side with these, many corpses of old men, full of dignity even in death, lay stark by the road-side, their white beards clotted with blood, and their helpless hands fallen upon their breasts. From the muddy water of the ditches tiny hands and feet stretched out, and baby faces half covered with snow looked out innocently and peacefully, with scarcely a sign of suffering on their features. Frozen at their mothers' breasts, they were thrown down into the snow to lighten the burden of the poor creatures who were struggling along in mortal terror, but soon afterwards to be frozen to death in the severe weather, for they had been travelling in miserable arabas without food or shelter, and with half-starved oxen. Miles of these araba trains were passed on the road, human beings and household effects jumbled in promiscuously. Upon the jolting carts bedding and utensils were piled. Women and children upon donkeys and cattle followed alongside; and behind, for miles, was a long trail of wretched, weary, half-dead stragglers; old men and women bent double, crawling along with the aid of crutches or sticks; mothers with infants at their breasts, scarcely moving one foot before the other—all this after long months of flight, constant exposure, continuous dread of marauders, and the hated Muscovites. There was one mother leading along a sick child of perhaps ten years, a mile or more behind one of these trains. The poor girl could with difficulty balance herself on her naked, half-frozen feet. Night was coming on, and the cold wind that chilled even men in their warm clothing, blew about the rags from the suffering creature, disclosing emaciated limbs and skeleton body. The mother was in quite as pitiable a condition. Her face and head alone were well wrapped up. The araba train was moving slowly out of sight on the distant hills. A night on the road meant death to both these unfortunates, and their straggling friends could give them no assistance, because they were for the most part in a similar state of misery. The mother dragged her little one along, fast losing patience as the darkness came on, and finally pushed the sick child into the snow by the road-side, and hurried on without looking behind her. This was one of a series of similar scenes that were enacted before the very eyes of the Russians.

At Kuru Tchesme, half-way to Hermanli, there was nothing but a collection of empty buildings and barn-yards. Like the rest of the towns and villages on the road, it had suffered first from the exodus of the fugitives, who had pillaged on all sides; next from the Bashi-Bazouks and Circassians, who had plundered and murdered; and last from the Russian cavalry, who had pretty well eaten the place bare. Few inhabitants remained in the village. All was despoiled. Even the priest, who always had something if there was anything in the town, lived between bare walls, had no carpets, rugs, bedding, or provisions. But priests and Bulgarians were on the look out; and when the head of a long train of returning Turkish refugee families appeared in the main street of the village, there followed a scene which is painful in the last degree to describe. The Bulgarians gathered on the side of the street in knots of three or four, waited calmly until the miserable train had got well into the village, when, from every direction, they pounced upon the exhausted, defenceless Turks, and began to carry off their household effects, and even the cattle from the carts.

One poor woman, leading an ass piled up with bedding, and a child on the top, found her property distributed among half-a-dozen stalwart ruffians in a twinkling, and the little infant on the ground in the mud. The old men and women clung to their only treasures, while the Bulgarians dragged them away. Children yelled with fright, and panic reigned, which started the slowly-moving caravan into a quick march. All this went on before General Gourko was out of sight of the town. So much for Russian protection!

From Kuru Tchesme to Haskoi the corpses were more numerous, if anything, than on the route of the day before. The village was full of dead Turkish peasants; and on asking the Bulgarians who killed them, they replied, with a great deal of effusion and fiendish pride—"We did it. We and our friends did it."

In Haskoi there were bodies of Turkish soldiers in the streets nearly buried under heaps of stones and bricks, suggesting that, after being wounded and unable to move away, they had been stoned to death by the peasants; and here also were hundreds of Turkish families who, without arabas or beasts of burden, had taken shelter in the deserted houses.

Inquiring of one of these families where they had come from, they said that they had left Plevna five months ago, and since that time they had been on the road, and for the past few weeks in a great camp, further on towards Hermanli. For many days they had been entirely without bread or even Indian corn, and had existed solely on the flesh of the cattle that fell on the road. When some bread was given to them, they ate it like starved creatures, crying for joy. The grandmother, father, and mother with an infant at the breast, and a small boy of ten years, had not a single shoe between them, and their only baggage consisted of a

few old torn bed-quilts, and a kettle to boil meat in. They were in great distress of mind, because the house they occupied did not belong to them; and not having any means of transport, they were unable to proceed further until fine weather should begin.

At every step beyond Haskoi, General Gourko met new and more horrifying scenes on his triumphal march; man and wife lying, side by side, on the same blanket, with two children curled up on the snow near, all frozen dead; old men with their heads half cut off; and on each side of the road, broad continuous bivouacs deserted in haste, strewn with household effects. For many miles, carpets, bedding, and clothing had been trampled into the mud. The highway was literally paved with bundles, cushions, blankets, and every imaginable article of household use. Broken arabas, too, began to multiply; and near the little village of Tirali, on either side of the road, there was a perfect forest of wheels, reaching to the river on the right, and spreading away up the hill-sides on the left. Several dead Turkish soldiers, and one or two Russians, showed that there had been a little skirmish there; and the general and his staff rode into the midst of the great deserted bivouac, the horses walking on rich carpets and soft draperies, all crushed and trampled in the mud.

The scene was at once unique in its general aspect, terribly impressive, eloquent of suffering and disaster to innocent people. Hundreds of acres were covered with household goods. The bivouac reached all along the river bank, following the windings of the road, over the hill, and across the fields where the road made a sharp turn, for a distance of at least three miles, and of varying width. Over this great tract the arabas stood as closely as they could, with their oxen placed together.

The frames of the carts were, in most cases, broken to pieces. Sick cattle wandered listlessly about among the wheels. Corpses of men, women, and children lay about near every araba, and the whole ground was carpeted with clothing, kitchen utensils, books, and bedding.

It was a pitiable sight to see an old, grey-bearded Turk lying with his open Koran beside him, splashed with blood from ghastly gashes in his bared throat. Bundles of rags and clothes nearly all held dead babies. Crowds of Bulgarians swarmed in this great avenue of death and desolation, choosing the best of the carts, and carrying away great loads of copper vessels, which lay about in profusion, and mud-soiled bedding, with no more respect for the dead than for the rags they lay on. These scavengers would drive their carts across the heads of dead women and old men without even a glance of curiosity at the bodies!

At least 500 dead lay in the bivouac; no less than 15,000 carts had halted there, large as the number may seem; and at least 75,000 people had deserted the whole of their possessions, and had run away with only what they could carry in their hands. Even General Gourko and his staff were sickened by the continuation of the ghastly panorama for so many hours, and rode on to Hermanli, not leaving the last of the horribly mutilated corpses until they reached the very edge of the village.

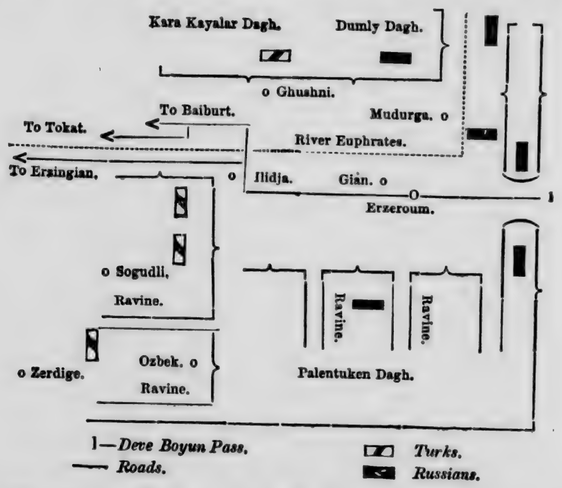
At Hermanli they learned, for the first time, the story of the bivouac. It seems that the advance of the cavalry had been checked, at different villages on the roads, by the very determined resistance of the armed population, who fought with fury. There were seven repetitions of the little scene which occurred near Philippopoli, where the inhabitants fled with the Turkish soldiers, and men and women fired volleys upon the Russians. The correspondent of the *Daily News* describes this little scene as follows:—"At Derbent, a short distance on the road between Philippopoli and Hermanli, when the Russian cavalry entered after a sharp little skirmish, they were fired upon, and several killed and wounded, from a little stone house. All efforts to parley with the Turks concealed there resulted in loss of life; and at last, after several peasants had been shot in the attempt to persuade the inmates to surrender, cannon were brought to bear upon the house, and shells exploded inside, which set it on fire. The defenders were driven out, and advanced upon the mass of soldiers, firing as they came. Of course, they were shot immediately."—From this description one would think that at least some considerable number of the inhabitants had thus been keeping the Russians at bay. But the correspondent goes on, in the most innocent way, to say—"There were only three peasants in all who made this desperate resistance in their fortress. This incident shows the spirit that animated the Turks to resist the advance of the Russians; and the history of

the great bivouac proves the extent and force of the panic which seized those who ran away." He then continues to describe the attack made on the bivouac:—"When the Russian cavalry came in sight of the bivouac there were one or two battalions of Turkish infantry stationed there as rear-guard, *but they dispersed and retired with little attempt at resistance*, and a squadron was sent into the great assembly of waggons to find out what it was. They rode on without receiving a single shot until they were right alongside, and within a very few paces of the train of arabas occupying the road, when, from behind these waggons, out from under the rude coverings, and from all sides, came a rattling volley, which emptied some saddles. Then it became evident that a ferocious resistance was to be made, so this squadron retired, and preparations were made to attack the collection of waggons, for it *sheltered not only the rear-guard*, but also no one knew how many armed peasants; but before the attack began in earnest the panic caught in the bivouac and spread like wildfire. The immense band of refugees ran away with the soldiers to the mountains, leaving cattle, carts, and all their movables which they could not seize upon at the moment." It need only be pointed out that, in one breath, it is stated that the rear-guard had retired from, and in the next that it had taken shelter in, the bivouac! He then continues:—"The cause of the panic was the appearance of Skobeloff's cavalry in the valley of the Maritza, in front of the bivouac. The result of it was doubtless the death of thousands upon thousands of Turkish peasants, who are now in the mountains without clothing or food. Still, another result of the flight is the enrichment of all the Bulgarians in the neighbourhood, for the smoke of the first firing had not cleared away when these ever-watchful individuals pounced down upon all the cattle the soldiers did not drive off, and carried away hundreds of carts laden with plunder."

This description is a model of disingenuousness and unscrupulous partisanship. There were over 500 dead lying in the deserted bivouac when the correspondent of the *Daily News* was there; yet he states that only a "few saddles of the Russian squadron were emptied, and that before the attack began in earnest, the panic caught like wildfire, and the refugees ran away into the mountains with the soldiers." How, then, does he account for the 500 dead bodies? Comment is rendered superfluous by the report of the official commission in August, 1878, which entirely bears out the view we have taken of the affair. In short, of the 75,000 people, only a few thousands with their arabas were turned back towards their homes by the Russians. The rest escaped from the horrors of the road between Philippopoli and Hermanli, which should bear for all time the name of the Road of the Dead.

CHAPTER XXX.

THE ADVANCE ON ERZEROUM.



AFTER the battle of Aladja Dagh, as already recounted, Mukhtar Pasha ordered Ismail Pasha to fall back from his positions at Igdir and Bayazet, and join him at Hassan Kaleh, in order to assist in the defence of the Deve Boyun Pass, leading to Erzeroum.

Ismail at once complied with this order, and set off with his Kurds, followed step by step by General Tergukassoff, whilst Mukhtar Pasha himself, with the remnant of his troops, was pursued by General Heimann, who effected his junction with Tergukassoff at Köprikoi, five-and-twenty miles east of Erzeroum.

The Russians lost no time in following up the track of the Turks, and found them intrenched in very strong positions on the Deve Boyun heights, guarding the pass to Erzeroum from the east. But, strong as were the positions, the Turks were not in a state to defend them. Mukhtar Pasha's and Ismail Pasha's men were thoroughly demoralised by their precipitate flight and the disaster at Aladja Dagh, whilst the

fresh troops from Erzeroum were more or less panic-stricken by the exaggerated accounts of the hopeless condition of things. And scarcely had they heard of the full extent of the catastrophe when they found the Russians already upon them at their very gates. All this, apart from the fact that men never fight so well in the open when they know they have stone walls and their houses behind them, contributed to make the defence of the Deve Boyun a forlorn hope. Not that the men did not fight well and hold their ground bravely enough when face to face with the enemy; but as soon as they saw that they were being outgeneraled, as usual, and their flanks turned, as usual, they lost heart; and after an obstinate combat, as long as it lasted, closed by the heights of the Deve Boyun, which curve round in the south into the Palentuken Dagh, a range of mountains much cut up into ravines and defiles, running south and west. North of the valley are the Kara Kayalar Dagh and the Dumly Dagh; and in the west are the heights of Sögüdli, separated from the crest of the Palentuken Dagh by two deep ravines south of Sögüdli and Ozbek respectively; whilst on the north-east lies, in a commanding position, the village of Ilidja, on the high-road from Erzeroum to Trebizonde, Tokat, and Erzingian, and opposite to it, on the slopes of the Kara Kayalar, the village of Ghushni, in a similar position.

Now the Russians were in this difficulty:—They had not sufficient men to surround

Mukhtar Pasha was obliged to give up the pass and fly to the town behind him, leaving nothing on the east between him and the victorious Russians but the crumbling walls of Erzeroum and the forts on the Top Dagh, between the town and the Deve Boyun Pass.

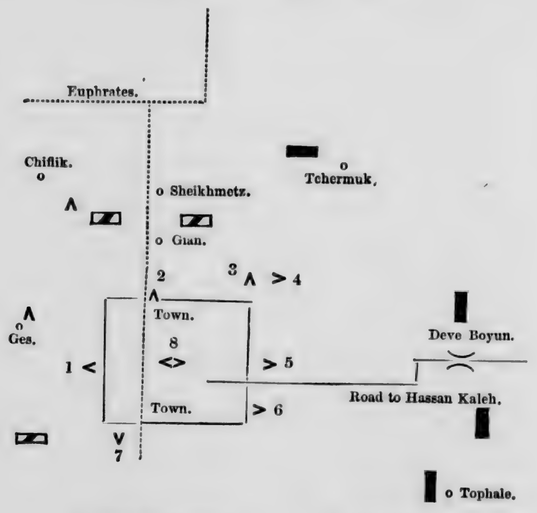
This took place on November 4th, and Erzeroum literally lay at the feet of the Russians. But between that and entering it was a long step, and this step was not so easy to take, for many reasons.

The above sketch gives a graphic picture of the town and its surroundings. Erzeroum, it will there be seen, lies somewhat south of the river Euphrates, in a swampy valley, through which only a few good roads run. In the east this valley is Erzeroum, nor even to attack it simultaneously north, east, and south. They might, indeed, have succeeded in carrying it by assault from one point, but it would have been at a great loss, and the instructions both commanders had were not to risk any great loss if avoidable. But, apart from this, and supposing they had succeeded in capturing the town, they had not sufficient men to hold it and carry on active operations in the field at the same time against the army, which would have left the town by the western gates as soon as they entered it by the eastern gates, and, in truth, have beset them themselves in Erzeroum—thus besieging the victorious enemy, in turn, in the very scene of his success. Kars, it must be remembered, had not yet fallen, so there

was no knowing when the reinforcements could arrive which were held in check by this Asiatic Plevna in miniature.

If, however, it had been possible to carry the town by a *coup de main* with a small force, and oblige Mukhtar Pasha to abandon it with his army, the Russians would have been able to move the whole of their forces westwards, and camp at the key of the western approach to Erzeroum, at Ilidja, or even follow up Mukhtar to Erzingian or Baiburt, or to whatever other point he might fall back upon. In short, the only feasible project, under the circumstances, was for the Russians to frighten the Turks out of the town by a surprise, and follow them up whilst the panic lasted. This was, in fact, the plan they adopted, in spite of the reports and rumours industriously set afloat, both in Europe and in Asia, to the effect that Mukhtar Pasha intended to convert Erzeroum into a second Plevna.

But to have done this, other than disorganised troops were requisite; and the simple matter of fact is, that the defeat of the Turks in the action on the Deve Boyun on the 4th November, resulting in the loss of thirty-six cannon, was scarcely less disastrous than the defeat before Kars. A complete panic, with the consequent losses, took place, and was not allayed till the fortifications round Erzeroum inspired the fugitives with a certain sense of safety. Everything was in the most fearful confusion. The only person who kept his senses at all about him was Sir Arnold Kemball. Regarding Sir Arnold Kemball, by the way, a story obtained currency, which, true or not true, was believed in by the Russians at the time. It is said that Sir Arnold, seeing the disastrous result of the engagement, rode off in all haste to Baiburt, to inform the commander of the troops hurrying up from Trebizonde of what had occurred, and to prevent him from coming up to Erzeroum, thus enabling him to secure Mukhtar Pasha's line of retreat should it be necessary for him to abandon Erzeroum.



Thus, after the action on the Deve Boyun, Erzeroum was held by one portion of Mukhtar Pasha's and Ismail Hakki's forces; the rest were at Ilidja and Ghushni; whilst the reinforcements, such as they were, from Trebizonde, had been placed in positions which would enable them, in conjunction with Mukhtar Pasha's army, to bar the enemy's advance further west, and prevent him from descending into the plains west and north of Erzeroum—that is to say, until he had seized the heights of the Palentuken Dagh and the adjoining hill up to Ilidja, and had also occupied the slopes of Dumly Dagh and Kara Kayalar Dagh as far as Ghushni. The possession of these two points, completely commanding the road from Erzeroum, was absolutely necessary before the Russians could have ventured upon any advance.

Defence and attack were thus clearly prescribed by the natural features of the field. In no case, perhaps, could they have been more stringently laid down. A wide, straggling town, commanded east and south by high hills, protected in the west and north by a belt of swampy ground, stretching for about eight miles in either direction, Erzeroum would have required for its investment a far larger body of troops than the Russians disposed of. A line of investment, to be effectual, would have to stretch over more than forty miles. Hence, as an attack from the west, where the town was quite open, with the exception of one redoubt, would have been impossible as long as there were sufficient troops in the rear at Ilidja or Baiburt, it could only be taken from the east, south, or north; and it was just in these directions that the defences—redoubts and bastions—had been erected, as will be seen from the following sketch. In the north, barring the roads from Gian, Sheikhmetz, and Suk-Tchermuk, there were three works—Kavak Tabia, Nishan Tabia, and Medjidieh Tabia. In the east, on either side of the road which comes winding down from the Deve Boyun, and commanding it for a considerable distance, were the Azizieh and Ahali Tabias. These were flanked in the south by some other works—all open—which are not shown in the sketch—situated on the terraces of the Palentuken Dagh. In the south-west, where the stream which traverses Erzeroum enters the town, there was the Keremen Tabia; and in the west, commanding the road from Trebizonde and Erzingian, the Djahabane Tabia. Nearly in the centre of the town stood the citadel, the whole surrounded by an old wall, dating from the Genoese occupation, where it had not been patched up by the Turks.

The course of the combat on the 9th to the 10th of November can be clearly followed when bearing this situation in mind. An attack from the north was not advisable, as General Komaroff, demonstrating through the Tortoum valley, had other objects to attend to, and would thus

have necessitated a change of front on the part of Generals Heimann and Tergukassoff, which could not be thought of. The attack, therefore, had to be conducted on the east and south against the Azizieh and Ahali redoubts. A detachment was sent by General Heimann to advance against the Azizieh redoubt, and another by General Tergukassoff against the Ahali position. But owing either to one of the columns losing its way, as the Russians say, or to the determined defence of the Turks, the attack was unsuccessful. The course of the action was really very simple. The eastern column failure of the southern column to carry out its share of the operations. Possibly it lost its way; but it is much more likely that, flushed with their success on the Deve Boyun, the Russians imagined that the Turks were so demoralised that a handful of troops would suffice to carry the town, force Mukhtar Pasha to retreat, and enable them to drive him before them and clear the whole plain of his forces. But they were mistaken. Mukhtar Pasha knew perfectly well that the Russians had not the men to invest the town completely, or cut off his retreat to Ilidja, and that for some

Plan of Erzeroum and Forts.

successfully attacked the Azizieh redoubt, occupied it, and made a number of prisoners; but the southern column—which, if any column lost its way, must have been that one—failed to carry the Ahali position which, flanking the Azizieh, rendered it untenable for the Russians, who, therefore, withdrew at dawn in the presence of the reinforcements which had been hurried up, and which followed the retreating Russians till they were thrown back on their main forces on the Deve Boyun. In so far, therefore, the Turks could justly claim a victory. The repulse was, no doubt, due to the time to come his line of march westward would be secure. He therefore naturally determined to throw as many impediments in the way of the Russians as he could without compromising himself. At any time, supposing the Russians attacked in force from the east, south, or immediately north of Erzeroum, he could fall back on the positions he had prepared in the west. By this means he gained time for "something to turn up."

Meantime the alarm in Erzeroum itself was great. Cavalry soldiers, going wildly about, informed the public that the Russians

had taken the Azizieh Fort. At two o'clock in the morning the enemy had stormed the advanced work on the southern extremity of the Top Dagh. It seems they surprised the garrison, and even entered into the great stone barracks amid the work; for, afterwards, the Turks saw the broad scaling-ladder they had left in the fosse. They had surprised the sleeping sentinels and got into the place before any one was rightly aware of what was going on; and it was even said that the assailing force, some two companies of grenadiers, wore fezes in order to deceive the defenders. Anyhow, the Azizieh Fort was taken; and it was only towards daybreak that Mehemed Pasha, the same officer who carried the Kizil Tepe, succeeded in retaking it. Had it been known what was really going on at the time, a most disastrous panic would probably have ensued.

As it was, the troops, armed citizens included, remained steady at their posts. Shortly after daybreak, the din of combat got further and further off, for the Turks had already assumed the aggressive, and were fighting down at the western end of the Deve Boyun Pass. A long line of cavalry, supported by heavy reserves, was halted across the valley mouth, whilst a heavy infantry engagement went on away up the pass, where the Turkish troops were pursuing the Russians, who had failed to hold their own in the Azizieh Fort, until a body of Russian troops pushed along the mountain slopes which gird the plain south of Erzeroum, to sweep the Turkish line of retreat. Then the Ottomans began to retire precipitately, fearing lest this demonstration might develop into a real attack, and, in case of success, cut off their retreat. Before this sudden retreat there was considerable disorder. The armed townspeople, who had made a sally, had allowed themselves to be drawn too far, and when the enemy reassumed the offensive, withdrew with a certain amount of haste; but, for the moment, the danger was over. The conflict had, however, been very severe, and Russian and Turkish dead covered the ground within and without the ramparts of Azizieh; the former, as usual under such circumstances, entirely stripped of their clothing. Some of the townspeople, in a spirit of uncompromising hatred, were maltreating their dead enemies—one man jumping with both heels on the still fresh body of a Russian, a gurgling cry escaping from his mouth with each concussion. The bodies were buried as quickly as possible, by order of Mukhtar Pasha. The Turkish loss was nearly 700 *hors de combat*, and that of the Russians about 900. On November 12th, at dusk, the Russians made another attempt on the Medjidieh and Azizieh forts, but, for the second time, without success, and without inflicting much damage or loss of life on the defenders and population of the town. In spite of the din and roar outside the places and along the ramparts, the streets were quiet enough. The Armenian population, like so many rabbits in a burrow, sought the furthermost shelter of their rickety houses; whilst the Moslems, the privileged warriors, were all at the ramparts. Nasty troops of wolf-like dogs, who belong to nobody, cowered on the rubbish-heaps at the corners, and showed their glimmering teeth at the few passers-by, called outside by the circumstances, or at the half-drowned soldiers, heavily laden with clot-like bread packed in their sodden blankets. Poor fellows! they took it all calmly enough. There was Allah, and the Padishah, and Mukhtar Pasha, who bade them go; and used as they were to obey every nod of a nameless pasha, far off in a province it would take a gazetteer to find out, how could they dream that victory was not chained to their standards? And yet the battle of Aladja and the capture of Deve Boyun were not so remote. One of the best characteristics of British troops is that they don't know when they are beaten. Turkish soldiers possess this quality to a rare extreme, and thus they were ready to defend Erzeroum in spite of all.

Towards midnight the attack was repulsed along the whole line, and all was silent till the dawn should bring in its usual accompaniment of shells and rockets. These latter projectiles made more noise than they could do harm in an earth-roofed, stone-built town like Erzeroum. There was a great deal of whizzing, followed by a blazing glare of red light, and a thundering detonation. At first these missiles frightened the Turkish soldiery immensely; but they were not long getting used to them, and considered them no worse than shells. It was curious to go out into the streets after the attack. Every one was still at his post. The liquid mud which, on the occasion of a rainfall, takes the place of water in Erzeroum, duly fumbled its heavy way down the ill-paved precipitous streets; the uneasy dogs still felt inclined to snap at the untur-

baned stranger; and from away out in the plain came the pattering fire of the obstinate Muscovites, unwilling to abandon their attack even though repulsed.

Thus far, the fighting of the population of Erzeroum was immensely superior to that of Kars. Old Moslems, with long white beards, and brass-ringed octagonal-stocked muskets of another age, stood, hour after hour, in the advanced forts, awaiting the attack with a bravery that might have been an example to younger men. A little way further on, one saw men bearing something muffled in a dusky blanket. It was a wounded man. Then came many more such. Smothered fires gleamed along the rear of the ramparts. They were lit to enable men perishing in the bitter cold night to stand the biting temperature. Ever and anon a bugle was sounded, followed by many another The *sonnerie* was "Long life to the Padishah!" and wild cries, far from cheerful, replied to the call.

But all the devotion and endurance of the Turkish troops in Erzeroum could not check the course of events outside, and on November 20th Mukhtar Pasha was informed of the fall of Kars, and summoned, for the second time, to surrender. He refused; and by November 23rd, already a large body of troops was added to General Heimann's forces, and henceforth the hopes of the defenders of Erzeroum were centred, not without some reason, on "General Winter;" and, it may be added, on a still more powerful ally who speedily put in an appearance—"General Disease." These two grim officers exacted more victims in Asia than in Europe, and caused Russia the loss of some of her best officers.

CHAPTER XXXI.

THE END OF THE CAMPAIGN IN ARMENIA.

In the beginning of December, a caravan of camels from Persia was passed through the Russian lines round Erzeroum. When it came to the Russian camp, the head man was asked what his goods consisted of, and he replied, carpets, and that they were consigned to an agent in Erzeroum, to be forwarded to England. The Russians took three or four carpets, and gave the man a note to the agent, saying they hoped he would not charge too much, and that they would pay him in a few days when they came to Erzeroum. Those few days, however, were spun out to eighty, for it was not until February 22nd that the Russians entered Erzeroum; and then only in consequence of the signature of the armistice.

It is true that the tenacity of the Turks in holding their positions in Asia Minor, had only an indirect influence on the course of events, and that when the European armies collapsed, the fate of Erzeroum was interesting chiefly to the inhabitants only. Indeed, the wisdom of the Turkish commanders in attempting to defend Asia Minor with a field army at all, may be doubted, and the question be asked, whether it would not have been better for the Porte to have concentrated all its forces in European Turkey. There would also have been political wisdom in this step; for the Porte might have felt assured, that however indifferent to the fate of Danubian Turkey, the British government could by no means afford to ignore the fate of Asia Minor; and that, come what might, England would, in all circumstances, take care that the Russians should not acquire a preponderating influence south of the Black Sea.

However, all these considerations do not alter the fact that, until December 27th, when he went to Constantinople, Mukhtar Pasha held his ground against the Russians in Erzeroum, whilst stout old Dervish Pasha did the same in Batoum.

Though within cannon-shot of the town since the battle of Deve Boyun, the Russians, with the exception of the two attempts to storm Erzeroum, remained almost entirely inactive, at least as far as hostilities were concerned. Still they had been steadily pushing their way down the Olti valley, and behind the Palentuken mountain south-east of the town, both columns gradually converging to a point of union in the neighbourhood of Ilidja. Both forces were thus

in alarming proximity to the Trebizonde road, and it was only a matter of a few days at the furthest for the town of Erzeroum to be completely blockaded. For some days past the Turks had been accustomed to see, from the ramparts of the town, the Cossacks leisurely marching from one village to another, requisitioning corn and forage, only three-quarters of an hour's march from the Olti gate of Erzeroum. The guns on the Kop Dagh opened fire, and succeeded in forcing the Cossacks to retire after they had asked about forage, and whether any Turkish troops were concealed in the village.

The Russians, however, were rapidly closing round Erzeroum; and on January 1st, when Edhem Pasha, who occupied Ilidja to watch the fords and bridges of the Euphrates, started on a patrolling expedition towards Pernacaban, the Cossacks who occupied the village of Usni, an hour and a-half's march distant, took advantage of the circumstance to try and surprise Ilidja. At half-past four o'clock they were already, to the number of some eight or nine hundred, so close to it, that the advanced guard could be counted without the aid of a glass. At this juncture the Turkish cavalry, warned of the danger, hurriedly returned to Ilidja, but only just in time to prevent its capture. The Russians advanced up to the banks of the river; but, finding they could not arrive at the village before the Turks, they drew off to their camp at Usni. The situation had become critical in the extreme, for to maintain their communications with Trebizonde open, the Turks required a much larger force at Ilidja than they possessed. The Kara Su, half-way between Ilidja and Erzeroum, expands into an elongated sheet of water, known as the Ilidja Su. It is here crossed by two bridges, its depth rendering it unfordable. While these bridges were held, a formidable obstacle intervened, during the summer and autumn, between the Russians and the Trebizonde road, which runs more or less parallel to the stream; and some flying columns of cavalry amply sufficed to prevent parties of the enemy from molesting the traffic. In winter, however, matters became greatly changed. The intense cold froze the river to a depth of eighteen inches; and cavalry and ox-waggons could pass across it. It practically ceased to be an obstacle; and the Russians did not neglect to take advantage of the circumstance to possess themselves of the road on its southern bank leading to Trebizonde, and on January 4th, at about ten o'clock in the forenoon, six battalions of Russian infantry, preceded by two regiments of cavalry, boldly crossed the Kara Su, and took possession of Ilidja. Their first act was to cut the telegraph wires, and to throw out vedettes in the direction of Baiburt; whilst Edhem Pasha, supposing that he saw only the advanced guard of a whole army corps, immediately fell back hurriedly upon Aschkalé.

A correspondent of the *Daily News* was quietly reclining on the floor of his *oda* at Aschkalé, the best in the miserable village, that of the local magnate or Bey, when Edhem Pasha, looking like King Christmas white from head to foot with hoar frost, rushed in, and divesting himself of his numerous fur coats, and head and face wrappers, threw himself on a mattress at the fire opposite that occupied by the correspondent. He seemed greatly perturbed in spirit. He gave several orders in rapid succession about outposts and vedettes, and then his servant produced a large wicker-covered gallon bottle of rhaki.

He turned abruptly to the correspondent, and asked what his countrymen were about. England seemed going to sleep, he said. "There is Erzeroum completely blocked; its last avenue of communication with the outer world cut off; all the same as lost." And he continued pouring out his dissatisfaction in the same strain for about an hour.

The "Special" felt glad that he had taken the rather emphatic hint of the Cossacks on the previous evening, and left Ilidja there and then. Edhem Pasha seemed divided in opinion as to whether he should retreat on Erzingian, or merely push forward to Pernacaban. "You'll have the Russian cavalry here to-morrow," he said, "and there is no knowing how we may be cut off."

He asked if General Kemball was still at Pernacaban, and on being answered in the affirmative, proposed going to him the next day.

The evening wore on with such talk, and orderlies and officers coming and going continually on one business or another, when, at about half-past nine in the evening, an orderly arrived with a despatch, to the effect that, the same afternoon, Mehemed Pasha had made a sortie from Erzeroum in connection with a flank movement led by

Ismail Pasha, and that the Russians, after a brief cannonade, had evacuated the village, and retired across the river again. The pasha thereupon somewhat regained his composure, and immediately issued orders for the entire force to be ready to march back to Ilidja within an hour.

Then followed a scene of confusion such as has been rarely witnessed. Bugles sounded and re-sounded in vain. There was no response save on the part of the local guard and a couple of dozen Karakalpaks, or irregular horsemen. The pasha stormed and raved, despatched his second in command and his aides-de-camp hither and thither, but all in vain.

"Where are the officers? where are the men?"

"In the different villages," was the reply.

In fact, the thing was only reasonable, inasmuch as no orders had been given on the subject. Aschkalé was a miserable tumble-down hamlet of a few dozen cabins crowded by an excessive population. It was impossible to find quarters for 1,600 men and horses there; and the subordinate officers had given *carte blanche* to their men to find lodgings where and when they could.

The night was bitterly cold, and a kind of smothering smoke like frozen mist filled the air, rendering a man invisible at fifty yards. Just the sort of weather for a surprise, had the Russians been in a position to effect one. The soldiers accordingly went off in scattered parties to different villages, some two, three, and four, and even ten miles distant. This may seem incredible; but it is positively true. Some came as far as Pernacaban, three hours' ride from Aschkalé. Orderlies were at once sent off to the surrounding villages to order the men in; but notwithstanding every effort, not more than five or six hundred could be got together by midnight. There were fragmentary squadrons without officers, and officers without men. Possibly this scattering of the troops was the only available means of finding the cover so imperatively necessary, for it was almost certain death to attempt bivouacking on such a night; but with the enemy in such supposed dangerous proximity, it was courting certain destruction.

The pasha, having seen this fraction of his command on their way back to Ilidja, went to bed; but started himself long before daylight in the same direction. He did not, however, remain long in Ilidja. On January 8th, he suddenly put in an appearance at Pernacaban, on the road to Baiburt, announcing that the Russians had occupied Aschkalé with a considerable force, he himself narrowly escaping being made prisoner.

He owed his escape to the timely warning of his host, who informed him that the Russian cavalry was advancing its flanks to surround the village. The bulk of the Zaptieh cavalry and Karakalpaks were stationed at Karabuyouk Khan, two hours and a-half distant along the Erzeroum road. The Cossacks, moving stealthily along the opposite bank of the frozen Kara Su, under cover of the dense snow-fog, and crossing on the ice, succeeded in surprising the Turks, some 600 strong. There was no fighting. The Ottomans fled in disorder. Those who were well mounted fled across the plain, scattering in every direction; and those whose horses failed them were either cut down or made prisoners. The Russians then immediately advanced, occupying Aschkalé, and pushing a force towards Pernacaban, three hours' march further on.

With this evacuation of Ilidja by the Turks, the investment all round Erzeroum, by the Russians, could no longer be prevented; and henceforth, neither army nor garrison did anything but keep in its positions until the town was entered, in accordance with the terms of the armistice, which was signed on January 31st. Batoum, however, still held out, and resisted, successfully, a determined attack by the Russians on January 30th, the day before the armistice was signed.

CHAPTER XXXII.

THE ARMISTICE.

WITH Adrianople in the hands of the Russians, and their armies converging in every direction upon Constantinople, it became clear to the Turks that the supreme moment had at last arrived; and that whatever diversity of opinion might prevail as to the course of action to be ultimately adopted, it was absolutely necessary to stay the advance of the Russians. As this could not be done by force, there was nothing left but to submit to the Russian conditions for an armistice, which armistice, however, was to depend upon the agreement as to the bases of a definite peace. True, at one moment it seemed as though there was another way out of the difficulty. That was when the British fleet, under Admiral Hornby, suddenly arrived from Besika Bay at the mouth of the Dardanelles on January 25th.

Crowds lined the shores on both sides of the Hellespont. The enthusiasm amongst the Turks was at its height. "At last," they said, "the English are convinced the Russians are not fighting for the Bulgarian Christians, and are coming to help us." But when the flag-ship of Vice-Admiral Hornby, the *Sultan*, was abreast the Castles of the Dardanelles, a boat put off from the shore. Presently the fleet came to a standstill in mid-channel, the ships blowing off steam. H.M.S. *Sultan* saluted the Turkish flag, and the salute was immediately returned by Fort Sultanieh; then, right-about-face, the whole of the vessels steamed outside the Straits again, whence they had so recently come. This was in consequence of a telegram from Mr. Layard, to the effect that the Porte refused, in virtue of the treaties, to allow the fleet to pass the Straits. It had been presumed that, as the Porte had given the requisite permission to pass the Dardanelles on a previous occasion, this would remain valid, or that no difficulty would be found in obtaining fresh permission, and Mr. Layard was requested by Lord Derby to obtain the necessary document. The Porte refused, alleging that the circumstances had changed. The preliminary conditions of peace and the armistice had been agreed to, though not yet signed; and the advance of the fleet would be construed as hostile to Russia. The allegation as to the protection of the lives and property of British subjects was admitted on all hands to be insufficient, the condition of the capital having improved, and the danger of disturbances having become immensely less since the armistice and the presence of the Russian army in virtual possession of the lines of Constantinople. The Turks, moreover, pointed out, that if the fleet entered with permission, the Russians would probably occupy the city; and it was even asserted that the Grand Duke Nicholas had telegraphed to this effect on hearing of the proposal. Whether true, or not, that the grand duke uttered this threat—probably not, as otherwise Lord Derby would certainly have made mention of it in one of his tattling moments—it is certain that the Russians took credit to themselves for this sudden flight of the British fleet; and, on the following day, a placard was posted up on the gates of the British embassy, and at other places, on which were printed the words, in large type—"Lost, between Besika Bay and Constantinople, an ironclad fleet. Any one giving information will be handsomely rewarded."

But, though the fleet failed to accomplish its ostensible object, the real object of its despatch to the Dardanelles had been attained. This was, to hurry on the negotiations, and relieve the minds of ministers and the public as to their nature.

On January 27th the Grand Duke Nicholas arrived at Adrianople, accompanied by the Turkish ambassadors, who had been sent to arrange the terms of the armistice and the bases of the future peace. Little progress was made at first, however, for two reasons, both of the same kind. The Russians wanted to gain time for their armies to reach the points they had determined to reach in order to consolidate their position; whilst the Turks also desired ardently to gain time in hopes of "something turning up" in their favour. To attain this object they both adopted the simple plan of referring to head-quarters—that is to say, to St.

Petersburg and Constantinople. Hence endless delays, real confusion amongst the Turks, and a well-calculated confusion amongst the Russians in the matter of orders sent, or not sent—as best suited the purpose—to the commanders of the different army corps and detachments.

At the same time, both the grand duke and M. Nelidoff professed to have no power to discuss conditions. They simply offered their terms, and gave the Turks the alternative of acceptance or refusal. After two days' negotiations the Turks decided to refuse, although the grand duke and M. Nelidoff used every argument to persuade them to accept, informing them that the march of the armies would be stopped the moment they consented, and that their refusal was the destruction of the Turkish empire, which Russia had no wish to bring about.

They were informed that Adrianople and Philippopoli were taken, the army of Suleiman completely destroyed, and that the Russians would continue to march upon Constantinople unless they accepted.

Namyk Pasha exclaimed, "Well, then, if the Ottoman empire must perish, let it perish by force. We will never sign our own death-warrant."

He was, however, induced to reconsider this decision, and he and Server Pasha asked two hours for reflection. At the end of this time they answered that they could not accept.

Both the Russians and the Turks declined to tell any one the conditions, but Sir A. Layard was able to obtain them indirectly, and to communicate their general drift to his government at home. The Turks objected, more or less, to all the conditions; but the one which prevented the agreement was the Bulgarian autonomy. They were ready to yield every other point but this, which they considered equivalent to the destruction of the Turkish power in Europe. They were willing to grant autonomy, as provided for in the programme of the conference. The Russians replied to this, that the programme of the conference was the minimum reduced to the most slender proportions in order to avoid war. As this object was not obtained, they must now demand a far more efficient kind of autonomy, something like that of Servia and Roumania, with Bulgaria extending very near Constantinople on one side, and to Salonica on the other. This was, of course, equivalent to the extinction of Turkish power everywhere in Europe, except merely Constantinople. This they would not accept. They were willing to cede Kars and Erzeroum, willing to grant the complete independence of Roumania and Servia, the free passage of the Straits to the Russian fleet, and a war indemnity, but not the autonomy of Bulgaria.

It was just on this point, however, that the Russians were the most rigid. They left all the other questions for ulterior discussion, apparently recognising the fact that all those questions concerned Europe, and not Russia and Turkey alone. On the one question of Bulgarian autonomy only were they inflexible. There was no question of the cession of the Turkish fleet; though, of course, that might arise in ulterior discussions on the question of a war indemnity. The whole course of the negotiations showed that Russia wished to conclude a direct and separate peace with Turkey, however much the conditions of that peace might be afterwards discussed and modified by Europe. These conditions were, a cession of territory in Asia, the question of the Straits, and a war indemnity. Although she meant to force the Turks to consent to these things in principle, she expected Europe to sanction their confirmation and application. In this way Russian diplomacy offered no hold to the English government to seize as a pretext for war; for England could not declare war to prevent Bulgarian autonomy, the only question on which the Russians professed to be inflexible.

At last, however, the Turks yielded, and on January 31st the armistice was signed at Adrianople, and Count Keller was sent by General Skobeloff from Tchataldja to Mukhtar Pasha at Kadikoi, to arrange the lines of demarcation and the neutral ground between the two armies during the armistice. General Skobeloff's head-quarters were to remain at Tchataldja until the signature of peace. His cavalry arrived there on February 6th, and he himself, with the head of his infantry column, on the following day. General Gourko's advance guard arrived in Silivri, on the coast of the Sea of Marmora, on February 7th also.

There was some difficulty in getting the Turks to evacuate the ground stipulated in the protocol, though it was agreed that they should evacuate all their positions by February 6th. It was to see if they meant to do so or not, as well as to arrange the lines of demarcation, that Count Keller went to

Kadikoi; in fact, Mukhtar Pasha had not, until a late hour at night, received any information about the terms of the armistice from Constantinople, and thought the two armies were simply to remain where they were at the moment the armistice was signed, and he was surprised to find the Russian troops continually advancing.

Thus when General Strukoff, of Skobeloff's cavalry, arrived on February 5th at Silivri, he found the Turks still there; and they at first refused to leave the place, as they had had no orders to that effect. It was not till he brought up a battery, and threatened to fire on them, that they finally consented to leave. It was stipulated in the protocol that the Russian lines should be from Buyuk Tchekmedje, on the Sea of Marmora, along the right bank of the Kara Su river to the Lake of Derkos, on the Black Sea; and the Turkish line from Kujuk Tchekmedje, on the Sea of Marmora, to the village of Ak Bunar, on the Black Sea, leaving a space of about seven miles between the lines as neutral ground. The village of Derkos was on neutral ground, as was also the whole Turkish line of defence, and the fortifications of Buyuk Tchekmedje. The Turks really abandoned their last line of defence, and left Constantinople at the mercy of the Russians, with the line of Kujuk Tchekmedje, not fortified, nor were they allowed to work on them by the terms of the armistice.

In consenting to this arrangement, Server and Namyk Pashas must either have been completely panic-stricken, thinking that the only way to keep the Russians from Constantinople was thus to throw themselves on the generosity of the grand duke, or else, having abandoned all hope, they wished to give the Russians a proof of their sincerity in thus needlessly abandoning their last line of defence. The fact is, the Russians could not have attacked these lines for fully two weeks, as they would not have had up enough infantry to do so, for the positions were amongst the most formidable in the world.

The valley of Kara Su, far above Tchataldja, is nothing but a marsh, crossed by one or two causeways, over which no troops could have passed for fully two months; and it was further shortened by the Lake of Derkos. The possible line of attack was not over seven or eight miles long, not more than a third of the length of Osman's lines at Plevna, and Mukhtar had 30,000 or 40,000 men, good, bad, and indifferent, with whom he might have held this line at any hazard, and the Russians could not have insisted on its evacuation, for the reason that they could not be ready to attack for two weeks. In their possession this line would have put the Turks on a much better footing for the peace negotiations. However, they abandoned all idea of holding it, and Mukhtar received orders to give it up. He only asked for a delay of three days to remove his heavy artillery and stores, and promised to evacuate the line by February 10th. General Skobeloff informally granted that delay, while reserving to himself the right to watch the proceedings step by step, and see that they were really carried out. He informed Mukhtar that unless he saw that the evacuation was taking place, he should consider himself authorised, by this continued violation of the armistice, to occupy the neutral ground, and seize whatever war material, cannon, &c., he might find there. As Skobeloff had not yet enough troops up to attack these formidable positions, this threat was what the Americans call a game of bluff. The grand duke, however, considered it of the greatest importance to have these positions evacuated at once, and Skobeloff tried to get it done by means of threats and bluster in lieu of force, which he had not yet got at his disposal.

The reason for this anxiety to obtain possession of the coveted lines was evident. Peace was not certain until it was signed. Meantime the Russians had the possibility of English interference continually before their eyes—an event which a discussion of the conditions of peace might still bring about. But, with the lines of Buyuk Tchekmedje in their possession, as they virtually would be when the Turks evacuated them, Constantinople was practically as much in their hands as if there were sentinels at the doors of St. Sophia.

Meantime, however, both Turks and Russians tried hard to deceive each other. The Turks assured the Russians that they had 85,000 men behind their lines. The Russians assured the Turks that they had 100,000 ready to attack upon a moment's notice, and were only restrained from doing so by consideration for them.

On February 10th, however, true to his promise, Mukhtar Pasha completed the evacuation of the neutral territory. All his army retired behind the lines of Buyuk Tchekmedje; but the heavy artillery still

remained in position, and a good deal of war material was still on neutral ground, because the Turks could not remove it. Skobeloff told Mukhtar to at least remove the guns from their platforms. Constantinople was thus virtually in the hands of the Russians, just as much as if they were already in the place. They had the sense not to enter, that was all. Skobeloff, while going over the lines of delimitation, was near enough to see the place. He and the whole of his staff, with the escort, sat on their horses and gazed on the capital for some minutes. There was some disappointment expressed that they should not have been allowed to march in; but all were in general very glad the war was over.

There was still, however, considerable alarm lest a conflict should arise between England and Russia; for, with the occupation of the Tchataldja lines, Russia had played the first of her trump cards. Constantinople was threatened. With this threat the necessity for action to protect British interests had arisen; and, in spite of dissensions at home, and in spite of the protests of the Porte, the British fleet was ordered to pass the Dardanelles, and take up any position, within easy distance of Constantinople, that might appear suitable to the admiral. If necessary, Admiral Hornby was to force an entrance. The Porte, however, contented itself with a protest, and Admiral Hornby arrived with his fleet in the Sea of Marmora on February 14th, and anchored off Princes' Islands.

The movement was dictated, not so much by the presence of the Russians so close to Constantinople, as by the knowledge, which had been allowed to leak out, of the conditions of peace which the Russians laid down. These were such that, if insisted on, war between England and Russia was inevitable. It was therefore absolutely necessary that a force should be on the spot ready to keep the Straits open in case of necessity.

Meantime, pending the signature of peace, both Russians and Turks lost no opportunity of strengthening their positions, in view of a possible resumption of hostilities. Rustzuk was given up to General Todleben on February 21st; the Turks were retreating to Schumla and Varna, in compliance with the terms of the armistice; whilst, on the other hand, the lines of Bulair stretching across the isthmus of Gallipoli, and Gallipoli itself, were strongly garrisoned by the Turks, and Mukhtar Pasha and Mehemed Ali were indefatigable in strengthening the lines before Constantinople, from the Black Sea down to the extreme limit of the neutral zone by San Stefano. The Russians, on their side, held the whole country west of Constantinople, along a line drawn from Derkos on the Black Sea to Buyuk Tchekmedje on the Sea of Marmora, as well as the northern coast of the Sea of Marmora, whence a neutral zone, two miles either side of Examile, was drawn to the Gulf of Enos, north of the isthmus of Gallipoli, and separated the Russian lines from the lines of Bulair, which stretched across the isthmus from sea to sea.

Already, by the middle of February, the Turks, if it had been necessary, could have made a stronger resistance on the Gallipoli fortifications than was generally supposed, Though Constantinople was virtually in the hands of the Russians, Gallipoli was far from being similarly situated without a severe struggle. Twenty-two thousand Turkish troops were in the lines of the fortifications, with fifty Krupp cannons of large calibre on the modern system, and thirty-six on the old system. Ammunition trains were constantly leaving for the lines, notwithstanding the probability of the preliminaries of peace being speedily signed; whilst three ironclads of the British fleet, with Vice-Admiral Commerell on board, were watching the Straits. The *Flamingo* was at Rodosto, and three other vessels of the fleet in the Gulf of Ismid, with Admiral Hornby; whilst three more were cruising between Enos and the north-western coast of the Gallipoli Peninsula, in the Gulf of Saros, watching the movements of the Russians.

Under these circumstances the negotiations for the definite signature of peace were carried on. All three countries, England, Turkey, and Russia, were quietly but actively preparing for the worst, and intrigue, diplomacy, and war were mixed up in a conflict for the supremacy, to a degree which made this period one of intense excitement and anxiety. All three countries were trying to find a way out of the wood; but the worst of it was, that even supposing a way was found, it by no means followed that it would suit all three; so that, in fact, three roads had to be cut out of the densest undergrowth of political brushwood that ever perplexed a craftsman.

Thus no one was surprised to hear that the Russians took the opportunity, when the British fleet arrived, to reply by a counter move. On February 21st, General Gourko suddenly left Adrianople, his staff receiving only two hours' notice of his departure; and next day it was known that the whole of the head-quarters' staff, General Ignatieff, and the Diplomatic Chancery, were to start on the following morning for San Stefano, close to the south-western gate of Constantinople, and there was a forward movement of the Russian troops.

This sudden change of plans was coincident with the news of the fall of Server Pasha; and it was this which seemed to have decided the movement, although it had evidently been in contemplation before, as an answer to the coming of the British fleet. The coming of the fleet was the second trump played out to follow the Russian first, and the coming of the Russians to San Stefano was their reply.

However, General Ignatieff was very glad of a good pretext for getting nearer Constantinople. The negotiations had been going on slowly, although Safvet Pasha was supposed to have full powers to treat. But, in fact, he continually refused to accept point after point without orders from Constantinople, and telegraphic communication was constantly mysteriously interrupted. He was three or four days getting an answer. It was the same with the telegrams to General Ignatieff. They were four or five days *en route*.

Then Safvet Pasha was taken ill, and it was with the greatest difficulty General Ignatieff could get him to go on with the work. He wanted, from the first, to await the arrival of Saadoullah Bey from Berlin. He had completely forgotten the whole programme of the conference, and had to be continually referred to it. Again, he did not know the lines of delimitation agreed upon in the armistice, and had no map. He had to accept whatever the Russians told him on this head. One day he complained to General Ignatieff of the depredations of the Circassians in some village south of Sophia, and asked if the Russians could not stop it. General Ignatieff showed him that this village was on the Turkish side of the neutral ground, and therefore it was the business of the Turks to keep order, but offered to send Russian troops there if he wished to punish the Circassians. Under such circumstances it was most difficult to push the negotiations rapidly. General Ignatieff said the end of it would be, that he would have to deliver an *ultimatum* in order to get peace signed.

It is impossible to say whether these delays were caused by the natural and ordinary unreadiness of the Turks, or by a wish to gain time. General Ignatieff thought, or professed to think, that the knowledge of the views of the powers during the conference had much to do with it, and that the Turks imagined that no peace signed under such circumstances could be final and conclusive—a view borne out by subsequent events. Then came news of the fall of Server Pasha, and Safvet said that the negotiations must be suspended until further orders.

This was the last straw on the camel's back. It was immediately decided to go to San Stefano, the consent of the Turks to that step having been previously obtained. The Turks also agreed to abandon the last line of defence, Kujuk Tchekmedje. All these delays gave General Ignatieff the very pretext he wanted to get nearer to Constantinople—a step which he insisted upon most strongly.

The grand duke, hereupon, left Adrianople on February 22nd, with the head-quarters' staff. It was a beautiful day. Everybody was in the best spirits, delighted at the exchange of the muddy streets of Adrianople for the pretty village of San Stefano, on the shores of the Sea of Marmora.

They arrived at Tchataldja about six in the evening. Here General Skobeloff's corps, and part of the guards, were drawn up to receive the grand duke. He reviewed them, and found the troops, having had a rest, in excellent condition; but when on the point of continuing the journey, he was accosted by Tahir Bey, the Turkish officer appointed for regulating the lines of delimitation, who, for some days, had been at Skobeleff's head-quarters. Tahir said that Mukhtar Pasha had had no orders to withdraw his troops from Kujuk Tchekmedje. He could not, therefore, allow the Russian troops to occupy these positions, nor to go to San Stefano.

This was news indeed, and of the most serious nature. The Turks were refusing to do what they had agreed upon, and were stopping the grand duke after allowing him to come as far as Tchataldja. Had the Turks held out, there could have been only

one result—the assault of the Turkish positions next morning at daybreak.

The moment was an exciting one, and for a couple of hours the two enemies seemed again on the brink of war. The telegraph was set going, but nothing seemed to come of it; and, finally, the grand duke grew very angry and indignant. He thought he was being trifled with. The spirit of his father rose within him; and as he walked up, his resemblance to the Emperor Nicholas was striking, and it was still more evident when he called Tahir Bey, and said to him, with an energy that made the latter tremble—"Go and tell Mukhtar Pasha, that when I give an order he must obey it, and at once, or it will be the worse for him. Go."

There was a dead silence for a moment. Everybody felt the gravity of the situation. Tahir withdrew precipitately, sprang upon a locomotive, and in a moment was flying through the darkness down over the line to Kujuk Tchekmedje, as fast as steam could carry him. It was then known by all the officers present, that unless the Turks abandoned the positions instantly, they would be attacked at daylight. The situation was considered very critical. Peace was trembling in the balance, and yet there was not the slightest desire expressed at headquarters for the continuance of the war under any circumstances whatever.

Mr. Gladstone seemed to fear the danger of the army escaping from the control of cooler heads at St. Petersburg. There was not the slightest danger of this. There had not been a move without orders. The British fleet had done its work most effectually, and the Russians knew, best of all, how critical their position was in spite of their apparent advantages, and that they had no chance in a war with England. The aversion of the grand duke for the continuation of the war was shown in a somewhat amusing way. While waiting for the result of Tahir's mission, the question of what was going to happen was criticised in an animated manner. The grand duke, who was excited and indignant at the situation, asked Skobeloff, it is said, what he thought of it. The latter, with the reckless indifference which characterised him, replied—

"For my part, Monseigneur, I think we shall have to fight England."

"Oh, but you are a madman," exclaimed the grand duke in a half-angry manner, turning from him, and spitting as every Russian peasant spits when anything displeases him.

Finally, after two hours, news came that the positions were being evacuated by Mukhtar, and that the Russians were marching in. At midnight the train was again in motion, and at two o'clock on Sunday morning the grand duke was in San Stefano. The line Kujuk Tchekmedje was abandoned completely by Mukhtar, who withdrew his forces behind the little creek that empties itself into the Marmora, half-way between San Stefano and Yedi Kuleh.

The Russians were delighted with the pretty little place. San Stefano, though not a Dutch model of cleanliness at any time, appeared quite clean and bright, after Bulgaria. The weather was delicious, and the quay and sea-shore presented a very animated appearance, lined with officers in brilliant uniforms, ladies, and the population walking up and down, listening to the music played all day long. It was very pleasant to watch the glimmer of the sunshine over the Sea of Marmora, with Mount Olympus in the misty distance. Numerous boats and caïques gave animation to the scene close at hand, and picturesque groups of Cossacks bathing their horses were continually seen. General Ignatieff inhabited a pretty villa, whose walls were washed by the waves, and from the windows of which the minarets of St. Sophia were plainly visible. It was here that peace was to be signed.

As regards the progress of the negotiations, no point had been touched upon but questions relating to Bulgaria, and little advance had been made even in the arrangement of the frontiers. True, the outlines had been generally arranged, but the details in no case had been settled; and it was just on the details the Turks made their chief stand.

When General Ignatieff, to induce Safvet Pasha to hurry the negotiations, told him that the Russian military expenses were 2,000,000 roubles daily, and that for every day's delay this sum would have to be added to the war indemnity, he exclaimed—"But this sum is enormous! Why do you spend so much on your army? We do not spend a tenth of this sum on ours. You pay your officers too much. Your army is too expensive; and it is not right we should pay for it."

Then Safvet objected to Rasgrad being included in Bulgaria, because it was a Mus-

sulman town, although in the middle of a Christian country. General Ignatieff could only reply—"If you will pick up Rasgrad, and carry it bodily out of the country, we shall be glad to get rid of it; but we cannot allow it to remain under Turkish rule as long as it is where it is."

Then the Turks continually harked back to the condition of things before the war, and denied that there were ever any massacres in Bulgaria to the extent asserted by the Russians, and maintained that Edib Effendi's report, which Mr. Schuyler and Mr. Baring called a tissue of falsehoods, was quite correct and truthful. This shows how incorrigible the Turkish officials were. Even after all the disasters brought upon themselves, they still clung to the old story, and refused to see that there was any cause for complaint, or any necessity for reform.

If General Ignatieff had been contented to go back over the old ground, and discuss questions which had been settled long ago, the peace negotiations might have lasted a year. He was continually obliged to recall them to the subject in hand, and pin them down to it. At last, however, what with threats, cajoling, promises, and appeals, the terms of the proposed peace were agreed to on March 3rd.

In General Ignatieff's quarters, in a little house by the sea-side at San Stefano, shaken by the increasing gale that tore across the Sea of Marmora, were busy, all night long, the secretaries of both diplomatic bodies, copying and arranging for the signatures the treaty of peace, the result of the concluded negotiations. All night long Prince Tzereteleff dictated the treaty to his colleague, Chebachoff, who wrote and wrote through the long hours until the document was finished. Although wearied by continuous labour, these two secretaries, appreciating the value of their work, kept at their task, only stopping for refreshment and to listen to the scratch of the reeds of the Turkish secretaries in an adjoining room, busy with their own copy, until the dull dawn found them still at the table, Countess Ignatieff herself looking in every now and then to see that they were not neglecting their work. Then, the last word being on paper, they slept amid the confusion of documents, maps, and volumes.

Scarcely was it daylight when, notwithstanding the storm, there was an unusual movement in the village. There was a general idea that peace was to be signed that day. The steamers from Constantinople came rolling along through the rough sea, overladen with excursionists attracted by the review which had been announced to take place in celebration of the anniversary of the Czar's accession to the throne. Greeks, Bulgarians, Turks, and Russians crowded the little village, besieging the restaurants, swarming about the doors of houses whence were supposed to issue some of the great personages who were to become famous in history, all impatiently awaiting the hour of 2 P.M., the appointed time of the review. The horses of the grand duke and his staff were gathered about the entrance to his quarters, and keen-eyed spectators, ready to interpret the slightest movement of the commander-in-chief, formed unbroken ranks around the group of horses in the street.

One o'clock passed. Two o'clock passed, and still no movement. People began to grow serious, began to feel that something was in the air—were sure that this was the decisive moment—that peace and war were trembling in the scale; and one said to the other, "This is an event in history;" and each believed himself an actor in the scene—such was the impressiveness of the hour. At length word was given out that the review was postponed until three o'clock; but that hour came and went, and brought only another postponement for an hour. Later, rain fell, but the people remained at their posts.

At last their patience was rewarded. About four o'clock the grand duke mounted, and rode to the Diplomatic Chancery, where he asked at the door, "Is it ready?" and then galloped towards the hill where the army was drawn up. Here he halted again for a few moments. Finally, a carriage came whirling out of the village. General Ignatieff was in it; and when he approached, he rose and said—"I have the honour to congratulate your imperial highness on the signature of peace."

There was a long loud shout. Then the grand duke, followed by about 100 officers, dashed forward to where the troops were formed on rising ground close by the sea-coast, just behind San Stefano lighthouse, and began riding along the lines. As he passed, the soldiers did not know that peace had been signed, as it was still unannounced; but soon the news spread, and the cheering grew louder and more enthusiastic. There were Schouvaloff's and Rauch's divisions,

with the sharpshooters of the guard, and cavalry and artillery in line, and the grand duke passed between the ranks in review. Very different, indeed, was the appearance of these soldiers then, and that of the same men months before. During their interval of rest they had patched and cleaned their clothes, repaired and polished their boots, washed and brushed up generally, so that they looked as trim and neat as could be.

After riding between the lines, the grand duke halted on a little eminence, whence all the troops could be seen, and formally made the announcement of the peace:—

"I have the honour to inform the army that, with the help of God, we have concluded a treaty of peace."

Then another shout burst forth from 20,000 throats, rising, swelling, and dying away. There was a general feeling of relief and satisfaction. Still, the news of peace was not greeted with anything like the wild excitement and enthusiasm caused by the emperor's proclamation of war at Kischeneff. There stood the famous regiment of Peter the Great, the Praobrajensky, often the first to attack in many of the late battles of the war. There were the troops who had faced the enemy on the bleak summits of the Balkans at Baba Konak for a long, cold, and terrible month. There were the men who had toilod over the slippery mountain paths, scantily fed, thinly dressed, dragging the heavy guns across into the valley, finding, after their struggles with cold, hunger, and fatigue, a desperate enemy to resist them on every hill-top. These were the same brave fellows who had made the long march from Sophia to Philippopoli, who had run that race for enormous stakes with Suleiman's army, and finally thrown their great force against the wall of the Rhodope mountains, and smashed it to pieces. These were the men whose courage, devotion, and unparalleled endurance will go down to history.

And there, gathered scarcely more than a rifle-shot away, was the enemy they had found worthy of their steel. For on the crest of the neighbouring hill stood the Turks in groups, interested spectators of the scene—those very fellows who had kept the snowy ridge of Shandarnik, defending gallantly the great gate of Roumelia; and who at last, after a memorable retreat, had fought like heroes on the hills of Stanimaka. These two armies stood looking at each other at this moment of final peace: like true soldiers they had learned to respect and esteem each other, and welcomed peace as an honourable finish to the fight which they cared not to prolong. It was the beginning of a new friendship formed on the basis of actual experience of qualities that had hitherto been unrecognised.

After the review, gathering his officers about him where the priest stood ready for the *Te Deum*, the grand duke spoke briefly and emphatically, saying—

"To an army which has accomplished what you have, my friends, nothing is impossible."

Then all dismounted, uncovered, and a solemn service was conducted, the soldiers all kneeling. A few ladies were present at this ceremony; among them Madame Ignatieff, kneeling on a fur rug beside her carriage.

All the generals except Skobeloff were in attendance. He was back in Tchataldja. Baron Loenhausen and Captain Bolla, the Austrian military *attachés*, the former wearing the Cross of St. Vladimir, received for coolness under fire; the latter with the St. George, for acting as Skobeloff's aide-de-camp on the day he took the redoubts on the Lovatz road; Colonel Gaillard, the French *attaché*, who had been with the grand duke ever since the army was mobilised, eighteen months back, decorated with the St. Vladimir around his neck; Major Liegnitz, the Prussian *attaché*, with the St. George, for services at the Grivitza redoubt; Lieutenant Green, the American *attaché*, wearing the St. Vladimir for the last Balkan campaign; and, finally, two Swiss *attachés*, who had arrived just in time for the *Te Deum*.

The religious ceremony over, the grand duke took his stand, and the army began to file past with a swinging rapid stride, in forcible contrast with the weary pace with which they used to drag themselves slowly along at the end of their long and exhausting marches, scarcely, at times, able to put one foot before the other. The night was falling, and darkness settled quickly over the scene; but the grand duke sat immovable on his horse whilst the troops were still passing, and listened to their joyful shouts ringing in the air, and the measured tramp, tramp going off in the darkness.

And it was fit that the ceremony should end in darkness; for the instrument just signed was the signal for a period of darkness and general anxiety that has not been

equalled since the great wars of Napoleon I. After the usual preambles, this document, known as the treaty of San Stefano, ran as follows:—

ART. 1.—In order to put an end to the perpetual conflicts between Turkey and Montenegro, the frontier which separates the two countries will be rectified conformably to the map hereto annexed, subject to the reserve hereinafter mentioned, in the following manner:—From the mountain of Dobrostitza the frontier will follow the line indicated by the Conference of Constantinople as far as Korito by Bilek. Thence the new frontier will run to Gatzko (Metochia-Gatzko will belong to Montenegro), and towards the confluence of the Piva and the Tara, ascending towards the north by the Drina as far as its confluence with the Lim. The eastern frontier of the principality will follow this last river as far as Prijepolje, and will proceed by Roshaj to Sukha-Planina (leaving Bihor and Roshaj to Montenegro). Taking in Bugovo, Plava, and Gusinje, the frontier line will follow the chain of mountains by Shlieb, Paklen, and along the northern frontier of Albania by the crests of the mountains Koprivnik, Babavik, Borvik, to the highest peak of Prokleti. From that point the frontier will proceed by the summit of Biskaschik, and will run in a straight line to the lake of Tjiceni-Hoti. Dividing Tjiceni-Hoti and Tjiceni-Klastrati, it will cross the lake of Scutari to the Boyana, the thalweg of which it will follow as far as the sea. Niksich, Spuss, Gatzko, Podgoritza, Jabliak, and Antivari will remain to Montenegro. A European commission, on which the Sublime Porte and the government of Montenegro shall be represented, will be charged with fixing the definite limits of the principality, making on the spot such modifications in the general tracing as it may think necessary and equitable, from the point of view of the respective interests and tranquillity of the two countries, to which it will accord in this respect the equivalents deemed necessary. The navigation of the Boyana having always given rise to disputes between the Sublime Porte and Montenegro, will be the subject of a special regulation, which will be prepared by the same European commission.

ART. 2.—The Sublime Porte recognises definitively the independence of the principality of Montenegro. An understanding between the imperial government of Russia, the Ottoman government, and the principality of Montenegro will determine subsequently the character and form of the relations between the Sublime Porte and the principality as regards particularly the establishment of Montenegrin agents at Constantinople, and in certain localities of the Ottoman empire, where the necessity for such agents shall be recognised, the extradition of fugitive criminals on the one territory or the other, and the subjection of Montenegrins travelling or sojourning in the Ottoman empire to the Ottoman laws and authorities, according to the principles of international law and the established usages concerning the Montenegrins. A convention will be concluded between the Sublime Porte and Montenegro to regulate the questions connected with the relations between the inhabitants of the confines of the two countries and with the military works on the same confines. The points upon which an understanding cannot be established will be settled by the arbitration of Russia and Austria-Hungary. Henceforward, if there is any discussion or conflict, except as regards new territorial demands, Turkey and Montenegro will leave the settlement of their differences to Russia and Austria-Hungary, who will arbitrate in common. The troops of Montenegro will be bound to evacuate the territory not comprised within the limits indicated above within ten days from the signature of the preliminaries of peace.

ART. 3.—Servia is recognised as independent. Its frontier, marked on the annexed map, will follow the thalweg of the Drina, leaving Little Zwornik and Zakar to the principality, and following the old limit as far as the sources of the stream Dezevo, near Stoilac. Thence the new line will follow the course of that stream as far as the river Raska, and then the course of the latter as far as Novi-Bazar. From Novi-Bazar, ascending the stream which passes near the villages of Mekinje and Irgoviste as far as its source, the frontier line will run by Bosur Planina, in the valley of the Ibar, and will then descend the stream which falls into this river near the village of Ribanic. The line will then follow the course of the rivers Ibar, Sitnitza, and Lab, and of the brook Batintze to its source (upon the Grapachnitza Planina). Thence the frontier will follow the heights which separate the waters of the Kriva and the Veternitza, and will meet the latter river by the

shortest route at the mouth of the stream Miovatzka, which it will ascend, crossing the Miovatzka Planina and redescending towards the Morava, near the village of Kalimanci. From this point the frontier will descend the Morava as far as the river Vlossina, near the village of Staikovtzi. Reascending the latter river, as well as the Linberazda, and the brook Koukavitze, the line will pass by the Sukha Planina, will run along the stream Vrylo as far as the Nisawa, and will descend the said river as far as the village of Kronpatz, whence the line will rejoin by the shortest route the old Servian frontier to the south-east of Karaoul Baré, and will not leave it until it reaches the Danube. Ada-Kale will be evacuated and razed. A Turco-Servian commission, assisted by a Russian commissioner, will, within three months, arrange upon the spot the definite frontier line, and will definitively settle the questions relating to the islands of the Drina. A Bulgarian delegate will be admitted to participate in the work of the commission when it shall be engaged on the frontier between Servia and Bulgaria.

ART. 4.—The Mussulmans holding lands in the territories annexed to Servia, and who wish to reside out of the principality, can preserve their real property by having them farmed out or administered by others. A Turco-Servian commission, assisted by a Russian commissioner, will be charged to decide absolutely, in the course of two years, all questions relating to the verification of real estate in which Mussulman interests are concerned. This commission will also be called upon to settle within three years the method of alienation of State property and of religious endowments (Vacouf), as well as the questions relative to the interests of private persons which may be involved. Until a direct treaty is concluded between Turkey and Servia determining the character of the relations between the Sublime Porte and the principality, Servian subjects travelling or sojourning in the Ottoman empire shall be treated according to the general principles of international law. The Servian troops shall be bound to evacuate the territory not comprised within the above-mentioned limits within fifteen days from the signature of the preliminaries of peace.

ART. 5.—The Sublime Porte recognises the independence of Roumania, which will establish its right to an indemnity, to be discussed between the two countries. Until the conclusion of a direct treaty between Turkey and Roumania, Roumanian subjects will enjoy in Turkey all the rights guaranteed to the subjects of other European Powers.

ART. 6.—Bulgaria is constituted an autonomous tributary principality, with a Christian government and a national militia. The definitive frontiers of the Bulgarian principality will be traced by a special Russo-Turkish commission before the evacuation of Roumelia by the imperial Russian army. This commission will, in working out the modifications to be made on the spot in the general tracing, take into account the principle of the nationality of the majority of the inhabitants of the border districts, conformably to the bases of peace, and also the topographical necessities and practical interests of the intercommunication of the local population. The extent of the Bulgarian principality is laid down in general terms on the accompanying map, which will serve as a basis for the definitive fixing of the limits. Leaving the new frontier of the Servian principality, the line will follow the western limit of the Caza of Wrania as far as the chain of the Kara Dagh. Turning towards the west, the line will follow the western limits of the Cazas of Koumanovo, Kotchani, Kalkandelen, to Mount Korab; thence by the river Welestchitza as far as its junction with the Black Drina. Turning towards the south by the Drina, and afterwards by the western limit of the Caza of Ochride towards Mount Linas, the frontier will follow the western limits of the Cazas of Gortcha and Starovo as far as Mount Grammos. Then by the lake of Kastoria, the frontier line will rejoin the river Moglenitza, and after having followed its course, and passed to the south of Yanitza (Wardar Yenidje), will go by the mouth of the Wardar, and by the Galliko, towards the villages of Parga and of Saraï-keui; thence through the middle of Lake Bechik-Guel to the mouth of the rivers Strouma and Karassou, and by the sea-coast as far as Buru-Guel; thence striking north-west towards Mount Tchaltepe, by the chain of Rhodope as far as Mount Krouschowo, by the Black Balkans (Kara-Balkan), by the mountains Eschekkoulatchi, Tchepelion, Karakolas, and Tschiklar, as far as the river Arda. Thence the line will be traced in the direction of the town of Tchirmen, and leaving the town of Adrianople to the south, by the villages of Sugutlion, Kara-Hamza, Arnaout-keui,

Akardji, and Enidje, as far as the river Tekederessi. Following the rivers Tekederessi and Tchorlouderessi as far as Loule-Bourgaz, and thence, by the river Soudjakdere as far as the village of Serguen, the frontier line will go by the heights straight towards Hakim-tabiassi, where it will strike the Black Sea. It will leave the sea-coast near Mangalia, following the southern boundaries of the Sandjak of Toultcha, and will come out on the Danube above Rassova.

ART. 7.—The Prince of Bulgaria shall be freely elected by the population, and confirmed by the Sublime Porte, with the assent of the Powers. No member of the reigning dynasties of the great European Powers shall be capable of being elected Prince of Bulgaria. In the event of the dignity of Prince of Bulgaria being vacant, the election of the new prince shall be made subject to the same conditions and forms. Before the election of the prince, an assembly of Bulgarian notables, to be convoked at Philippopoli (Plowdiw) or Tyrnowo, shall draw up, under the superintendence of an imperial Russian commissioner, and in the presence of an Ottoman commissioner, the organisation of the future administration, in conformity with the precedents established in 1830 after the peace of Adrianople, in the Danubian principalities. In the localities where Bulgarians are mixed with Turks, Greeks, Wallachians (Koutzo-Vlachs), or others, proper account is to be taken of the rights and interests of these populations in the elections, and in the preparation of the organic laws. The introduction of the new system into Bulgaria, and the superintendence of its working, will be entrusted for two years to an imperial Russian commissioner. At the expiration of the first year after the introduction of the new system, and if an understanding on this subject has been established between Russia, the Sublime Porte, and the cabinets of Europe, they can, if it is deemed necessary, associate special delegates with the imperial Russian commissioner.

ART. 8.—The Ottoman army will no longer remain in Bulgaria, and all the ancient fortresses will be razed at the expense of the local government. The Sublime Porte will have the right to dispose, as it sees fit, of the war material, and of the other property belonging to the Ottoman government, which may have been left in the Danubian fortresses already evacuated, in accordance with the terms of the armistice of the $\frac{19th}{31st}$ January, as well as of that in the strongholds of Schoumla and Varna. Until the complete formation of a native militia sufficient to preserve order, security, and tranquillity, and the strength of which will be fixed later on by an understanding between the Ottoman government and the imperial Russian cabinet, Russian troops will occupy the country, and will give armed assistance to the commissioner in case of need. This occupation will also be limited to a term approximating to two years. The strength of the Russian army of occupation, to be composed of six divisions of infantry and two of cavalry, which will remain in Bulgaria after the evacuation of Turkey by the imperial army, shall not exceed 50,000 men. It will be maintained at the expense of the country occupied. The Russian troops of occupation in Bulgaria will maintain their communications with Russia, not only through Roumania, but also by the ports of the Black Sea, Varna, and Bourgas, where they may organise, for the term of the occupation, the necessary depôts.

ART. 9.—The amount of the annual tribute which Bulgaria is to pay the Suzerain Court, by transmitting it to a bank to be hereafter named by the Sublime Porte, will be determined by an agreement between Russia, the Ottoman government, and the other cabinets, at the end of the first year during which the new organisation shall be in operation. This tribute will be calculated on the average revenue of all the territory which is to form part of the principality. Bulgaria will take upon itself the obligations of the imperial Ottoman government towards the Rustzuk and Varna Railway Company, after an agreement has been come to between the Sublime Porte, the government of the principality, and the directors of this company. The regulations as to the other railways (*voies ferrées*) which cross the principality, are also reserved for an agreement between the Sublime Porte, the government established in Bulgaria, and the directors of the companies concerned.

ART. 10.—The Sublime Porte shall have the right to make use of Bulgaria for the transport, by fixed routes, of its troops, munitions, and provisions to the provinces beyond the principality, and *vice versâ*. In order to avoid difficulties and misunderstandings in the application of this right, while guaranteeing the military necessities of the Sublime Porte, a special regulation will lay down the conditions of it within

three months after the ratification of the present Act by an understanding between the Sublime Porte and the Bulgarian government. It is fully understood that this right is limited to the regular Ottoman troops, and that the irregulars, the Bashi-Bazouks, and the Circassians will be absolutely excluded from it. The Sublime Porte also reserves to itself the right of sending its postal service through the principality, and of maintaining telegraphic communication. These two points shall also be determined in the manner, and within the period of time, indicated above.

ART. 11.—The Mussulman proprietors, or others, who fix their personal residence outside the principality, may retain their estates by having them farmed or administered by others. Turko-Bulgarian commissions shall sit in the principal centres of population, under the superintendence of Russian commissioners, to decide absolutely, in the course of two years, all questions relative to the verification of real property in which either Mussulmans or others may be interested. Similar commissions will be charged with the duty of regulating, within two years, all questions relative to the mode of alienation, working, or use, for the benefit of the Sublime Porte, of the property of the State, and of the religious endowments (*Vacouf*). At the expiration of the two years mentioned above, all properties which shall not have been claimed shall be sold by public auction, and the proceeds thereof shall be devoted to the support of the widows and orphans, Mussulman as well as Christian, victims of the recent events.

ART. 12.—All the Danubian fortresses shall be razed. There shall be no strongholds in the future on the banks of this river, nor any men-of-war in the waters of the principalities of Roumania, Servia, and Bulgaria, except the usual *stationnaires* and the small vessels intended for river-police and custom-house purposes. The rights, obligations, and prerogatives of the international commission of the Lower Danube are maintained intact.

ART. 13.—The Sublime Porte undertakes to render the passage of Soulina again navigable, and to indemnify the private individuals who have suffered loss by the war and the interruption of the navigation of the Danube, applying for this double charge a sum of 500,000 francs from the amount due to the Sublime Porte from the Danubian commission.

ART. 14.—The European proposals communicated to the Ottoman plenipotentiaries at the first sitting of the Constantinople Conference shall immediately be introduced into Bosnia and Herzegovina, with any modifications which may be agreed upon in common between the Sublime Porte, the government of Russia, and that of Austria-Hungary. The payment of arrears of taxes shall not be required, and the current revenues of these provinces, until the 1st of March, 1880, shall be exclusively applied to indemnify the families of refugees and inhabitants, victims of recent events, without distinction of race or creed, as well as to the local needs of the country. The sum to be received annually after this period by the central government, shall be subsequently fixed by a special understanding between Turkey, Rnssia, and Austria-Hungary.

ART. 15.—The Sublime Porte engages to apply scrupulously in the island of Crete, the Organic Law of 1868, taking into account the previously expressed wishes of the native population. An analogous law adapted to local requirements shall likewise be introduced into Epirus, Thessaly, and the other parts of Turkey in Europe for which a special constitution is not provided by the present Act. Special commissions, in which the native population will be largely represented, shall in each province be entrusted with the task of elaborating the details of the new organisation, and the result of their labours shall be submitted to the Sublime Porte, who will consult the imperial government of Russia before carrying it into effect.

ART. 16.—As the evacuation by the Russian troops of the territory which they occupy in Armenia, and which is to be restored to Turkey, might give rise to conflicts and complications detrimental to the maintenance of good relations between the two countries, the Sublime Porte engages to carry into effect, without further delay, the improvements and reforms demanded by local requirements in the provinces inhabited by Armenians, and to guarantee their security from Kurds and Circassians.

ART. 17.—A full and complete amnesty is granted by the Sublime Porte to all Ottoman subjects compromised by recent events, and all persons imprisoned on this account, or sent into exile, shall be immediately set at liberty.

ART. 18.—The Sublime Porte will take into serious consideration the opinion expressed by the commissioners of the mediating Powers as regards the possession of the town of Khotour, and engages to have the works of the definitive delimitation of the Turco-Persian boundary carried into effect.

ART. 19.—The war indemnities and the losses imposed on Russia, which his majesty the Emperor of Russia claims, and which the Sublime Porte has bound itself to reimburse to him, consist of—

(*a.*) 900,000,000 roubles for war expenses (maintenance of the army, replacing of war material, and war contracts).

(*b.*) 400,000,000 roubles on account of damage done to the south coast of Russia, to her export commerce, to her industries, and to her railways.

(*c.*) 100,000,000 roubles for injuries inflicted on the Caucasus by the invasion; and,

(*d.*) 10,000,000 roubles for costs and damages of Russian subjects and establishments in Turkey. Total, 1,410,000,000 roubles. Taking into consideration the financial embarrassments of Turkey, and in accordance with the wishes of his majesty the Sultan, the Emperor of Russia consents to substitute for the payment of the greater part of the moneys enumerated in the above paragraph, the following territorial cessions:—

(*a.*) The Sandjak of Toultcha, that is to say, the districts (Cazas) of Kilia, Soulina, Mahmoudié, Isaktcha, Toultcha, Matchine, Babadagh, Hirsowo, Kustendje, and Medjidie, as well as the Delta Islands and the Isle of Serpents. Not wishing, however, to annex this territory and the Delta Islands, Russia reserves the right of exchanging them for the part of Bessarabia detached from her by the Treaty of 1856, and which is bounded on the south by the thalweg of the Kilia branch and the mouth of the Stary-Stamboul. The question of the apportionment of waters and fisheries shall be determined by a Russo-Roumanian commission within a year after the ratification of the Treaty of Peace.

(*b.*) Ardahan, Kars, Batoum, Bayazet, and the territory as far as the Saganlough. In its general outline, the frontier line, leaving the Black Sea coast, will follow the crest of the mountains which separate the affluents of the river Hopa from those of the river Tcharokh, and the chain of the mountains to the south of the town of Artwin, up the river Tcharokh, near the villages of Alat and Bechaget; then the frontier will pass by the peaks of Mounts Dervenikghek, Hortchezor, and Bedjiguin-Dagh, by the crest which separates the affluents of the rivers Tortoum-tchaï and the Tcharokh, by the heights near Zaily-Vihine, coming down at the village Vihine-Kilissa to the river Tortoum-tchaï; thence it will follow the Sivridagh chain to the pass (*col*) of the same name, passing south of the village of Noriman; then it will turn to the south-east and go to Zivine, whence the frontier, passing west of the road which leads from Zivine to the villages of Ardost and Horassan, will turn south by the Saganlough chain to the village of Gilitchman; then by the crest of the Charion-Dagh it will arrive, ten versts south of Hamour, at the Mouradtchaï defile; then the line will follow the crest of the Alla-Dagh, and the summits of the Hori and Tandourek, and passing south of the Bayazet valley, will proceed to rejoin the old Turco-Persian frontier to the south of the lake of Kazli-gueul. The definitive limits of the territory annexed to Russia, and indicated on the map hereto appended, will be fixed by a commission composed of Russian and Ottoman delegates. This commission, in its labours, will take into account the topography of localities, as well as considerations of good administration, and other conditions calculated to insure the tranquillity of the country.

(*c.*) The territories mentioned in paragraphs (*a*) and (*b*) are ceded to Russia as an equivalent for the sum of one milliard and one hundred million roubles. As for the rest of the indemnity, apart from the 10,000,000 of roubles intended to indemnify Russian interests and establishments in Turkey—namely, 300,000,000 of roubles—the mode of payment and guarantee of that sum shall be settled by an understanding between the imperial government of Russia and that of his majesty the Sultan.

(*d.*) The 10,000,000 roubles claimed as indemnity for the Russian subjects and establishments in Turkey, shall be paid as soon as the claims of those interested are examined by the Russian embassy at Constantinople and handed to the Sublime Porte.

ART. 20.—The Sublime Porte will take effective steps to put an amicable end to the law-suits of Russian subjects pending for several years, to indemnify the latter if

need be, and to carry into effect, without delay, all judgments passed.

ART. 21.—The inhabitants of the districts ceded to Russia who wish to take up their residence out of these territories, will be free to retire on selling all their real property. For this purpose an interval of three years is granted them, counting from the date of ratification of the present Act. On the expiration of that time, those of the inhabitants who shall not have sold their real property and left the country shall remain Russian subjects. Real property belonging to the State, or to religious establishments situated out of the localities aforesaid, shall be sold within the same interval of three years as shall be arranged by a special Russo-Turkish commission. The same commission shall be entrusted with determining how the Ottoman government is to remove its war material, munitions, supplies, and other State property actually in the forts, towns, and localities ceded to Russia, and not at present occupied by Russian troops.

ART. 22.—Russian ecclesiastics, pilgrims, and monks travelling or sojourning in Turkey in Europe or in Asia, shall enjoy the same rights, advantages, and privileges as the foreign ecclesiastics of any other nationality. The right of official protection by the imperial embassy and Russian consulates in Turkey is recognised, both as regards the persons above-mentioned, and their possessions, religious houses, charitable institutions, &c., in the the Holy Places and elsewhere. The monks of Mount Athos, of Russian origin, shall be maintained in all their possessions and former privileges, and shall continue to enjoy, in the three convents belonging to them, and in the adjoining buildings, the same rights and privileges as are assured to the other religious establishments and convents of Mount Athos.

ART. 23.—All the treaties, conventions, and agreements previously concluded between the two high contracting parties relative to commerce, jurisdiction, and the position of Russian subjects in Turkey, and which had been abrogated by the state of war, shall come into force again, with the exception of the clauses affected by the present Act. The two governments will be placed again in the same relation to one another, with respect to all their engagements and commercial and other relations, as they were in before the declaration of war.

ART. 24.—The Bosphorus and the Dardanelles shall remain open in time of war as in time of peace to the merchant-vessels of neutral States arriving from or bound to Russian ports. The Sublime Porte consequently engages never henceforth to establish at the ports of the Black Sea and the Sea of Azov, a fictitious blockade (*blocus fictif*), at variance with the spirit of the declaration signed at Paris on the $\frac{4}{16}$th of April, 1856.

ART. 25.—The complete evacuation of Turkey in Europe, with the exception of Bulgaria, by the Russian army will take place within three months after the conclusion of the definitive peace between his majesty the Emperor of Russia and his majesty the Sultan. In order to save time, and to avoid the cost of the prolonged maintenance of the Russian troops in Turkey and Roumania, part of the imperial army may proceed to the ports of the Black Sea and the Sea of Marmora, to be there shipped in vessels belonging to the Russian government or chartered for the occasion. The evacuation of Turkey in Asia will be effected within the space of six months, dating from the conclusion of the definitive peace, and the Russian troops will be entitled to take ship at Trebizond, in order to return by the Caucasus or the Crimea. The operations of the evacuation will begin immediately after the exchange of ratifications.

ART. 26.—As long as the imperial Russian troops remain in the localities which, in conformity with the present Act, will be restored to the Sublime Porte, the administration and order of affairs will continue in the same state as has existed since the occupation. The Sublime Porte will not participate therein during all that time, nor until the entire departure of all the troops. The Ottoman forces shall not enter the places to be restored to the Sublime Porte, and the Sublime Porte cannot begin to exercise its authority there, until notice of each fortress and province having been evacuated by the Russian troops shall have been given by the commander of these troops to the officer appointed for this purpose by the Sublime Porte.

ART. 27.—The Sublime Porte undertakes not to punish in any manner, or allow to be punished, those Ottoman subjects who may have been compromised by their relations with the Russian army during the war. In the event of any persons wishing to withdraw with their families when the Russian

troops leave, the Ottoman authorities shall not oppose their departure.

ART. 28.—Immediately upon the ratification of the preliminaries of peace, the prisoners of war shall be reciprocally restored under the care of special commissioners appointed on both sides, who, for this purpose, shall go to Odessa and Sebastopol. The Ottoman government will pay all the expenses of the maintenance of the prisoners that are returned to them, in eighteen equal instalments in the space of six years, in accordance with the accounts that will be drawn up by the abovementioned commissioners. The exchange of prisoners between the Ottoman government and the governments of Roumania, Servia, and Montenegro, will be made on the same bases, deducting, however, in the account, the number of prisoners restored by the Ottoman government, from the number of prisoners that will have to be restored to that government.

ART. 29.—The present Act shall be ratified by their imperial majesties the Emperor of Russia and the Emperor of the Ottomans, and the ratifications shall be exchanged in fifteen days, or sooner if possible, at St. Petersburg, where, likewise, an agreement shall be come to as to the place and the time at which the stipulations of the present Act shall be invested with all the solemn forms usually observed in treaties of peace. It is, however, well understood, that the high contracting parties consider themselves as formally bound by the present Act from the moment of its ratification.

In witness whereof the respective plenipotentiaries have appended their signatures and seals to the present Act.

Done at San Stefano, the nineteenth February, third March, one thousand eight hundred and seventy-eight.

Final paragraph of Article 11 of the Act of the Preliminaries of Peace, signed this day, February 19, March 3, 1878, which was omitted, and which should form an integral part of the said Article:—

The inhabitants of the principality of Bulgaria, when travelling or sojourning in the other parts of the Ottoman empire, shall be subject to the Ottoman laws and authorities.

San Stefano, February 19, March 3, 1878.

CHAPTER XXXIII.

THE NAVAL OPERATIONS AND DESCENT ON THE CAUCASIAN COAST.

THOUGH the naval operations of the Turks and Russians during the war, as well as the descent on the Caucasian coast, were so utterly insignificant in their extent and results as to make it unadvisable to break the thread of the narrative, some mention may now be made of them in order to complete the picture of the war.

Still, insignificant as were the results of the operations of the Turkish and Russian navies, the very fact is of considerable interest, as showing what small results are to be expected from so expensive and dangerous an institution—dangerous to friends more than to foes—as an ironclad fleet.

Without entering into any learned technical discussion as to the relative merits of ironclads, wooden vessels, torpedoes, &c., and the claims of those interested in their manufacture, it is almost impossible for a layman not to endorse the assertion of Prince Bismarck—made, it is true, in reference to another matter—that whales cannot make war upon elephants.

The duties of a navy, and what is expected from a fleet, differ very much now-a-days from what they were, and what was expected from men-of-war in the days when the naval supremacy of England was at its height. Then ships made war upon ships—fleet was pitted against fleet—cruisers scoured the seas, chasing the enemies' trans-

ports, convoys, and merchantmen; and it was only on rare occasions, comparatively speaking, that a fleet was pitted against land defences.

Now, however, the idea seems to be, that if the enemy possesses a mighty fortress by the sea, a still mightier floating fortress, in the shape of an ironclad, is to be steered up to it and be pitted against it; whilst, to protect his land fortress, the enemy follows suit, and constructs his ironclads likewise. They mostly go to the bottom, however, or are blown up, or otherwise suddenly disappear—especially in times of peace—like the *Captain*, the *Vanguard*, and the *Grosser Kurfürst*. At most they have hitherto been saved by carefully remaining at home, like the celebrated Popoffkas; and when they are expected to begin to do their work, they unaccountably blow up like the *Lutfi Djelil* In fact, so far, the moral to be deduced from the fable of the earthenware pot and the iron kettle, does not at all apply to the case of ironclad *versus* wooden ship.

These doubts and fears were very generally diffused, not only amongst the public, but also amongst naval men and scientific constructors; and when the war between Turkey and Russia commenced, the world expected a fine and interesting display of skill, and a highly instructive course of naval warfare.

As usual, the world was disappointed, and all the results were of so negative a character, that the way has been paved to the question, which is sure to arise on the first failure of the fleet to accomplish its mission—whereunto is an ironclad fleet good? And the reply to that question will raise the consequent one—namely, whether it will not be better to revert to the old system, and keep ships to fight against ships, and not against stone walls on dry land? It is said—indeed, it is a fact—that during the Abyssinian war, the ironclad squadron was ordered to proceed to Gondar, or as near to it as possible. But, as that interesting place was some 300 miles inland, on the top of a high mountain in the heart of Africa, the squadron punctually obeyed orders by steaming to Massowah—the nearest point possible—which, however, happened to be 300 miles away from Gondar. Ridiculous as this incident was, it is not more ridiculous than to expect a fleet to successfully compete with land fortifications, on which cannon of any calibre necessary to pierce an ironclad can be mounted, and destroy it before it even comes within range, to say nothing of the torpedoes which can safely be launched against it.

It is true that the Turks might have made much more use of their fleet than they did, had it not been for two circumstances. But as these circumstances were unavoidable, and are sure to recur in any war, the results of any future operations by ironclads will probably have also to be described with a "might have been." These circumstances are: firstly, the terror of torpedoes, which more or less paralyse the men; and, secondly, the aversion to risk the loss of such costly articles of naval luxury. In fact, like many other articles of luxury, the ironclad seems to be more calculated for show than for use. In this respect, in daring of men and commanders, and general handiness, the Russians showed to much better advantage than the Turks.

When the war broke out, the Turks had a flotilla on the Danube consisting of the following vessels:—*Fethi Islam* (Moslem Victory), *Burywidelan* (Heart-piercer), *Semendria*, *Scodra*, and *Podgoritza*. These five vessels were small craft about 115 feet long, fitted with 80-horse power engines, and carried, each of them, two 80-pounder Armstrong guns in a battery protected by 2-inch armour. In addition to these armoured gun-boats, there were two of recent construction, and much more formidable in every respect, the *Isher* (Lion) and *Saiffee* (Sword). They each carried two 80-pounder Krupp guns in revolving turrets on the upper deck, protected by 3-inch armour, and a belt of the same thickness was placed round the water-line. Their length was 120 feet, and the horse-power of the engines 100. These seven vessels, however, did not form the whole of the naval force, as there were several wooden steamers armed as gun-boats; and soon after the war, the two large sea-going monitors, *Lutfi-Djelil* and *Hiftzi Rahman*, were sent up the Sulina branch into the main river. These last-named ships were a most valuable addition to the defence, and gave great trouble at first to the Russian batteries, until one of them came to an end, as we have already related, in a somewhat inexplicable manner—by accident, the Turks say; by the effect of their artillery fire, the Russians: and thus the affair remains in dispute. The evidence inclines in favour of the Turkish view, for the *Lutfi-Djelil* had

been out of action for nearly an hour when the catastrophe, by which so many human beings were killed, took place. At all events, the fruits of victory were to the Russians, even though they had been in nowise instrumental in her destruction. Up to this time nothing had been seen of the Russian torpedoes, though a good deal was said about the Danube having been mined; and Hobart Pasha was supposed to have run the gauntlet of all sorts of dangers in the *Rethymo:* but the manner in which the Turkish ships moved about, is sufficient evidence that nothing in that way had been done at that time to the main river.

When war was declared the Russians had nothing afloat on the Danube, though they had a steam-launch or so at Ismail or Vilcova, on the Kilia branch, and had some eight or ten, all ready for launching, at Galatz, to be used as torpedo boats. Their first care was necessarily the bridge over the Sereth; and to protect this against the Turkish gun-boats, a number of torpedoes were unquestionably placed across the channel where its waters flow into the Danube. In a short time, however, the Russians were prepared to take the offensive with their torpedo launches, and the first fruits was the destruction of the gun-boat *Saiffee*. The batteries erected along the Roumanian shore soon put a stop to the circulation of the Turkish gun-boats, and the flotilla was shortly afterwards blocked up in various places by lines of torpedoes laid across the stream. The Turks themselves assisted to this end by keeping the greater number of the vessels moored under the fortifications of Widdin, Silistria, Nicopoli, and Rustzuk, instead of making them move up and down to gall the Russian workmen with their fire, and thus impede the erection of the hostile batteries. The conduct, at this period, of those charged with the defence of the Ottoman empire is really inexplicable. They acted as if it had never been their intention to defend the Danube at all; not the slightest opposition was offered to the progress of the enemy's works on the opposite side of the river, and no provision at all was made for the movements of the gun-boats.

There was no depôt of coals at any of the above-named fortresses; and it was only by an arrangement with the Varna Railway Company that a small quantity of fuel was obtained at Rustzuk. The supineness of the Turkish naval authorities in this respect is extraordinary; for, properly made use of, this flotilla would have delayed the Russian passage for weeks. There was an admiral sent to command the gun-boats at least a fortnight before the war, and the state of the coal depôts must have been known weeks before the hostilities actually commenced. Hobart Pasha is in nowise responsible for what occurred, for Abdul Kerim deliberately refused to allow him in any way to interfere with the arrangements that had been made for the disposal of the squadron. When the Russians crossed at Sistova there was a gun-boat looking on quietly, and as if regarding the passage of a friendly army, instead of hostile foes bent upon the destruction of Turkish power; and after a time she steamed away to report the news at head-quarters. The meaning of all this, as well as the general neglect of the Danube line of defence in the first instance, we shall never know, for the Turks are very lenient to military and political offenders; and such are the ramifications of their intrigues, that once an examination were opened, no one could say where it could be decently closed without allowing, perhaps, the most culpable offenders to escape. Of the armoured gun-boats forming part of the flotilla, three in addition to the turret-vessel *Lutfi-Djelil* were lost by the Turks—namely, the *Saiffee*, destroyed by a torpedo, and the *Podgoritza* and *Scodra*, which fell into Russian hands at the taking of Nicopoli. These two small craft were put into working order to be made use of for attacking the others. Besides the vessels above named, the Turks lost four wooden vessels—the *Sulina*, a regular 60 horse power gun-boat of the old type, designed for the Baltic during the American war, and three river steamers of no particular value as fighting-ships—the first-mentioned by a contact torpedo, and the others by the fire of the Russian batteries.

To return to the Russian offensive operations. Their next move was of a far bolder nature—no less than an attack upon the ironclad squadron lying off Sulina, under the command of Hassan Pasha—the blockading fleet, in fact, designed to keep the Russian steamers shut up in Odessa and Sebastopol. A number of steam-launches, fitted with pole torpedoes, to be exploded by electricity, came down at night from Kilia. Hobart Pasha, who at that time held no special appointment, and was therefore without authority, had pointed out to the admiral in command the exposed position of

the Turkish ships, suggesting, as a defence against torpedo attacks, a cordon of boats with ropes or small chains between; but, as usual, the advice was not followed, the Turks contenting themselves with keeping a good look-out on board of each ship, and having a guard-boat or so rowing round. Besides this, a certain amount of signalling with flashing lights, which preceded the attack, aroused the attention of the Turks, so that they were found on the alert. All the men were at their quarters, the guns loaded and run out, and the ships were engaged in slipping their cables when the enemy's boats came up. The *Idjlalieh*, an ironclad corvette, was the ship singled out by Lieutenant Poutshakine, who led the attack; and had he been ably seconded by the other boats, in all probability that ship would have been destroyed. He successfully brought his little craft under the bows; but his torpedo "got foul" either of the spur or the cable, and so exploded without effecting any injury to the enemy's vessel. The water thrown up probably swamped his boat, though she was supposed to have been sunk by the Turkish fire. She had, however, advanced too close to the *Idjlalieh* for that vessel's guns to have produced any such effect, for the gunports of a man-of-war allow of but very little depression, and the Turkish man-of-war undoubtedly escaped more by accident than by good management or a carefully planned defence. The Russian attack should have been more concentrated; it failed, and the Turks have, therefore, every right to claim the victory. In the meantime the Russians had been fitting up several swift merchant steamers and the fast-steaming yachts of the emperor; and shortly after this the Turks were much disgusted at hearing of the destruction of several of their collier-brigs; but it did not occur to them, apparently, that it might be worth while trying to prevent it.

This was a game the Russians could well play, having such secure places for retreat as Sebastopol, Odessa, Balaklava, and Kertch. The run from any one of those ports to the Turkish coast is very short, so that it is not surprising that they managed to avoid capture. No real blockade of the Russian ports was ever instituted, so that there was nothing to prevent their free egress or ingress; and the only wonder is that the raids were not more frequent. So slightly were the regulations with regard to blockade maintained, that Greek ships arrived at Constantinople with corn from the Russian ports. The Russian cruisers were specially well fitted out for their work. Painted an "invisible" grey, lying low in the water, with nothing but pole-masts visible above the deck, and burning smokeless coal, the lumbering Turkish ironclads had not the smallest chance against them in the game of "hare and hounds." The latter could be seen miles off, their approach betrayed by the dense cloud of black smoke given out by the Heraclea coals; and thus the light-heeled enemy, by a change of course, always managed to avoid a rencontre. Throughout the war the Russians made no use of their Popoffkas. They were kept well within the harbour of Odessa; for as fighting-ships they have proved a complete failure. The Russian navy had not made the progress that was expected, and had really no very efficient sea-going men-of-war. The officers and seamen of the Black Sea fleet, however, did great service in the way of torpedoes and individual exploits of considerable daring. Thus the encounter between the *Vesta* and the *Fethi Bulend*, which occurred on the 22nd of July, 1877, was a very spirited contest between an unarmoured vessel and an ironclad, and the Russians deserve great credit for having thought of escaping in any other manner than by steaming away at the highest rate of speed, the *Vesta* having kept up a running fight before a stern chase for several hours. The Russian torpedo attack at Soukhum-Kalé was aimed at the *Arsari Shefket*, an ironclad corvette which was lying on guard at that place, towards the end of the evacuation. The Russian steamer *Constantine*, which was specially fitted up for torpedo work, brought down some four torpedo launches, and sent them in on the night of the 24th of August, 1877, when the eclipse of the moon seemed to offer special advantages in the obscurity which naturally ensued. The attempt to destroy the corvette was foiled in a great measure by the guard-boats, as any one of the launches got close to her, and the torpedo being fired at a distance from the ship's side, produced no other effect than throwing a quantity of water upon her decks. The Russians, however, managed to make good their retreat, and retired under the impression that the *Arsari Shefket* was done for, the torpedo having, as they imagined, blown such a hole in her bottom as would send her speedily below.

A very skilfully-planned attack against

the Sulina squadron only resulted in the destruction of a small wooden gun-boat. The attack was of a twofold nature—the enemy were to be lured over ground previously prepared with contact mines; or, failing this, the ironclads were to be sunk or driven out of the harbour by mortar-firing, or guns pointed with extreme elevation. The Russian flotilla safely passed Sulina, and entering the St. George's branch (which, with their usual want of foresight, the Turks had neglected to close), proceeded leisurely to Tuldsha, and from thence descended the Sulina river, seeking for torpedoes as they came. Stopping at the sixth mile, securely hidden from view by a bend of the river and the tall reeds of the neighbouring swamps, the torpedo lighters were sent ahead during the night to lay the mines, which was most successfully done, though the Turks poured in a hot fire. The guns of the latter, however, did not range more than 3,500 yards, so that their ammunition was only thrown away to no purpose.

The next morning the *Sulina* was sent out by the Turks beyond the protecting chains to assist the little *Cartal* tug-boat, which had previously gone up to reconnoitre. From the latter having safely passed the suspected ground, the Turks seem to have thought that the *Sulina* might do the same with impunity, not taking into consideration the difference in their draught of water. The consequence was that the *Sulina* struck upon a torpedo, and was instantly destroyed. The Russian contact torpedoes, used on this occasion, show to what perfection the art of submarine mining is now being brought. They combined in their construction both the elements of safety in placing them, and the certainty of explosion when struck by a passing body. Small bichromate of potass batteries are placed all round the case, screwed into small cylinders, and each of these are placed in circuit with its regulators, with a fuze inserted amongst the gun-cotton. The whole chain of these electric circuits are not completed until the mine is placed, and every one has retreated to a safe distance, when, the main wires being joined, the affair is ready for action, the batteries not working until the plates are acted upon by the bichromate of potass. The solution of bichromate of potass is placed in a glass tube hermetically sealed, and protected from accidental fracture by a thick lead covering. When a ship or other passing object strikes this arrangement, which projects outside the torpedo case, the glass tube is broken, and the solution coming in contact with the zinc and carbon plates, a current of electricity is immediately generated, and the torpedo explodes. After the destruction of the *Sulina* there was not the slightest chance of getting another vessel to mount the stream, and so the Russians had to fall back upon the other part of their plan, and commence the bombardment. This they did from a safe distance, far beyond the range of the Turkish guns, and from first to last poured in some 200 shells. No great damage was inflicted on the town, and none at all on the shipping. The latter escaped as by a miracle; the shot and shell fell all around, but the two corvettes at the booms were never struck once; though had only one of the shots, fired with so high a trajectory, but fallen upon the deck of an ironclad, it would probably have placed her *hors de combat*, by sending her to the bottom of the river.

The descent on the Abchasian coast, and the attempted raising of the mountain tribes against the Russians, was even less productive of results than the abortive expedition of Omar Pasha during the Crimean war. Beyond somewhat delaying the march of the Russian troops southwards, and causing much misery amongst the inhabitants who rose, the Porte gained nothing at all by the expedition.

Hussein Pasha, the Turkish admiral, did nothing with his ironclads but threaten the coast, cannonading the stations, and landing predatory bodies of Circassians, who burned the villages and devastated the country lying along the shore on an extended scale. Sukhum Kaleh was bombarded and burned to the ground, and several attempts were made to bombard Poti, but without any success. Altogether, the movement was a complete failure; and the only benefit which the Turks derived from their navy was, that it prevented the Russians from despatching stores and reinforcements by sea from Odessa to the Danube. And even this was but a very poor result, and did not hamper the Russians in any way, as they commanded the lines of railway from Russia to the Danube. The only inconvenience they suffered was a slight increase of expenditure.

CHAPTER XXXIV.

THE GREEK QUESTION.

BEFORE entering upon the troubled period ushered in by the San Stefano treaty, some account of the attitude of Greece during the war is necessary for the complete comprehension of the vexed questions to which the Russo-Turkish conflict gave birth.

There was a time, and not so very long ago, when the Hellenic factor in the Eastern Question was the chief factor in that very complicated problem. The Greeks were then synonymous with the Eastern Christians, and from them proceeded all the movements towards emancipation from the Turkish yoke. But in recent years all this has changed. The Slavs emerged from their long obscurity, and thus the Eastern Question was rendered much more complicated than it was before. The Bulgarians and other members of the Slavonic race had discovered that they had a nationality of their own, and began to show political aspirations inconsistent alike with Turkish and with Greek supremacy. Even if they had stood alone their numbers would have made them a very important factor in the problem; but they did not stand alone. They found a powerful ally in Russia, who advocated their cause in order to extend Russian influence, and, if possible, to plant the Russian eagle on the banks of the Bosphorus and the Dardanelles. The Slavonic Question was thereby identified with the question of Russian extension.

The Greeks had not, however, forgotten their own political existence, such as it is. If they had been silent during the commencement of the war, it was not because they had given up their aspirations, and were indifferent to what was taking place in Turkey. Never, perhaps, had they watched with more intense interest the current of daily events. They believed that at last the sick man, who had for centuries been such a burden to them, was really approaching his latter end, and they thought more than ever about his inheritance. But with profound disgust they observed that their claim as heirs was no longer so strong, and so likely to be regarded as it once was. They found that there were no longer Philhellenes in Western Europe, and that this class of enthusiasts had become as extinct as the mammoth and the megatherium, and that if any happened to come forward, they would be powerless anachronisms. The discussions about the possibility of Greek regeneration had given place to the cry—"L'avenir est aux Slaves!" All this was very saddening to the Hellenic heart. "Why," asked the Greeks, "have we been thus abandoned by Western Europe? Have we not proved ourselves able to govern ourselves, and shown ourselves a respectable member of the European family of nations? Our government, we are quite ready to admit, is not all that could be desired. We are cursed by a class of youths and full-grown men who call themselves politicians, and aspire to become Prime Ministers; and as we have not places and money enough to satisfy the aspiration of all these place-hunters, many ministries are overthrown, and the regular administration greatly hampered by personal rivalries and intrigues. Besides this, too, we do not pay our debts. If, therefore, you compare our government and our country with the more advanced nations of Western Europe, you will certainly form a low opinion of us. But such a comparison is grossly unfair. To judge us justly, you should compare us with what we were before our emancipation; and if you do that, you cannot fail to be struck by the enormous progress we have made in half a century. If your memory does not go back so far as that, and if you doubt the written testimony on the subject, you can still make the comparison for yourself by visiting the northern provinces of the kingdom, and then passing into the purely Greek portions of Thessaly and Epirus. What the Greek villages and towns in these two provinces now are, the villages and towns of the kingdom were before the emancipation. Compare, for example, the Piræus with Salonica. The natural position of the two towns is equally good; but what a difference in the history of the two towns during the last fifty years! Fifty years ago the Piræus was a miserable

village; now it is a flourishing town with about twenty manufactories of various kinds, and is every year increasing in prosperity. And what has been the history of Salonica during that period? On a small scale, the history of the Turkish empire in general—that is, gradual, inevitable decay. If it has made some little progress, it has to thank the Greek inhabitants, who, in spite of Turkish misrule and oppression, have to a certain extent improved their condition. If only some serious, conscientious Englishman would go and live for some time in the kingdom of Greece and the Greek provinces of Turkey, and then give the results of his investigations to the world, the British public would have truer notions as to what the Greeks are, and as to what the emancipated Greeks have done. We should then have true Philhellenes—not generous sentimentalists, who loved and admired us because of the heroic deeds and artistic genius of our forefathers, but cool-headed practical men who can appreciate and admire the material, intellectual, and moral progress of a young, struggling nation. We do not ask you to remember Pericles, or Phidias, or Demosthenes, or even the heroic men who, within living memory, fought and died for their country. Forget if you will all our glorious past, and look on us as we are. If you observe closely and accurately what is before you, and compare it with what was fifty years ago, we have no reason to fear your decision."

On these and similar grounds the Greeks asserted that they were being most unjustly neglected. At a moment when the Eastern Question was about to be, at least, temporarily solved, they were hardly spoken of. They did not, however, intend to sit quietly still and be left out in the cold. If there was to be any distribution of the sick man's goods, they were determined to have, if possible, a share. These ideas, industriously propagated by the politicians, naturally caused a good deal of excitement in Greece, and considerable military preparations were made in view of possible contingencies. The Greek argument was, that having taken up arms, Russia would not lay them down till she had humiliated the Turks; and that when she had done that, there would be a congress, or something of the kind, to decide upon the arrangements for the future. In these arrangements the interests of Russia and the Slavs would be first considered. If Greece had taken part in the struggle, her claims would also receive attention; but if she remained quiet, no one would think of giving her anything. Plainly, then, her best policy, it was argued, was to strike a blow at the sick man whilst the life was still in him. But, on the other hand, the striking of this blow, in view of distant prospective advantages, might lead to direct consequences of a very disagreeable kind. The Turkish fleet was still at large, and Hobart Pasha might think it his duty to bombard at once the Piræus, Syra, Patras, and all the other important towns on the sea-coast. Enormous loss could thereby be inflicted on Greece without withdrawing a single regiment from the Danube or Asia Minor.

Thus Greece was animated by two diametrically opposed motives. She would very much have liked to fight, but she perceived clearly the dangers she would expose herself to by entering on the struggle. As might naturally be supposed, the irresponsible part of the Greek public were, for the most part, advocates of decided action. "This is," they said, "a question of life and death, and we must be content to run a certain risk. The risk, however, is not so great as it appears. Surely England would never allow Hobart Pasha to bombard peaceful unfortified towns containing a very large amount of English property. If England will not interfere, we will find means of defending ourselves as our forefathers did in the War of Independence; and if we should be unsuccessful, Europe will certainly not allow Turkey to eat us up altogether." Such were the sentiments of a very large section of the Greek public. On the other hand, the ministry were more peacefully inclined, and strove—or at least professed to strive—to calm the public, who clamoured for an invasion of Thessaly and Epirus, where the Greek population were waiting for the signal to rise and inaugurate a spectacle similar to that in Servia, when Russia helped the insurgents without declaring war against the Porte. The most difficult position of all was that of the king. He wished to preserve peace; but he also knew that if he tried to stem the flood of popular feeling too long, his fate would be that of Otho.

As it was, it was loudly insisted on in Athens and Syra, that if King George desired to retain his crown, he must do something. So far, he had done nothing to

justify the expectations the Greeks had formed from his connexions in London and St. Petersburg. His journey to England raised these hopes for a time, and it was thought that he would come back with some valuable consideration in return for the "loyalty" the Greeks had evinced in their relations with the Porte, and their self-denial in not complicating matters by an intervention in the Turco-Servian conflict. But when he returned empty-handed—when, above all, it was found that the conference had only busied itself with the Slav question, and that this question had even been transferred to the Mediterranean side of the Balkans, then the Greeks began to lose their patience, and discovered that the great friends of the Vikings' son, and the Vikings' son himself, were animated by other interests than those of Greece. They complained that their king was a Dane, their queen a Russian; and that the children of the royal pair were in a fair way of becoming Germans, their education being entrusted to a Prussian—Dr. Lüders. They felt themselves also highly aggrieved that the former secretary of the queen—M. Domboffski—had been replaced by M. Tatiseff, in consequence of an imperial Russian ukase; and obstinately refusing to see that this ukase had reference only to M. Tatiseff's position as a Russian subject and within the Russian empire, they insisted that it was an impertinent interference, and an attempt to extend Russian administration into the Greek kingdom. Thus there gradually arose a party which had its chief seat in that especially revolutionary centre, Syra, which became louder and louder in its demands that King George should really prove himself an Hellene, and not a marionette pulled by Russian or British strings; whilst throughout Greece generally there was a very strong feeling that something must be done.

This state of things was made use of by the two rival ministers, Koumoundouros and Deligeorgis, each in his own fashion. Koumoundouros wished to obtain what Greece claimed by an alliance with Russia and in concert with the Russians. Deligeorgis, on the contrary, wished to attain the same object by arrangement with the Porte. Between these two stood Charilaos Trikoupis, who insisted on a united and frankly-declared national policy, and was strongly opposed to unofficial war, either in a military or a political sense. This programme had the advantage of satisfying the Greeks of all parties, with the exception of the tufthunters and intriguers—a rather numerous race in Greece—who found his Spartan patriotism impregnable against their little plans of personal advancement. Among these three men King George had to choose; and in view of the strong feeling against the Slavs, it was foreseen that his choice would be limited to Deligeorgis or Trikoupis. Deligeorgis was a popular man, and idolised by the educated youth, on account of his wonderful power of oratory. Thus, in popular esteem, both Deligeorgis and Trikoupis held about equal places; but Deligeorgis was a man of more varied resources; and his policy of coming to an arrangement with the Porte regarding Thessaly and Epirus must be read between the lines. For Deligeorgis, the Porte was in this case the Phanar and not the Divan; and it was just possible that the interests of the Greeks of the empire might become, through his exertions, identical with those of the Greeks of the kingdom. The independence of Cis-Balkan Bulgaria would greatly promote such an understanding; but the extension of an independent Bulgaria beyond the Balkans would render it a certainty. The knowledge of this fact was an additional reason for the Russians confining their chief efforts for future territorial acquisitions in Asia Minor. They knew perfectly well, that unless they could manipulate Greece through the agency of Koumoundouros, Germany and England would support Greece; whilst there could be no two opinions in Europe as to whether the Slav or the Greek race is better adapted for the promotion of civilisation and the development of commerce and agriculture at Constantinople and south of the Balkans. On the whole, therefore, it seemed at one time as if Trikoupis's independent national policy had the best chance of success.

But the great impediment to an independent national policy lay in the constitution of Greek society, in the feebleness of the nation, and its exposure to an attack by sea.

When we find that the *employés* and their families form no less than one-twelfth of the population of Greece, we can easily understand that the financial and economic condition of the country must be highly unsatisfactory. Still more serious does the matter appear when we remember that the country was burdened, at the outset of its career, by a debt it could not pay—by a

legacy of passions that formerly found a vent against the Turks, but since then have caused the formation of numberless factions; and, finally, by being saddled with a king of foreign extraction, whose only chance of founding a dynasty depended upon the force of arms, or the consolidation of a constitutional monarchy. Besides all this, there exists the fact, which it is useless to ignore, that the people are over-educated for their means, or possess too much mobility of intellect to be able to devote themselves to manual labour. The mode of life, the climate, permit them to disregard those conditions of existence which the inhabitants of less favoured countries cannot afford to disregard. The consequence is, that though the population of Greece has increased from 710,000 in 1832, to 1,600,000 in 1876, the resources of the country have not been developed in proportion to the powers of this increase. Thus there arose the same cry in Greece that was heard in Dalmatia—more territory and a greater working population.

These sentiments pervade all classes of Greek society. Even the Greek peasant is more ambitious and enterprising than the rest of his kind in other parts of the world. Agriculture is not all the world for him, as it is for the Bulgarian; and, unlike the latter, his whole family is not chained to the soil as the one business of life. The sons and daughters go out to seek their fortunes, and generally succeed in making them. The Greek peasant is, moreover, a clever fellow, and not ill-educated. He takes a keen interest in politics, reads the village newspaper with avidity, and listens with enthusiasm to the history of his country, and the deeds of his ancestors told in stirring song. He is eloquent, too, and can debate excellently over the coffee or raki, or state his case with perfect *sangfroid* to the consul or other authority, when the Bulgarian would hardly be able to utter an intelligible word. The Turkish Greek is, moreover, intensely patriotic; he is proud of free Hellas, and is confident that some day he, too, will be free. He is more luxurious than the Bulgarian, his dress less coarse, his food better served, his house better built, his school better organised, his wife and daughters more refined and better dressed.

In conceding all this, it must also be confessed that the material progress of Greece, since its independence, has been very great; and nowhere is this progress more evident than in the capital, though, as we have seen, it is also noticeable amongst the rural population.

There is enough that is enjoyable in Athens, and far more than the traveller will find in Constantinople. Go out for a walk on a fine evening to the Place de la Concorde, where the band of the king's guard plays in the afternoon; join the crowd of promenaders on foot, on horseback, and in carriages on the fashionable northern avenue to Patissia, past the *cafés*, where hundreds of motley idlers lounge in chairs at round tables cumbering the spacious side-walks; look back to the south, where the stupendous rock of the Acropolis, with its shattered temples and crumbling mediæval walls, sits like a diadem on the brow of this fair Hellenic queen; turn to the west, where the rays of the setting sun dart from the crests of the Ægaleos and the Parnes, gilding on the opposite side the dark masses of the Hymettos and Pentelikon, revealing and relieving their rugged ravines and their bold outlines, which stand out distinctly as if carved in the deepening blue of the sky; walk about, or sit and muse, or listen to the easy chat of those idle groups, and one cannot but half wonder at, half envy that happy vacuity of earnest thought and incapacity of sustained action which make up so large a part of this blessed Eastern existence, yet not the whole of it. For, after looking at Athens, with its 50,000 good-looking, intelligent, sensitive, aspiring people, their schools, museums, and libraries, all improvised, yet all thriving and promising, it is almost impossible to conjure up the cluster of wretched hovels which bore the name of Athens under Ottoman rule fifty or sixty years since. Comparing this little oasis of European civilisation with Volo, or Larissa, or Janina, or any of the hotbeds of Turkish sloth, especially with that horrid Pera-Galata, that sea of deep, fœtid mud, out of which emerge, like islands, the sumptuous palaces of their diplomatic Excellencies, produces the most emphatic evidence of the utter impotence of these same Excellencies to work out any material good, even at their very doors.

But that there are drawbacks to all these good things at Athens, that there is something rotten in this new state of Greece, no one will deny. There are some incurable and

some not easily mended faults in the soil and climate; for the mild and sweet early days of May are soon over, and before the end of the month the torrid heat sets in, and the glare of the sun in the injudiciously broad thoroughfares, with the reflection of the smooth flag-stones and white walls, is dazzling and blinding; and the dust rises in huge dense clouds at every breath of wind, and chokes you at every step if you venture out of doors, and creeps through the windows that you dare not open, and covers the table you are writing at and the very bed you sleep on. There is no such scourge in the world as Athenian chalk-dust; for all the new streets are macadamized, and for one house that is rising from the ground the foundations of a score of others are laid; and in spite of political anxiety and financial distress, the chipping of the stonemason's chisel is heard at all hours in every quarter, whilst the wind sweeps through the rubbish-heaps in the open spaces, and Athens has scarcely one drop of water to slake the thirst of her burning streets and squares.

This is all owing to the centuries of human unthrift and stolidity which has made of Attica a torrid desert for six or seven months in the year. There was a time, as Sophocles tells us, and as the guide-books translate, when "beautiful fields bloomed, when nightingales sighed and lamented among the groves of Colonus, along its green hedges and walls mantled with dark ivy." Days are mentioned when the Cephisus and Ilissus were streams of water and not beds of arid stones as they are now; when people could talk of "sacred foliage teeming with fruits in shady coolness, nourished by gentle breezes, untouched by storms." The ravages of man have done away with all that. Men still living in Athens remember the fires with which the last strips of forest in the glens of Hymettus and Pentelicus gleamed round Athens night after night, as they do now incessantly in the gorges of the mountains of Albania, visible from Corfu. The savage cultivators of the soil in these regions burn their woods to fertilise the fields with their ashes. By the destruction of trees of many ages' growth they insure a paltry crop for one season. But the experiment cannot be twice made; the havoc is now complete; the mischief can no further go. With every trace of vegetation, every vestige of moisture vanishes early in the spring from the Attic land, and before the end of May all is parched, burnt, pulverised, bare, scorched, and desolate. No one plants trees; no trees planted would have any chance of living; and where nature, by the inexhaustible strength of her recuperative energies, puts forth here a bud, there a bulb, where a chance seed dropped from a bird, or wafted by the wind, might be the means of again covering the land with trees and blessing it with new verdure and moisture, the goat comes browsing, crops up, tears up, the very rock to which the roots cling with unavailing vital instinct. Nowhere in the world, perhaps, is the proportion of goats to all other cattle so great as it is in Athens and the surrounding territory. The niggardly boor of Attica cherishes a quadruped that gives milk and eats nothing—eats, that is to say, what costs its owner nothing, but what is in reality "the heart of the land." This improvidence, let it be repeated, is not peculiar to Athens or to other parts of Southern Greece. But no country has sinned on this score more grievously than Attica, no town more bitterly rues the consequences than Athens, and no country or town, to all appearance, is less alive to the enormity of the evil, or less earnestly inclined or determined to devise a remedy. That woods could be planted everywhere around Athens, that the mountains, if protected from the goats, would again teem with vegetation up to the highest rocks, and that verdure and moisture would again be as plentiful as they were in the days of the great tragedian, no one will doubt who sees in how few years the king's garden and other plantations have sprung up to the greatest luxuriance. And barren as is the country, by the fault of the governing classes more than by the fault of the people, just as barren are its politics—no doubt, in a great measure, owing to the relations of Greece with and towards the Greek provinces of Turkey. Besides the associations, or clubs, to which we have alluded on an earlier page (p. 11) there was a crowd of newspapers expounding the views of these clubs and the various parties.

But, in spite of all the intrigues of the societies, the exertions of the politicians—in spite of the popular clamour, and notwithstanding the noisy patriotism of Leonidas

Bulgaris—or perhaps in consequence of all this, on the principle that too many cooks spoil the broth, the long-expected "action" did not go beyond the ostentatious concentration of Greek troops on the frontier; whilst Leonidas Bulgaris, styling himself president of the insurrectional *comité*, issued a proclamation, calling upon the people of Thessaly, Macedonia, and Epirus, to take up arms. Photiades Bey made energetic representations to the Greek ministers on the subject, and called upon them to arrest Bulgaris, but without success, the ministers alleging that they could not take such a measure without endangering their existence as a Cabinet.

Meantime the ministers exhibited much activity in their diplomatic negotiations with England, Turkey, and Roumania; and towards the end of July, 1877, Trikoupis had a long conversation with the English ambassador, Mr. Stuart, who assured him that the interests of the Greeks would not be lost sight of by England. This has been interpreted as though Mr. Stuart was alluding to the interests of the Greek government in Athens. Such was not the case. The conversation referred only to the interests of the Greek subjects of the Porte, in view of any extension of the privileges of the Slav subjects which might be prejudicial to them. In the same sense must the notes be considered which the Greek Cabinet addressed to its agents at foreign Courts. This attitude was rather at variance with the expectations entertained by the Greeks from the Cabinet of Compromise, at the head of which was Canaris, and, whose *raison d'être* lay in its being supposed to represent the universal national wish; and it was also at variance with the military preparations that were rapidly approaching completion. At the same time, the excitement throughout Greece became so great, that it was feared that if the Cabinet did not abandon its temporising policy, it would be forced to resign, and make way for a more resolute one. The national enthusiasm exhibited itself in considerable contributions of men, arms, and money; and the men of the first extraordinary reserve were welcomed everywhere by processions of the inhabitants, and bands of music, and the customary festal virgins. They were all at their posts even before the appointed time, so that the increase of the army to 27,000 men was now an established fact by the beginning of August, 1877.

And yet matters still remained in the same undecided state. The fact was, that the Greek government were suffering from a plethora of advice. It was an open secret that they had been formally assured by the German government of its fullest sympathy; but this assurance was somewhat diminished by the proviso, that such sympathy could not practically extend beyond the limits imposed by Great Britain. But as to what these limits were, the Greek government had not been able to ascertain. In no case had the promises of the British ministers gone beyond the general assurance that the interests of Greece should not suffer in favour of any other nationality subject to the Porte; but at the same time it was pointed out, that any premature action would forfeit the good wishes of the government of Great Britain, and prevent any interference with such maritime dispositions as the Turkish government might see fit to adopt. This language made a decided impression upon some members of the Athens Cabinet, who found themselves opposed by the more independent members, whose idea was in favour of co-operation with Russia—or, to use the more exact phrase—of parallel action with Russia, independent of Russian control, but still *en rapport* with St. Petersburg. Canaris, however, was opposed to this, as indeed to any war at all, until the success of the Russian arms appeared assured beyond all doubt. So, too, was the Phanar opposed to any action; and when certain occurrences in the Russian monastery of Pantaleimon, on Mount Athos, in connexion with intrigues in the Bulgarian monasteries there, seemed to point to an attempt to Slavonicise the peninsula, the *Phare du Bosphore* called upon the Porte to vindicate its rights, and banish the Russian and Bulgarian monks. The Porte would have consented, but Prince Reuss protested against the measure, and it was not carried out. Again, the Phanar rendered important services to Turkey during the war. Thus, the banking firm Sarifi advanced £300,000 to the Porte, in addition to former sums advanced by the same firm, and by Messrs. Negroponte and Stefanovitch. The Phanar also had the chief contracts for the supplies of the Turkish army. There was thus a great division of interest between the Greeks of the kingdom and those of Constantinople, and part of the Greeks of London and Vienna. But the people of Greece felt very strongly that the

jackal's part was not a worthy one to play, especially not for such a nation as the Greek, and had besides a shrewd idea that it was a dangerous game to play. It is true, the Greek Cabinet was prepared to enter into an alliance with Russia on certain conditions. These conditions were, that Russia should formally engage to renounce for herself and the Slavs any claim to the country south of the Balkans; that the occupation of towns largely inhabited by Greeks, such as Adrianople, should be temporary only; and thirdly, that Russia should sell her ironclad fleet to Greece in order to secure the services of the 30,000 sailors Greece was prepared to furnish! The little kingdom had thus no small idea of its importance. But, extravagant as these demands may appear, it might have been wise on the part of the Russians to have acceded to them. Greece must not be measured by the Morea and the Peloponnesus. There is a larger Greece—the Greece that has kept the Porte on its legs for many centuries, and which was capable of keeping it on its legs still for many a year to come.

However, the result of all the commotion was, that the government took no action itself, and regarded the exertions of Bulgaris and the clubs to raise an insurrection in Thessaly with a lenient eye, the ministers assuring the Turks and the foreign governments that the movement was not dangerous, and was of great use as a safety-valve, and eminently calculated to save troubles and complications between the government of Greece and its hard-beset neighbour.

This was the state of affairs immediately preceding the treaty of San Stefano. The Greek government was waiting to pick up whatever crumbs might be dropped by the great powers, and the Greek people were occupied in watching the course of the insurrection, and finding a vent for their superabundant excitement in denunciation of the Turks, England, Russia, France, Germany, and the rest of the world in general—not even forgetting Italy, whose example of acquiring provinces without fighting for them, or even by a series of defeats, they were all so eager and ready to follow.

CHAPTER XXXV.

THE TREATY OF SAN STEFANO BEFORE EUROPE.

ALTHOUGH the treaty of San Stefano was signed on March 3rd, it was not officially communicated to the British government until March 20th. Probably this was due, in some measure, to the Russian government desiring to allow some of the excitement it caused to subside before its official presentation, but chiefly in order to gain time and allow the military authorities to take the strategic steps also permitted by the treaty before any foreign government could interpose on the basis officially provided by the treaty itself.

The wisest thing about the whole treaty was its qualification, "preliminary." This qualification was wise for two reasons. First of all, because it opened the way for a peaceable abrogation of the articles, which England for one—and probably the whole of Europe—would declare inadmissible and contrary to previous treaty obligations. Secondly, it was wise from a Russian point of view, because it also opened the way to a period of anxiety, indecision, and tension which could not but act more or less unfavourably to trade and commerce generally, and England's commerce especially. By this means it was hoped that dissatisfaction with the Beaconsfield ministry would be engendered in England, and pave the way to the accession of a Liberal Cabinet, with which the Russian government imagined it could more easily deal.

In fact, the San Stefano treaty inaugurated a policy which was consistently carried on all through the year 1878. The *mot d'ordre* of this policy was harassment, and it extended from the Adriatic to the Afghanistan frontier of India.

But, in spite of the damage done to business—in spite of the indubitable desire of the British people for peace—even at a

moderate sacrifice—it was acknowledged on all sides that the treaty of San Stefano could not be allowed to stand. This opinion Europe unanimously expressed as soon as the text of the treaty had been published.

But even some time before its publication, the ministers and ambassadors of the different powers were made aware of the general character of the document; and, in reply to their objections, the Russian diplomatists replied that really it did not much matter what was signed between Russia and Turkey, as the treaty would be laid before the powers, and have to receive their sanction before it became a definite agreement with full international force.

As soon, therefore, as the preliminary arrangements for an armistice—to be followed at once by negotiations for peace—had been signed, Count Andrassy, the Austrian Minister for Foreign Affairs, addressed a despatch, on February 5th, to all the great powers, in which he stated that Austria had always reserved her right to exercise her share of influence over the definitive regulation of the conditions of the future peace. The imperial government of Russia, to which he had communicated this point of view, had fully appreciated it; and, as preliminaries of peace had just been signed between Russia and Turkey, the moment appeared to have come to establish the agreement of Europe on the modifications which it may become necessary to introduce into the treaties of 1856 and 1871. The most suitable means to bring about this agreement appeared to the Austrian government to be the assembly of a conference of the powers signatory of the treaty of Paris of 1856, and of the protocol of London of 1871. Count Andrassy therefore begged to invite the Cabinet of St. James's to be good enough to join in a conference of the powers signatory of the above-mentioned international acts, and hoped there would not be any objection to the assembling of the conference at Vienna. As soon as the acceptance in principle of this invitation by the Cabinets invited should be signified, he would hasten to propose to them the manner and the date of meeting.

To this despatch Lord Derby replied on February 7th, accepting the Austrian invitation, which was also accepted by the other powers.

Meantime, however, between the signature of the armistice and the signature of the San Stefano treaty, a better knowledge of the probable character of that instrument had been acquired, and the chief result of this better knowledge, as far as England was concerned, was the demand by the Beaconsfield ministry for a credit of £6,000,000, in order, should the conference proposed meet at Vienna, to be prepared for extreme measures if no agreement were arrived at. This credit parliament voted by a large majority, especially as the public were in an intense state of excitement at the critical state of affairs. For, notwithstanding the ratification of peace at St. Petersburg and the re-establishment of the Russian embassy and consulate at Constantinople, the relations between England and Russia, and the mystery which overhung the precise conditions of peace, made the situation most serious. The evacuation by the Turkish troops of various points between Buyukdere and Kilios on the Black Sea, and the uncertainty whether the points thus evacuated were or were not to be occupied by Russian troops, of course added to the gravity of the phase of the "Eastern Question" through which the world was passing. Naturally, at such a moment, the most wild and extravagant rumours were circulated, not only in Pera and Stamboul, but also in London and Paris, as to a further advance of the Russians towards Constantinople. There was considerable reason for such apprehensions; for, day by day, the Russians gradually drew nearer to the capital and the shores of the Bosphorus. Between Daoud Pasha and Belgrad, the line occupied by the Russians ran from San Stefano through the villages of Nymphis, Aipas, Kalfa, Ayo Ghiorghi (St. George), and thence on the north-west of the forest of Domonaderé, through Istenia to Boghazkeui, and to the Black Sea coast.

Belgrad itself not only was evacuated, but Kilios also. Kilios is a fortress with forty-four guns, in charge of which but a small number of troops was left. In fact, Demirjikoi, Ferikoi, Sekeriyehkoi, and all the villages where Turkish troops were stationed, were being evacuated as rapidly as possible, and the troops pouring into Stamboul and elsewhere. This evacuation left open to the Russians all the fortresses between Belgrad and Roumelia Pharanaki (Lighthouse), the extreme point on the European side of the entrance to the Bosphorus from the Black Sea. The forts between that point and Buyukdere were — Papas Point, with

eleven guns; Fort Karibjeh, with seventeen guns; Buyuk Liman, where there were a powder magazine and twenty-two guns; Kavak, with batteries containing twenty guns; and Sariyeri, about two miles from Buyukdere, which contained a battery of eight 24-pounders.

Thus, at that moment, before the Turks had had time to recover from the blows they had received, or to secure whatever positions remained to them before the capital, the Russians could easily have seized Constantinople, and have obtained the control—for a time at least—of the Bosphorus.

Against such a step the British fleet was practically powerless to interfere for a time. Admiral Hornby would have had quite enough to do to hold the Dardanelles and assist the Turks to hold the lines of Bulair and Gallipoli. At the same time, however, there was never any fear amongst the military authorities in London that the Russians would take such a step. They knew perfectly well that Russia was playing a game of brag; and there is little doubt, too, that, as far as immediate contingencies were concerned, the British government was playing the same game.

Still, even a game of brag costs money. It cost the Russians a large sum of money daily on account of their army; and it cost England pretty nearly the whole of the £6,000,000 before the game was played out. It may not be very dignified to acknowledge this; but facts are facts, and, as there was considerable danger of Russia obtaining what she wanted from the Turks by bullying them, and bragging, it was wiser for the British ministry to talk still bigger, and play a still bigger game of harmless, though expensive brag, than to plunge into the miseries of war. At the same time the game was a safe one to play; for should brag have been insufficient, there were the means at hand to render it grim earnest indeed. Still, we repeat it, we have the very best authority for saying, that at no period after the capture of Adrianople, and the entry of the British fleet into the Dardanelles and the Sea of Marmora, was there the slightest apprehension at the War Office that the Russians would occupy Constantinople. All the excitement and tension following the signature of the treaty of San Stefano, up to its modification by the Berlin congress, might have been spared had there but been a rational system for conducting foreign affairs by open discussion and parliamentary means, instead of in a hole-and-corner fashion round a dozen green tables.

But, in addition to these matters of fact which precluded the occupation of Constantinople, there were good military reasons at that moment—*i.e.*, as long as the British fleet was in the Sea of Marmora, and had its communications open through the Dardanelles, as well as the central of the Asiatic side of the Bosphorus.

A reference to the sketch of Constantinople will show that, as long as the sea and Scutari were held by the Turks and English, the retention of Constantinople by the Russians, even if they succeeded in occupying the whole of the European coast of the Dardanelles, would have been rendered impossible except at an immense expenditure of blood and treasure, as the city was open to bombardment throughout its length from south to north, and east to west, by the fleet and by batteries on the Asiatic coast, and at Scutari. For this reason the Russians never dreamt of occupying Constantinople itself. What they contemplated was the encircling of the city with a series of strong earthworks along the Tchataldja lines, and thus prevent any communication with the interior. This plan would have entailed much more trouble and loss of life on the Turks and English, in case of a war, than any other, as it would have obliged them to fight their way by land, and disembark troops more or less in the face of the enemy. In two words, Constantinople was never in any danger of falling into the hands of the Russians. But that this was the case, was due only to the foresight and determination of Lord Beaconsfield, who insisted upon sending the fleet before the very walls of the city, and thus created the situation which prevented the Russians from capturing the city. Had he not sent the fleet, there is very little doubt but that not only Constantinople would have been seized, but Scutari and the Asiatic side of the Bosphorus as well. And then England and Europe might have protested as long as they chose, or have commenced hostile operations against the Russians under the most unfavourable circumstances.

But though Constantinople itself may not have been in any immediate danger, there was, nevertheless, considerable danger of war breaking out for many reasons—

reasons it is not necessary to enter into here, but of which one—the deciding one in fact—was the attitude taken up by Russia in Central Asia against India and British rule and influence on the north-western frontiers of the Punjaub and Scinde and Cashmere.

Already, during the summer of 1876, secret Russian agents had been sent to Cabul to secure the favour of the Emir Shere Ali, the ruler of Afghanistan; and this, coupled with other indications of a similar character, pointed clearly to an intention, on the part of Russia, to prepare a course of agitation in India and the outlying principalities, similar to that in Servia which preceded the Russo-Turkish war.

Against this state of affairs it was necessary to take precautions; and as there is no military organisation in England like those of the other continental powers, which permits the mobilisation of a large army at a few days' notice, it was necessary to take steps long before any immediate cause for action arose.

Thus, for divers reasons of a military and strategic, as well as a political character, it was determined not only to call out the reserves, but also to despatch a body of Indian troops to the Mediterranean. On this determination being arrived at by the rest of the cabinet, Lord Derby resigned his post as Foreign Secretary, and was succeeded by the Marquis of Salisbury.

This defection of Lord Derby's was quite in accordance with what we have already said of his character long before he so fully justified that opinion by his subsequent conduct. At the same time it caused no slight embarrassment to the ministers, for it had been intended to land the Indian troops at Alexandretta; and there is good reason to believe that Lord Derby threatened to divulge this plan if persisted in. In consequence thereof, it was decided—weakly decided in our opinion—to land them at Malta instead. The necessary orders to prepare for this step were sent to India. These orders were followed up by the order calling out the reserves; this order Lord Derby stating to have been one, though not the chief of his reasons, for resigning.

Now all these steps placed England on the verge of the boundary which separates peace from war; and it was necessary, not only to state clearly what would be the cause of such war, but also to justify the steps taken. With the first object, Lord Salisbury addressed a despatch to all the English embassies abroad; and with the second, Lord Beaconsfield moved an humble address to the Queen, thanking her for the message of April 1st, calling out the reserves in order to afford government an opportunity to justify its action and take the opinion of parliament on the subject.

The following is the despatch which Lord Salisbury addressed to Lord Loftus and the other ambassadors:—

"Foreign Office, April 1, 1878.

"My Lord,—Sir,—I have received the Queen's commands to request your Excellency to explain to the government to which you are accredited the course which her majesty's government have thought it their duty to pursue in reference to the preliminaries of peace concluded between the Ottoman and Russian governments, and to the European congress which it has been proposed to hold for the examination of that treaty. On the 14th January, in view of the reports which had reached her majesty's government as to the negotiations for peace which were about to be opened between the Russian government and the Porte, and in order to avoid any possible misconception, her majesty's government instructed Lord A. Loftus to state to Prince Gortschakoff that, in the opinion of her majesty's government, any treaty concluded between the government of Russia and the Porte affecting the treaties of 1856 and 1871 must be an European treaty, and would not be valid without the assent of the powers who were parties to those treaties. On the 25th January the Russian government replied by the assurance that they did not intend to settle by themselves ('isolément') European questions having reference to the peace which is to be made ('se rattachant à la paix').

"Her majesty's government, having learnt that the bases of peace had been arranged between the Turkish and Russian delegates at Kesanlik, instructed Lord A. Loftus, on the 29th January, to state to the Russian government that her majesty's government, while recognising any arrangements made by the Russian and Turkish delegates at Kezanlik for the conclusion of an armistice, and for the settlement of bases of peace as binding between the two belligerents, declared that in so far as those arrangements were calculated to modify European treaties and to affect general and British

interests, her majesty's government were unable to recognise in them any validity unless they were made the subject of a formal agreement among the parties to the treaty of Paris. On the 30th of January Lord A. Loftus communicated this declaration to Prince Gortschakoff, and his highness replied that to effect an armistice certain bases of peace were necessary, but they were only to be considered as preliminaries and not definitive as regarded Europe; and stated categorically that questions bearing on European interests would be concerted with European powers, and that he had given her majesty's government clear and positive assurances to this effect. On the 4th of February the Austrian ambassador communicated a telegram inviting her majesty's government to a conference at Vienna, and her majesty's government at once accepted the proposal. On the 5th of February his Excellency addressed a formal invitation to Lord Derby, stating that—'L'Autriche-Hongrie, en sa qualité de puissance signataire des actes internationaux qui ont eu pour objet de régler le système politique en Orient, a toujours réservé, en présence de la guerre actuelle, sa part d'influence sur le reglement définitif des conditions de la paix future. Le gouvernement impérial de la Russie, auquel nous avons fait part de ce point de vue, l'a pleinement appréciée. Aujourd'hui que les préliminaires de paix viennent d'être signés entre la Russie et la Turquie le moment nous semble venu d'établir l'accord de l'Europe sur les modifications qu'il deviendrait nécessaire d'apporter aux traités sus mentionnés. Le mode le plus apte à amener cette entente nous paraît être la réunion d'une conférence des puissances signataires du traité de Paris 1856 et du protocole de Londres de 1871.' Austria, as a signatory of the treaties referring to the East, has always reserved its share of influence in regulating the future treaty of peace. This has been acknowledged by the Russian government; and thus the Austrian government, now that the preliminaries of peace have been signed, proposes a conference of the powers who signed the treaty of 1856. On the 9th instant the Austrian government proposed, that instead of the conference at Baden-Baden, as previously contemplated, a congress should be assembled at Berlin. Her majesty's government replied that they had no objection to this change, but that they considered 'that it would be desirable to have it understood, in the first place, that all questions dealt with in the treaty of peace between Russia and Turkey should be considered as subject to be discussed in the congress; and that no alteration in the condition of things previously established by treaty should be acknowledged as valid until it has received the assent of the powers.' On the 12th March Count Beust was told that her majesty's government must be perfectly clear on the points mentioned in the letter to him of the 9th instant, before they could definitively agree to go into congress. On the 13th, her majesty's government explained further the first condition:—'That they must distinctly understand, before they can enter into congress, that every article in the treaty between Russia and Turkey will be placed before the congress, not necessarily for acceptance, but in order that it may be considered what articles require acceptance or concurrence by the several powers, and what do not.' On the 14th the Russian ambassador communicated the following telegram from Prince Gortschakoff:—'Toutes les grandes puissances savent déjà que le texte complet du traité préliminaire de paix avec la Porte leur sera communiqué dès que les ratifications auront été èchangées, ce qui ne saurait tarder, Il sera simultanément publié ici. Nous n'avons rien à cacher.' All the great powers know that the complete text of the preliminary treaty will be communicated to them as soon as the ratifications have been exchanged. It will be published here at the same time. We have nothing to conceal. On the 17th Lord A. Loftus reported that he had received the following memorandum from Prince Gortschakoff:—'In reply to communication made by Lord A. Loftus of the despatch by which Lord Derby has replied to the proposal of Count Beust relating to the meeting of the congress at Berlin, I have the honour to repeat the assurance which Count Schouvaloff has been already charged to give to her majesty's government—viz., that the preliminary treaty of peace concluded between Russia and Turkey shall be textually communicated to the great powers before the meeting of the congress, and that in the congress itself each power will have the full liberty of its appreciations and of its action.' In a despatch received on the 18th, Lord A. Loftus stated that Prince Gortschakoff had said to him that of course he could not impose

silence on any member of the congress, but he could only accept a discussion on those portions of the treaty which affected European interests. Lord Derby having asked Count Schouvaloff for a reply from Prince Gortschakoff, his Excellency informed him, on the 19th, that he was 'charged to represent to her majesty's government that the treaty of peace concluded between Russia and Turkey—the only one which existed, for there was no secret engagement—would be communicated to the government of the Queen in its entirety, and long before ('*bien avant*') the assembling of the congress. The government of the Queen, in like manner as the other great powers, reserved to themselves at the congress their full liberty of appreciation and action. This same liberty which she did not dispute to others, Russia claimed for herself. Now, it would be to restrict her, if, alone among all the powers, Russia contracted a preliminary engagement.' On the 21st, Lord Derby replied that her majesty's government could not recede from the position already clearly defined by them, that they must distinctly understand, before they could enter into congress, that every article in the treaty between Russia and Turkey would be placed before the congress, not necessarily for acceptance, but in order that it might be considered what articles required acceptance or concurrence by the other powers, and what did not.

"Her majesty's government were unable to accept the view now put forward by Prince Gortschakoff, that the freedom of opinion and action in congress of Russia, more than of any other power, would be restricted by this preliminary understanding. Her majesty's government therefore desired to ask whether the government of Russia were willing that the communication of the treaty *en entier* to the various powers should be treated as a placing of the treaty before the congress, in order that the whole treaty, in its relation to existing treaties, might be examined and considered by the congress. On the 26th Count Schouvaloff wrote to Lord Derby that the imperial cabinet deemed it its duty to adhere to the declaration which he was ordered to make to the government of the Queen, and which was stated in the letter which he had the honour to address to him, dated the 19th of March. As different interpretations had been given to the 'liberty of appreciation and action' which Russia thought it right to reserve to herself at the congress, the imperial cabinet defined the meaning of the term in the following manner:—'*It leaves to the other powers the liberty of raising such questions at the congress as they might think it fit to discuss, and reserves to itself the liberty of accepting or not accepting the discussion of these questions.*'

"Her majesty's government deeply regret the decision which the Russian government have thus announced. How far the stipulations of the treaty of San Stefano would commend themselves as expedient to the judgment of the European powers, it is not at present possible to decide. But even if a considerable portion of them were such as were likely to be approved, the reservation of a right, at discretion, to refuse to accept a discussion of them in a congress of the powers, would not on that account be the less open to the most serious objection. An inspection of the treaty will sufficiently show that her majesty's government could not, in a European congress, accept any partial or fragmentary examination of its provisions. Every material stipulation which it contains involves a departure from the treaty of 1856. By the declaration annexed to the first protocol of the conference held in London in 1871, the plenipotentiaries of the great powers, including Russia, recognised 'that it is an essential principle of the law of nations that no power can liberate itself from the engagements of a treaty, nor modify the stipulations thereof, unless with the consent of the contracting powers by means of an amicable arrangement.' It is impossible for her majesty's government, without violating the spirit of this declaration, to acquiesce in the withdrawal from the cognizance of the powers of articles in the new treaty which are modifications of existing treaty engagements, and inconsistent with them. The general nature of the treaty, and the combined effect of its several stipulations upon the interests of the signatory powers, furnish another and conclusive reason against the separate discussion of any one portion of those stipulations apart from the rest. The most important consequences to which the treaty practically leads are those which result from its action as a whole upon the nations of south-eastern Europe. By the articles erecting the new Bulgaria, a strong Slav State will be created under the auspices and control of Russia, possessing important harbours upon the shores of the Black Sea and the

Archipelago, and conferring upon that power a preponderating influence over both political and commercial relations in those seas. It will be so constituted as to merge in the dominant Slav majority a considerable mass of population which is Greek in race and sympathy, and which views with alarm the prospect of absorption into a community alien to it not only in nationality, but in political tendency and in religious allegiance, The provisions by which this new State is to be subjected to a ruler whom Russia will practically choose, its administration framed by a Russian commissary, and the first working of its institutions commenced under the control of a Russian army, sufficiently indicate the political system of which in future it is to form a part. Stipulations are added which will extend this influence even beyond the boundaries of the new Bulgaria. The provision, in itself highly commendable, of improved institutions for the population of Thessaly and Epirus, is accompanied by a condition that the law by which they are to be secured shall be framed under the supervision of the Russian government. It is followed by engagements for the protection of members of the Russian church, which are certainly not more limited in their scope than those articles of the treaty of Kainardji upon which the claims were founded which were abrogated in 1856. Such stipulations cannot be viewed with satisfaction either by the government of Greece or by the powers to whom all parts of the Ottoman empire are a matter of common interest. The general effect of this portion of the treaty will be to increase the power of the Russian empire in the countries and on the shores where a Greek population predominates, not only to the prejudice of that nation, but also of every country having interests in the east of the Mediterranean Sea. The territorial severance from Constantinople of the Greek, Albanian, and Slavonic provinces, which are still left under the government of the Porte, will cause their administration to be attended with constant difficulty and even embarrassment; and will not only deprive the Porte of the political strength which might have arisen from their possession, but will expose the inhabitants to a serious risk of anarchy. By the other portions of the treaty analogous results are arrived at upon other frontiers of the Ottoman empire. The compulsory alienation of Bessarabia from Roumania, the extension of Bulgaria to the shores of the Black Sea, which are principally inhabited by Mussulmans and Greeks, and the acquisition of the important harbour of Batoum, will make the will of the Russian government dominant over all the vicinity of the Black Sea. The acquisition of the strongholds of Armenia will place the population of that province under the immediate influence of the power which holds them; while the extensive European trade which now passes from Trebizond to Persia will, in consequence of the cessions in Kurdistan, be liable to be arrested at the pleasure of the Russian government by the prohibitory barriers of their commercial system. Provision is made for an indemnity, of which the amount is obviously beyond the means of Turkey to discharge, even if the fact be left out of account that any surplus of its revenues is already hypothecated to other creditors. The mode of payment of this indemnity is left, in vague language, to ulterior negotiations between Russia and the Porte. Payment may be demanded immediately, or it may be left as an unredeemed and unredeemable obligation to weigh down the independence of the Porte for many years. Its discharge may be commuted into a yet larger cession of territory, or it may take the form of special engagements subordinating in all things the policy of Turkey to that of Russia. It is impossible not to recognise in this provision an instrument of formidable efficacy for the coercion of the Ottoman government, if the necessity for employing it should arise.

"Objections may be urged individually against these various stipulations; and arguments, on the other hand, may possibly be advanced to show that they are not individually inconsistent with the attainment of the lasting peace and stability which it is the highest object of all present negotiations to establish in the provinces of European and Asiatic Turkey. But their separate and individual operation, whether defensible or not, is not that which should engage the most earnest attention of the signatory powers. Their combined effect, in addition to the results upon the Greek population and upon the balance of maritime power which have been already pointed out, is to depress, almost to the point of entire subjection, the political independence of the government of Constantinople. The formal jurisdiction of that government extends over geographical positions which

must under all circumstances be of the deepest interest to Great Britain. It is in the power of the Ottoman government to close or to open the Straits which form the natural highway of nations between the Ægean Sea and the Euxine. Its dominion is recognised at the head of the Persian Gulf, on the shores of the Levant, and in the immediate neighbourhood of the Suez Canal. It cannot be otherwise than a matter of extreme solicitude to this country that the government to which this jurisdiction belongs should be so closely pressed by the political outposts of a greatly superior power, that its independent action, and even existence, is almost impossible. These results arise, not so much from the language of any single article in the treaty, as from the operation of the instrument as a whole. A discussion limited to articles selected by one power in the congress would be an illusory remedy for the dangers to English interests and to the permanent peace of Europe which would result from the state of things which the treaty proposes to establish. The object of her majesty's government at the Constantinople conference was to give effect to the policy of reforming Turkey under the Ottoman government, removing well-grounded grievances, and thus preserving the empire until the time when it might be able to dispense with protective guarantees. It was obvious that this could only be brought about by rendering the different populations so far contented with their position as to inspire them with a spirit of patriotism, and make them ready to defend the Ottoman empire as loyal subjects of the Sultan. This policy was frustrated by the unfortunate resistance of the Ottoman government itself, and, under the altered circumstances of the present time, the same result cannot be attained to the same extent by the same means. Large changes may, and no doubt will, be requisite in the treaties by which south-eastern Europe has hitherto been ruled. But good government, assured peace, and freedom for populations to whom those blessings have been strange, are still the objects which this country earnestly desires to secure. In requiring a full consideration of the general interests which the new arrangements threaten to affect, her majesty's government believe that they are taking the surest means of securing those objects. They would willingly have entered a congress in which the stipulations in question could have been examined as a whole in their relation to existing treaties, to the acknowledged rights of Great Britain and of other powers, and to the beneficent ends which the united action of Europe has always been directed to secure. But neither the interests which her majesty's government are specially bound to guard, nor the well-being of the regions with which the treaty deals, would be consulted by the assembling of a congress whose deliberations were to be restricted by such reservations as those which have been laid down by Prince Gortschakoff in his most recent communication.

"Your Excellency will read this despatch to the Minister for Foreign Affairs, and give him a copy of it.—I am, &c.,

(Signed) "SALISBURY."

This despatch naturally caused intense excitement in Russia and amongst the Liberal party. It was objected to on the score that it was calculated to lead to war, as it was, more or less, a defiance of Russia, and, moreover, contained no definite proposal, but was confined to criticism.

These objections were true and untrue. The despatch certainly did contain a defiance of Russia, but only in case Russia should object to yield in conformity with the criticisms contained in the document, and all of which resulted in one very definite proposal, or rather demand—namely, that Russia should undertake to lay the whole treaty of San Stefano before the powers in congress, in order to allow those powers to determine how each article separately, or in conjunction with all or any of the rest, affected the previous treaties of 1856 and 1871.

Nothing could be plainer or simpler than this position of the British government; but so many quibbles were made use of on all sides, in England, amongst the office-seekers, as well as in Russia, that weeks were wasted in refuting the most puerile arguments.

That the position taken up by Lord Salisbury in his despatch was warranted by the course of events, and that his defiance of Russia, such as it was, was also justified, is amply proved by a retrospect of the course of the negotiations, and the relations between England and Russia since the commencement of the dispute in the East.

Lord Derby, in his reply to the circular of Prince Gortschakoff, announcing and vindi-

cating the commencement of the war between Russia and the Porte, had urged many reasons and considerations why he could not agree with the circular; why he thought the Russian government had made out no case whatever for their belligerent conduct; and, finally, after having urged many reasons of that kind, he concluded with this paragraph—"The course on which the Russian government has entered, moreover, involves graver and more serious considerations. It is in contravention of the stipulations of the treaty of Paris, 1856, by which Russia and the other signatory powers engaged, each on its own part, to respect the independence and territorial integrity of the Ottoman empire, and the conference of London of 1871, at the close of which this stipulation was affirmed by the Russian plenipotentiary, who signed the declaration, affirming it to be an essential principle of the law of nations, that no power can liberate itself from the engagements of a treaty, or modify the stipulations thereof, unless with the consent of the contracting parties, by means of an amicable settlement. In taking action against Turkey of its own accord, having recourse to arms without further consultation, the Emperor of Russia separated himself from the European concert which had been maintained, and, at the same time, departed from the course to which he himself authoritatively recorded his assent."

This announcement was made at the beginning of the war, as far back as May 1st, 1877. It was upon the principles of that declaration that Lord Beaconsfield founded his policy; and had not the above engagement been entered into by the Russian emperor, if it had not been held a solemn one in the face of Europe, no policy like that would have been adopted by England. Consequently, these principles were acted upon when government received private information that negotiations were about to commence between the belligerent powers. No sooner had the information reached them than the Secretary of State addressed to her majesty's ambassador at St. Petersburg, instructions to state, that in order to avoid possible misconceptions, and in view of reports which had reached her majesty's government, they were of opinion that any treaty between Russia and the Porte, affecting the treaties of 1856 and 1871, must be a European treaty, and would not be valid without the assent of the powers who were parties to those treaties. On the 23rd of January, having received no answer from Russia with respect to these representations, Lord Derby telegraphed to Lord Loftus, pressing for an answer; but on the 24th of January, ten days after the original representation, Lord Loftus announced, that though he had received no answer himself, he believed that Prince Gortschakoff accepted his original representation regarding the opinion of her majesty's government, which did not necessarily require an answer; but, if an answer was required, it would probably be given by his majesty's ambassador in London; and accordingly, on the day after, a message was received by Count Schouvaloff, and communicated to Lord Derby in the shape of an extract from the telegram from Prince Gortschakoff:—"We repeat the assurance that we do not intend to settle by ourselves European questions having reference to the peace that is to be made." Meanwhile, information reached government of the negotiations that were taking place between Russia and the Porte at Kesanlik—negotiations which were conducted with the utmost secrecy and mystery. Lord Derby, therefore, on the 29th of January, addressed the following despatch to Lord A. Loftus:—"I have to instruct your Excellency to state to the Russian government, that her majesty's government, recognising in the arrangement made by the Russian government with the Turkish government at Kesanlik the conclusion of an armistice and the basis of a peace, declare that so far as those arrangements are calculated to modify European treaties, and to affect general and British interests, they are unable to recognise in them any validity, unless they are made a subject of a formal agreement between the parties to the treaty of Paris." At the same time, Lord Derby sent a circular in identical language to her majesty's ambassadors at all the Courts, ending with this additional sentence:—"Her majesty's government entertains the hope that the view of the case as we have stated it, which is entirely based upon the treaties, and more especially upon the treaty of London of 1871, will receive the assent of the powers who were parties to that treaty." On the 30th of January, the following reply was received from the Russian government in a despatch from Lord A. Loftus:—"I received your lordship's despatch yesterday, containing declarations

relative to the validity of the treaty of peace, and I have this morning communicated them to his highness. Prince Gortschakoff stated, that to effect an armistice certain bases of peace were necessary, but that they were only to be considered as preliminary. He stated categorically that the questions therein of European interests would be concerted with the European powers, and gave an assurance to that effect." To the same effect were the statements of the Russian ambaasador in London; and there is no doubt that Count Schouvaloff made no representation to her majesty's government which he was not justified in making by the instructions which he possessed.

This is the diplomatic history of the month of January, the month in which parliament assembled. The above declarations by the Russian minister, which her majesty's government were induced to believe satisfactory, were also deemed satisfactory to the Austrian government; because, immediately after their receipt—that is, in the early days of February—a formal invitation was received from the government of Austria to a conference to be held at Vienna—a communication made with the knowledge of Russia, and, to use the language of the despatch, "appreciated" by Russia. A distinct understanding ("reglement definitif") was to be arrived at with regard to the general affairs touched by the war, and in which all necessary modifications might, with the concurrence of the signatory powers, be effected in the previous treaties, to harmonise them with the present situation. Thus it was avowedly as a signatory to the treaties of 1856 and 1871 that Austria sent the invitations, and it was in their character as signatories that the powers received them. The month of March was not rich in diplomatic documents, but it was not an uneventful month. During the whole of that period Austria was busy in conferring with the different Courts of Europe, and making arrangements for the meeting of the congress. There were many suggestions made. There was the project that the congress should assemble at Vienna; but objections were made by some powers to the meeting being held in a capital city. Then there were discussions as to the presidency, to the locality, and to the name of the meeting—whether it should be called a congress or a conference, both of which are exactly the same—and whether it should be presided over by a Secretary of State, or by some other minister. All these were discussions which occupied many minds; but they did not occupy the mind of the British government: that government never made the slightest difficulty on those hands. There were persons mentioned, perhaps, of whom they did not highly approve as presidents of the conference—as, for instance, Prince Gortschakoff; they did not always approve of the locality which was suggested; but they never made any objection of any kind. They thought that the interests of peace were of too vast a magnitude to weigh, for a moment, with these comparatively petty considerations; and so far as government were concerned, as to whether it was to be a conference or a congress that was to be held, whether it was to assemble at Vienna or at Berlin, or who was to be the president of the conference, or matters of that kind, no difficulties at all were made by them. Government were anxious that this congress or conference should meet, and they held that its meeting was the only means then attainable by which the peace of Europe could be obtained. Thus, early in March, an invitation arrived from Austria to meet the congress at Berlin. The objections which had been made to Vienna as being a capital city seemed to have been waived, and a congress at Berlin was invited. Without a moment's hesitation government accepted that proposition, and asked no reason why Berlin should be favoured instead of Vienna. All that was wanted was a meeting of the congress; but, in order that there should be no delay, and remembering the most critical events that had taken place in February, when Austria was carrying on these preliminaries for the minor purposes of the negotiation, and remembering that during the whole of that time secret negotiations were carried on between Russia and the Porte, and that during those negotiations the Russian armies were advancing, and, if not occupying, encircling Constantinople—and remembering, also, that they had felt it their duty to advise her majesty to send her fleet to the Sea of Marmora, government considered that it was very important, that when they assented to a congress at Berlin, the policy of her majesty's government should be again, in an unmistakable manner, expressed. Accordingly, the Secretary of State, on the 4th of March, wrote to Count Beust, that "her majesty's government, however, con-

sidered that it would be desirable to have it understood, in the first place, that the whole question of the treaty between Russia and Turkey should be considered a subject to be discussed in the congress, and that no alteration in the condition of things previously established should be acknowledged till it had received the consent of the powers." Therefore, notwithstanding the eventful and the perilous circumstances that were occurring, government were consistent in maintaining the great principle which they vindicated before the war commenced, which they repeated on other occasions, and of which, when the congress was about to meet, they felt it their duty to remind the other powers. A day or two afterwards, Lord Derby—uneasy, probably from some rumours that may have reached him, or some slight indications of the Russian policy—wrote, on the 13th of March :—

"With reference to my despatch of the 8th instant, I have to request your Excellency to inform Count Andrassy, that in order to avoid any misapprehension as to the meaning of their recent declaration contained in my note to Count Beust of the 9th instant, her majesty's government desire to state that they must distinctly understand, before they enter into congress, that every article in the treaty between Russia and Turkey will be placed before the congress, not necessarily for acceptance, but in order that it may be considered what articles require acceptance or concurrence by the several powers, and what do not." After some slight delay, government received the following communication from Prince Gortschakoff, dated the 17th of March :—

"In answer to the communication by Lord Augustus Loftus of the despatch in which Lord Derby has answered the proposal of Count Beust respecting the meeting of a congress at Berlin, I have the honour to repeat the assurance which Count Schouvaloff has already been instructed to give to the government of her Britannic majesty—namely, that the preliminary treaty of peace concluded between Russia and Turkey will be textually communicated to the great powers before the meeting of the congress, and that, in the congress itself, each power will have the full liberty of its appreciations and of its action ('la pleine liberté de ses appréciations et de son action')."

Now, of the meaning of "liberty of its appreciation and of its action," different interpretations may, no doubt, be furnished; but it was an expression of classical obscurity, in which Delphi itself could hardly be more perplexing. Then comes a note which, on the 21st of March, the Secretary of State addressed to Count Schouvaloff :—

"Her majesty's government have considered the communication which you were authorised by Prince Gortschakoff to make on the 19th inst. Her majesty's government cannot recede from the position already clearly defined, that they must distinctly understand, before they enter into congress, that every article of the treaty between Russia and Turkey should be placed before the congress, not necessarily for acceptance, but in order that it may be considered what articles require acceptance or concurrence of the other powers, and what do not. Her majesty's government are unable to accept the view now put forward by Prince Gortschakoff, that the freedom of opinion and action in congress of Russia, more than every other power, may be restricted by this preliminary understanding. Her majesty's government further desire to ask the government of Russia whether the communication of the treaty in its entirety to the various powers, shall be treated as a placing of the heads before the congress, in order that the whole treaty may be considered and examined at the congress."

To this government received a conclusive answer. "I lost no time," said Count Schouvaloff, "in communicating to Prince Gortschakoff the tenor of the letter you did me the honour to address to me on the 21st." As different interpretations had been given to the "liberty of appreciation and action" which Russia thought it right to reserve to herself at the congress, the imperial cabinet defined the meaning of the term in the following manner :—"It leaves to the other powers the liberty of raising such questions at the congress as they might think it fit to discuss, and *reserves to itself the liberty of accepting, or not accepting, the discussion of these questions.*" Now this simply meant that, though any of the powers might raise objections, Russia reserved her right, not to discuss them! Thus, however ambiguous the language was in previous instances, however various may have been the expressions used, there is no doubt that the correspondence between the two Courts ended in a refusal, on the part of Russia, of that which England believed

to be a just, a necessary, and an absolutely indispensable condition of her entering into the congress; and which, as was contended by all Europe, Russia, by her previous engagements as one of the signatories of the treaties of 1856 and 1871, was bound to comply with—viz., to submit the treaty of San Stefano for discussion in the congress.

That treaty consisted, as we have seen, of twenty-nine articles, and, with the exception of mere technical ones, every article was a deviation of some sort, if not a violation. It was for this reason that it was negotiated in secrecy, and encircled in mystery from the beginning to such a degree, that the Porte was commanded by Russia not to allow a single stipulation to be known to the neutral powers—not even to the neutral powers who were the allies of Russia, and without whose neutrality Russia could not have accomplished its purposes, and who would never have adopted that policy of neutrality unless they had believed that Russia was bound by the treaties of 1856 and 1871. In the first place, the treaty of San Stefano entirely abrogated and abolished what is called Turkey in Europe—the dominion of the Ottoman empire in Europe. It created, in the first place, a large State which, under the name of Bulgaria, is inhabited by many races who are not Bulgarians. It reached to the shores of the Black Sea; it seized upon the ports of that sea; it extended to the coasts of the Ægean, and it appropriated the ports of that coast. It provided for the government of this new Bulgaria by a prince who was to be selected by Russia; its administration was to be organised and supervised by a commissary of Russia; and this new State was to be garrisoned for an indefinite period of years, but certainly for two years, by Russian troops. But it was not merely this vast district—this vast extent of country—which was taken from the Porte, and in which the government of Russia was substituted for that of Turkey; but by provisions and stipulations in the treaty, the distant provinces of Greece, of Epirus and Thessaly, and Bosnia, were almost entirely cut off from Turkey, and were invested with privileges—that is to say, new laws, which were to be devised and supervised by Russia: so that it may be fairly said that the whole of the dominions in Europe of the Ottoman Porte were taken from it, and, for its power and administration, those of Russia to be substituted. The case was similar in Asia. The arrangements with regard to Asia would have converted the Black Sea almost as much into a Russian lake as the Caspian. The harbour of Batoum, which had not been acquired by conquest, and was still in the possession of the Porte, was seized by Russia. All the strongholds of Armenia were seized by Russia. The same process which was to be applied to European Turkey, was also to be applied to the province of Armenia; and the rest of that great province, which was nominally left to Turkey, was to be subjected to laws devised and supervised by Russia. Then, besides all this, there were the claims of Russia on that district of Bessarabia of which she was deprived after the Crimean war. This was not a trifling matter, or one in which a mere local interest was at stake. The clause in the treaty of Paris with regard to the cession of the district of Bessarabia was a clause upon which Lord Palmerston placed the utmost stress and importance. It involved, he said, the emancipation of the Danube; and it was Lord Palmerston, and not a local interest, that insisted upon the insertion of that clause in the treaty of Paris. It was inserted in the original preliminaries. An attempt was made by Russia to evade the fulfilment of that article; and Lord Palmerston considered it of such importance, that even the congress of Paris was, at one time, nearly broken up because of the efforts to evade the carrying of that cession into effect. Therefore, this closing of seas and of rivers, this securing of the freedom of the Danube, which was the great boast of the congress of Vienna, and was almost the only remaining achievement, was a matter of European interest which was of great moment, for it also concerned the navigation of the Black Sea and British commerce there. Again, if the treaty of San Stefano had been sanctioned by Europe, British commerce carried on from Trebizond, a mere roadstead, through Persia and Central Asia, would be stopped through the cession of Kurdistan. It concerned, also, the free navigation of the Straits; because if this treaty were carried into effect, one consequence would be that the Sultan of Turkey would be reduced to a state of absolute subjection to Russia. It was impossible to reconcile that either with the freedom of the Straits or the opening of the navigation of the Black Sea, or all those rights and privileges which Europe had hitherto enjoyed with regard to those waters, because

they were in the possession of a nominally independent sovereign. It simply meant the subjugation of Turkey, and leaving Constantinople in the hands of a power so enfeebled and so subjected to Russia, as to virtually and practically, in the long run, place the command of that fine situation in the hands of Russia, and Russia only.

All these considerations, which had more or less found expression in Lord Salisbury's despatch, were sufficient to induce parliament, by a large majority, to approve of the action which the government had taken; and on the following day, April 2, the proclamation calling out the reserves was published in the *London Gazette*, and posted up in the usual places, where it attracted large crowds, who generally approved it.

How imprudent it would have been for government to rely upon such vague terms as "full liberty of appreciation," &c., was proved by a slight but remarkably characteristic incident. Sir H. Elliot had informed his government that Prince Gortschakoff had declared that he would not allow the Bessarabian question to be discussed at the congress. In the published correspondence, the authority for this statement was mentioned as a "trustworthy person;" and the Opposition, thinking they had got the opportunity to cast discredit on the government sources of information, vehemently insisted on knowing who this trustworthy person was. It turned out to be the Roumanian agent at Vienna, who had received the following despatch from the Roumanian minister, M. Cogalniceano, and had communicated it to Sir H. Elliot:—

"Bucharest, March 16, 1878.

"At my request, General Ghika has had an explanation with Prince Gortschakoff on the question of Bessarabia and the intentions of Russia with regard to it. Prince Gortschakoff declared to our agent, that notwithstanding our clamouring, both at home and abroad, the Russian decision was irrevocable; that she would not bring this question before the congress, because it would be an offence to the emperor; that if another power wished to do so, she would not be a party to it; that it was with us that she wished to treat; that if she could not succeed in making us give in, she would take Bessarabia from us by force; that if we made an armed resistance, it would be fatal for Roumania."

It is true this was denied by the Russian government; but the only result of the denial, as far as government were concerned, was that Lord Salisbury declared that he was very glad he did not feel called upon to express an opinion as to which of the two parties spoke the truth.

After this exposure, and the decided steps taken by the British government, the Russian Chancellor thought fit to reply without delay to Lord Salisbury's circular; and on April 19th, a memorandum, dated April 7th, was published by the *Times* in a special edition late at night; Sir W. Harcourt entering the House of Commons quite breathless, triumphantly bearing aloft several dozens of the paper still reeking from the press. The memorandum itself was couched in the following terms:—

"First. It is not the case that the treaty of San Stefano creates a new Bulgaria, or a strong Slav State, under the control of Russia. Bulgaria existed,* although oppressed. Europe acknowledged this, and wished to remedy it. The conference of Constantinople indicated the measures which it considered necessary in order to obtain this result. In suggesting them the plenipotentiaries certainly had no intention of rendering them ineffectual. It must be admitted that their object was to endow Bulgaria with a national existence and real administrative self-government. In such a case, a State of Bulgaria, though divided into two powers, would have been constituted in embryo, and, developing under the protection of Europe, would have led to the result which the treaty of San Stefano seeks to arrive at. The refusal of the Porte, and the war which followed, prevented, according to the admission of the Marquis of Salisbury himself, the return, pure and simple, to the programme of the conference of Constantinople. The treaty of San Stefano has simply rendered the consent of the Porte obligatory to a more complete, precise, and practical programme of reforms; but the fact that the treaty of San Stefano is merely a preliminary one, indicates that the Russian cabinet only wished to establish the principle without prejudicing its definitive application, which necessitated technical investigations, an exact appreciation of geographical necessities, and the conciliation of numerous interests. This is why many of the articles are drawn up in

* This was absurdly untrue. Bulgaria, before the war, only extended to the Balkans, and not to the Ægean, absorbing half Roumelia.

vague terms, leaving room for future understanding upon the modifications deemed necessary.

"Second. The treaty of San Stefano does not place the new State under the control of Russia. The Russian cabinet has done what it did for Moldo-Wallachia in 1830. Experience shows that the work accomplished then in the principalities was useful, and contributed to the prosperity of those provinces. It cannot be said that the European equilibrium has in any way suffered from this measure, or that Russia has gained any preponderating influence through it.* It may be added that, if Moldo-Wallachia, which owes its existence to Russia, that borders it, has succeeded in rendering itself perfectly independent of her, we may *à fortiori* reckon upon the same result for Bulgaria, the territory of which, in a certain anticipated contingency—the cession of the Dobrudscha to Roumania—would be separated from Russia.

"Third. The maximum term of two years was fixed for the provisional occupation of Bulgaria, because that lapse of time was judged necessary in order to maintain order and peace, and protect the Christian and Mussulman populations against reciprocal reprisals, reorganise the country, introduce national institutions and a native militia, and also because if the occupation had been indefinite it might have been looked upon as a preliminary to taking possession of the province, which in no way entered into the views of the imperial cabinet. It need not be said that, the term being approximative, the imperial cabinet is quite ready to abridge it as much as possible without injuring the success of the difficult work that had to be accomplished in the interests of the general peace.

"Fourth. The delimitation of the State of Bulgaria was indicated only in general terms. The sole fixed principle laid down is that of the majority of the population, and certainly it is difficult to imagine one more equitable or more rational. It meets the objections deduced from the difference of race of the minority, the interests of which have, moreover, been guaranteed by express stipulations; but the application of that principle has been reserved for the mixed commission, the local investigations of which can alone dispel all the uncertainty surrounding these disputed questions. It has been objected to the preliminary treaty that it assigns to Bulgaria ports on the Black Sea; but the Constantinople conference itself judged that, without outlets upon the sea, that country could not prosper. As to the ports on the Ægean, the commercial development of Bulgaria was alone in view; and certainly Russia would not profit by that development, but England and the powers whose Mediterranean commerce is much more active than that of Russia, and which will always be a powerful agent for the maintenance of their influence.

"Fifth. The preliminary treaty in no way places Bulgaria under the domination of a ruler chosen by Russia. It is formally stipulated that the ruler shall be elected by native administrative councils, with the confirmation of the Porte and the assent of Europe, and that the members of the reigning dynasties shall be excluded. It is not easy to see what better guarantees could be given for the freedom of the election. As to the organisation of the principality, it is confided to an assembly of native notables. The Russian commissary has merely to exercise the right of surveillance, in concert with the Ottoman commissary. Moreover, an understanding between the great powers and the Porte is expressly reserved in order to assign to the Russian commissaries special delegates, pending the provisional measures taken by the authorities. The Russians have no intention, as is affirmed, of making Bulgaria enter the Russian political system. Scarcely anything has been changed in the institutions to which the country is accustomed. Attention has merely been given to the execution of the law, which was defective. Some new arrangements have been introduced—the abolition of exemption by purchase from military service; the abolition of the tithes, and their replacement by a more normal impost; the abolition of the farming of the taxes, the principal source of abuses; and finally, the right assigned to the Christians in mixed localities to challenge, during the elections, such Mussulmans as are known to have been guilty of acts of fanatical persecution against the Christians. In addition, the state of siege in which the country was placed during the war rendering indispensable the nomination of Russian governors, Bulgarian vice-governors were everywhere assigned to them, in order that after the peace, and as tranquillity became re-established in the country, the

* It enabled the Russians to march their armies safely through Roumania into the very heart of Turkey.

latter might be substituted for the Russian governors, without interrupting the regular course of the administration of the country. The exclusive object of all these preliminary measures was, to protect the national development, and render possible the meeting of the first Bulgarian assembly summoned to settle the institutions of the principality.

"Sixth. The assertion that the treaty of San Stefano would extend Russian influence beyond the limits of Bulgaria by stipulating for improved institutions in Epirus and Thessaly cannot but occasion surprise. If Russia had made no stipulations in favour of these provinces, she would have been accused of sacrificing the Greeks to the Slavs. If she had stipulated for the vassal autonomy, that is censured in the case of Bulgaria, she would have been accused of entirely destroying the Ottoman empire, and of establishing Russian influence there. The imperial cabinet has always understood the mission assigned to it by history as protector of the Christians in the East, without regard to race or sect. If it has made more complete and more precise stipulations in favour of Bulgaria, it is because that country was the principal cause and scene of the war, and because Russia had acquired positive rights as a belligerent; but in confining herself to stipulate improved institutions for the Greek provinces, she reserved to the great powers the faculty of claiming more extended ameliorations. It is equally incorrect to say that the treaty of San Stefano has stipulated that those institutions were traced in a Russian direction. The general type to which they have been assimilated by the treaty is that of the Cretan settlement—which was agreed to by the Porte under the influence of the great powers. The treaty stipulated that the application of these arrangements should be carried out by a special commission, in which the native element would be largely represented. It is true it compels the Porte to consult Russia before executing the stipulations, but does not prohibit it from also consulting the representatives of friendly powers.

"Seventh. The subsequent clause respecting the protection of the members of the Russian church must have been quite misunderstood to be assimilated to that of the treaty of Kainardji, abolished 1856. The clause of Kainardji concerned the Greek orthodox religion, and might embrace all the Christian subjects of the Sultan professing that religion. The clause of the treaty of San Stefano mentions exclusively monks, priests, and pilgrims, either Russian or of Russian origin, and stipulates in their favour only the same rights, advantages, and privileges which belong to ecclesiastics of other nationalities. After this it is impossible to consider the assertion just, that the stipulations, as a whole, of San Stefano are of a nature to increase the power of the Russian empire in countries where the Greek population predominates, to the prejudice of that nation, and of all the countries having interests in the East and the Mediterranean.

"Eighth. The assertion is at least exaggerated that the San Stefano stipulations respecting the retrocession of Bessarabia, the extension of Bulgaria to the Black Sea, and the acquisition of the port of Batoum, would render the will of Russia predominant over the whole of the districts of the Black Sea. Russia powerfully contributed in the past to emancipate Greece and Roumania.* It is not easy to see in what manner her power has more profited thereby than that of other States. The retrocession of Bessarabia by Roumania would be simply a return to the order of things, modified twenty-two years ago, for motives which no longer have any existence, legal title, or even pretext, since the liberty of the navigation of the Danube has been placed under the control and guarantee of the international commission,† more especially from the moment when Roumania proclaims her independence and Europe seems disposed to recognise it. It should be remarked, moreover, that this retrocession does not include the whole of the part of Bessarabia ceded in 1856. The delta of the Danube is excluded, and the proposal of the Russian government is to restore it to Roumania, from which it was taken in 1857. This circumstance considerably reduces the importance of the retrocession demanded, from the point of view of its influence upon the navigation of the mouths of the Danube.

"Ninth. Batoum is the only good port on

* But only in order to break up a strong, or at any rate a moderately strong, Turkey into a series of small powers, whose antagonisms would prevent them from opposing any serious resistance to Russia.

† This did not prevent Russia from blocking up the river from the Black Sea to the Austrian frontier, stopping all navigation, and doing serious damage when it suited her in '76 and '77.

this coast which suits the commerce and the security of Russia, withdrawing from a war which she has carried on by herself, and at her exclusive cost. It is, therefore, by no means a gratuitous concession; it is far from being the equivalent of the pecuniary indemnity which it would represent. As to the acquisitions in Armenia, they have only a defensive value. It is possible that England would prefer to see these strong positions in the hands of the Turks; but from the same motives Russia attaches value to their possession for her own security, in order not to have to lay siege to them in every war that may take place, as with the fortress of Kars, which she has had to take three times in the course of half a century. Cessions of territory are a natural consequence of war. If England had wished to save Turkey from them, all she had to do was to join Russia, as was twice proposed to her, at the time of the Berlin memorandum, and again during the mission of Count Elstow Sumarakow to Vienna, with the view of exercising a collective maritime pressure on the Porte, which would probably have been sufficient to attain the results now gained at the cost of so much bloodshed. The English government, having refused these proposals, ought not now to deny to Russia, who has shed her blood, the right to demand the establishment of a condition of things which will henceforth relieve her from the necessity of similar sacrifices, or at any rate will render them less burdensome.* It is wholly impossible to understand the consequences which are attempted to be derived from these rectifications of frontier, as regards the freedom of European commerce, from Trebizond by way of Persia. These assertions are in contradiction with those more than once advanced by different members of the British cabinet, according to which the actual possession by Russia of Erzeroum and Trebizond would in nowise endanger English interests. The rectifications of frontier in Asia stipulated in the treaty of San Stefano are far from having this extent. It is to push distrust to extravagance to affirm that they place Russia in a position to impede by prohibitive barriers the commercial system of Europe.

"Tenth. The complaint which has been made respecting the indemnity claimed of Turkey in the treaty of San Stefano is certainly unfounded. The amount of this indemnity bears no proportion to the oppressive burdens which the war has imposed on Russia. It may be that the amount exceeds Turkey's present means of payment, and increases the difficulty she experiences of satisfying her creditors. But it should be remembered that Turkey failed in her obligations to her foreign creditors before the war, and in consequence of the disorders caused by her bad administration.† It may be hoped that if peace is established on those reasonable bases which the treaty of San Stefano has in view, and to which the sanction of Europe would give a durable and solid character, there would result for Turkey a diminution of expenditure, and an increase of resources which would place her in a position to respond to the claims of her foreign creditors. It was in view of these possible results that the stipulations of the treaty of San Stefano relative to the indemnity were left in the vagueness which is now made a ground of complaint. If the amount of the indemnity is criticised, much more would have been the requirement of immediate payment. No precise mode of payment had been insisted on: we might have encroached upon some source of revenue already hypothecated to the foreign creditors of the Porte. In the treaty of San Stefano this has been avoided by reserving the mode of payment for ulterior settlement. It is true that by taking this precaution we are exposed to the suspicion of designing to paralyse or to dominate Turkey for a series of years, or else to commute the indemnity for new territorial acquisitions. It would have been more simple‡ and natural to suppose that the design was to consider the interests of Turkey, as well as those of Europe, and to uphold the Turkish government in the path of a faithful observance of its engagements, and of pacific relations profitable for all. But against suspicion and distrust no remedy avails.

"Eleventh. At the conclusion of the despatch of the Marquis of Salisbury, we learn with pleasure that the object of the government of her Britannic majesty, and its desire, are always to ensure the good government, peace, and liberty of the populations to which these benefits are wanting. We see

* The government refused to act thus—above all, because it would have been contrary to treaty arrangements, and would have premised an alliance with Russia, and an identity of interests which did not and could not exist.

† And, it must be remembered, in consequence of General Ignatieff's evil advice to the Sultan, which, after due allowance for party feeling and exaggerated reports, can no longer be doubted.

‡ Excessively simple!

with equal satisfaction the admission frankly made that this policy has been frustrated by the unfortunate resistance of the Ottoman government itself; that in presence of the modified circumstances of the present time, the same result cannot be obtained to the same extent by the same means—that is, the programme of the conference of Constantinople—and that great changes may, and no doubt will be necessary in the treaties by which the south-east of Europe has hitherto been governed. If we add to these considerations that the reiterated refusals of the English government to associate itself to a material collective pressure to be exercised upon the Porte have prevented Europe from obtaining pacifically the results desired by the London cabinet itself, we cannot but recognise that the war and the peace of San Stefano have responded to the exigencies of the situation that the Marquis of Salisbury has explained with great frankness and much elevation of ideas. That situation may be thus summed up:—The existing treaties have been successively infringed for twenty-two years—first, by the Turkish government, which has not fulfilled its obligations towards the Christians; then by the united principalities; by the French occupation of Syria; by the conference of Constantinople itself, which constituted an interference in the internal affairs of the Ottoman empire. The Marquis of Salisbury has himself recognised that great changes must and ought to be made.* Under present circumstances we have yet to learn how his lordship means to practically harmonise these treaties, and the rights recognised by Great Britain and other powers, with the friendly desire towards the realisation of which the united action of Europe has always been directed, of good government, peace, and liberty for the populations to which these benefits have hitherto been wanting. It remains also to be made known how, without the preliminary bases laid down by the San Stefano treaty, his lordship means to attain the object desired by all while taking fairly into account the rights acquired by Russia for the sacrifices she has borne—and borne alone—in order to render the realisation of them possible. The despatch of the Marquis of Salisbury contains no reply to these questions.† This is why it seems that the considerations it contains would have more naturally found an entire liberty of appreciation and of action, had the objections been accompanied by practical propositions of a nature to ensure an understanding for the solution of the actual difficulties in the general interest of a solid and durable pacification of the East."

Now, although this reply of Prince Gortschakoff's was excessively colourless, and left no clue as to his future intentions—whether he meant to accede to Lord Salisbury's demands that the whole of the treaty of San Stefano should be considered as having been laid before congress, still it raised hopes in the best-informed quarters amounting to conviction, that Russia would ultimately yield, and only wanted to gain time to exercise all her influence and persuasion upon other powers to assist her, or, at any rate, not to oppose her.

One of the great difficulties in Prince Gortschakoff's way was the attitude of Austria. If he could have been sure that Austria would allow herself to be compromised by an occupation of Bosnia and Herzegovina, and thus take part in a practical division of Turkey, his course of action would have been clearly marked out. But he was not sure to what extent Austria could be involved. There were, it is true, many factors on which he could rely;—on the discontent of the Hungarians, on the ambition of the Italians, the desire of Germany to interfere in Austrian affairs, &c., &c.: but all the factors were more or less uncertain—almost as uncertain as the intentions of the British government.

It was therefore absolutely necessary to ascertain exactly—or as exactly as possible—what were the minimum demands of Austria and England to be put forward at a congress. This was also the opinion of Prince Bismarck, who stated roundly and plainly, that unless the respective cabinets could agree as to the minimum demands and the maximum concessions, it would be useless for him to issue invitations or fix the day for congress to assemble.

Prince Bismarck therefore advised the three cabinets of London, Vienna, and St. Petersburg, to negotiate separately on these points; and when an understanding was arrived at, he would be prepared to name the day for congress to assemble.

* But the dispute was as to the means by which those changes were to be effected.

† This is not true. The Marquis of Salisbury plainly stated that the object desired could be obtained by a congress, before which Russia should agree to lay the preliminary treaty which she concluded at San Stefano.

This was ultimately agreed to; and whilst General Ignatieff took the sense of the Vienna cabinet on Austro-Russian questions and interests, Count Schouvaloff acquired from Lord Salisbury exact and precise information as to what Great Britain would demand, and what she would concede. With this information Count Schouvaloff proceeded to St. Petersburg, the stipulation on all sides being that the negotiations should be kept strictly secret.

While all this was going on, however, the military preparations continued on all sides. Austria had partially mobilised her troops, and had also taken a credit of £6,000,000. Russia kept her armies in readiness to resume hostilities at any moment, and took measures in Roumania to secure her flank and rear against any Austrian attack; and the British government displayed the utmost activity in naval and military preparations, and kept a strict watch upon all the Russian movements.

Consequently, though the chances of a congress meeting had really greatly increased, it was only behind the scenes that this was known. Otherwise matters were apparently of a nature eminently calculated to inspire alarm. But the least disquieting incident was the sudden information, published on April 17th, that the British government had ordered the following troops from India:—The 9th Bengal cavalry, the 1st Bombay light cavalry, the 2nd Ghoorkas, the 13th and 31st Bengal regiments, the 25th Madras regiment, two regiments of Bombay native infantry, two field batteries of artillery from Bombay, two companies of sappers and miners from Bombay, and two from Madras.—This step was highly approved of by the great majority of the public, especially as the Russians had announced their intention of fitting out a fleet of vessels to prey upon British commerce in the event of war, and were bringing an enormous pressure to bear upon the Porte to induce it to surrender Varna, Schumla, and Batoum. To this, however, the Porte refused to consent, alleging, with much force, that as the treaty of San Stefano was only preliminary, and had, according to the Russians themselves, to be sanctioned by Europe before it became valid, they could not be expected to fulfil its provisions until this sanction had been obtained. Thus for the moment there was a pause in the great drama pending the decision of the Czar as to the congress; and in the meantime Roumanians, Turks, Greeks, Serbs, Lazes, Armenians, Kurds, Albanians, Pomaks, and Bosnaks, all went more or less their own peculiar ways, endeavouring to acquire a position which would entitle them to a hearing or consideration at the congress.

CHAPTER XXXVI.

THE FIGHT FOR THE SICK MAN'S LEGACY.

FROM the Adriatic to the Caspian, from the Danube to the Ægean Sea, all the rival races, tongues, and nationalities had been thrown into a flutter of excitement by the treaty of San Stefano. Everybody hated everybody else, and nobody trusted the other. It was a very whirlpool of conflicting passions; and round this whirlpool stood frowning and forbidding the hard granite rocks of Russia and England, and at the foot of these rocks lay the shifty, shifting, graceless quicksands of Austria—a danger to friends as well as to foes, but deservedly swept partially away by the turbulent flood washing their treacherous borders.

Everybody was more or less disenchanted with his *protegés* and friends. The Hungarians began to lose their admiration for the Turks as soon as they saw that the tide of war had set in irrevocably against the Porte, and that probably they, the brave and valiant Magyars, would have to fight their own battle. In England, even Mr. Forbes announced that he felt obliged to confess that the Bulgarians, in American parlance, were a big "fraud;" whilst in Russia, one of the prominent journals published the following account of the course of events:—

"July, 1876.—Wild enthusiasm. Complete enchantment with the Servians. Desire for war.

"October, 1876.—Despondency. Dis-

enchantment with regard to the Servians; hostility towards them; and regret for what has been done for them.

"November, 1876. — Enthusiasm for a war in the interest of the Bulgarians. Pity for, and sympathy with them.

"April, 1877.—Complete ecstasy. Brotherly love for the Bulgarians. Dissatisfaction with the Servians.

"August and September, 1877. Despondency in consequence of failures (before Plevna and elsewhere). Silent irritation against the Bulgarians. Readiness to abandon the whole thing if only a way could be found out of it.

"December, 1877. — Intoxication from success. Desire to carry the thing out to the end. Bad feeling towards the Bulgarians.

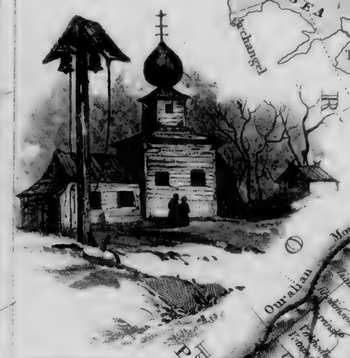
"February, 1878.—Wild delight at the peace and the yielding disposition of Turkey. Sympathy with Turkey and corresponding coolness towards the Bulgarians. Passionate determination to insist on the acquisition of Batoum. Consciousness of the necessity of this acquisition. Indifference to the question of England and Austria.

"May, 1878.—Complete disenchantment on the score of the Bulgarians. Suspicions of insincerity on the part of the Turks. Talk about Batoum not being so necessary for us as it had formerly seemed. Something like disgust with the Eastern Question. Talk about getting the thing finished anyhow."

This is a very fair picture of the actual state of Russian opinion. There was only one sentiment which remained unchanged—that was hostility to and hatred of England and everything English. This feeling was even extended to the matter of coats. Amongst the enterprising speculators who arrived at Buyukdere during the presence of the Russian officers was a ready-made-clothes dealer, who hoped to make money by supplying a civil costume to the Russian officers. A Russian officer did come to him one day, and he wanted a coat; and, after looking at several, he found one which he said he would buy, as it fitted him as well as if it had been made for him. The tailor agreed with him, of course, but thoughtlessly remarked, in descanting upon the qualities of the garment, that it was the latest style worn in London, and was known as the "Salisbury coat." "The what coat?" asked the Russian. The dealer repeated that the coat was named after Lord Salisbury, and the Russian immediately pulled it off, picked up his uniform, and walked out of the shop.

Another matter which greatly disenchanted the Russians, was the expenditure caused by the prolongation of negotiations, and which amounted to more than the amount spent during the actual hostilities. This was but natural, inasmuch as, during active operations, there was never any question of payment for stores captured and contributions levied on the Turkish towns and villages. With the cessation of hostilities, however, payment to a certain extent had to be made, so that between the 13th of March and the 27th of May, 1878, the paper money in circulation increased by more than 69,000,000 roubles, and 100,000,000 of exchequer bonds were issued. Thus, in the space of two months and a-half, the national debt had been increased, in round numbers, by 170,000,000—that is to say, by considerably more than 2,000,000 a day, whilst during the war the monthly cost was not more than 30,000,000. The probability of this heavy daily expenditure being continued during several weeks, and perhaps months, was, of course, not a pleasant prospect, especially for those who believed—and their name was legion—that the congress would end in a new war. In addition also to their troubles abroad, the Russian government had its hands full at home with Nihilist and Socialist conspiracies and riots, the excitement in consequence reaching its height when General Trepoff, the Minister of Police, was fired at and severely wounded by a woman named Vera Sassulitch; and the would-be assassin, though she confessed her crime, was acquitted by a jury in St. Petersburg.

The whole story is too characteristic of Russian society to be omitted here. Vera Sassulitch's attempt was connected with a trial of certain Nihilists, which lasted for a considerable time, and which ended finally in the acquittal of the majority. Amongst those who had previously been convicted of an attempt on the security of the State, and of plotting against the government, was a man named Bogoliuboff, who, before being sent to penal servitude, had been kept for some time in a House of Detention of the Ministry of Justice, used only for persons under arrest. Now, in Russia, since the new legal enactments, the internal regulations of the law courts and other legal



establishments were independent of the ordinary police agents and *gendarmes*, who have not even access to these places. General Trepoff having proceeded to this house, and having seen that Bogoliuboff was taking a walk in the yard, with several persons under arrest, pointed out this breach of the regulations, and ordered the man to retire. Bogoliuboff, not knowing who the general was, answered with rudeness, keeping his cap upon his head and refusing to remove it, for which acts General Trepoff gave orders to the authorities that he should receive twenty-four strokes with a birch as a punishment. Although Bogoliuboff had already forfeited his civil rights, this order was nevertheless arbitrary and illegal. There was a kind of insurrection in the prison in consequence, and the fact soon became known to the Nihilists outside, who corresponded among themselves throughout the empire. Mdlle. Vera Sassulitch, also a Nihilist, and in love with Bogoliuboff, swore to avenge him. She accordingly watched for General Trepoff, and as he was coming out of a confectioner's shop, held the muzzle of a revolver close to him and fired, placing his life for several weeks in danger. On April 12, she was brought to trial and was acquitted by the jury, although she admitted before that body and the judges, that in attempting the life of General Trepoff she had been actuated by a spirit of revenge and with the premeditated intention of killing him. It must be admitted that an acquittal under such circumstances as these was scarcely to be expected. Still, the verdict was received with applause by the people in court, composed in a large measure, it need hardly be said, of adherents of the accused woman. There were, meanwhile, in the reserved seats several eminent personages — among others the Chancellor of the Empire, Prince Gortschakoff, who held General Trepoff in high esteem. Without waiting for the departure of the crowd of Nihilists and students who blocked up and surrounded the building in which the court sits, the Chancellor immediately caused Mdlle. Sassulitch to be set at liberty. Scarcely had she set foot in the street when she was loudly cheered by the mob—so great was the indignation at General Trepoff having inflicted corporal chastisement on Bogoliuboff; and the curious, who always assemble on such occasions, began to follow her, shouting all the time. Seeing this, a local functionary showed her into a vehicle, that she might return home in peace. But immediately the boldest of the students endeavoured to mount upon the vehicle and take the place of the driver. Being prevented from doing this, they followed for some distance, and at last the mob became so dense that the vehicle was obliged to stop. Mdlle. Sassulitch alighted from it; then, the police endeavouring to restore the circulation, an affray took place, amidst which two shots were fired, one striking a student in the forehead and stretching him on the ground stone dead, and the other wounding a woman. Mdlle. Sassulitch herself re-entered her residence safe and sound; but the next morning she had already disappeared, and successfully baffled the police in their attempts to re-arrest her; so that Prince Gortschakoff's stratagem of setting her at liberty completely failed in its treble object.

Then, besides being troubled at home by conspiracies and outbreaks of Nihilists and Socialists, the Russians were also harassed by insurrection in the rear of their victorious armies. The remnants of Suleiman Pasha's armies who had escaped to the Rhodope made common cause with the Pomaks inhabiting that region, and took to arms to such an extent that it was considered necessary to send a commission to inquire into their grievances, and the general condition of Thrace. In reply to the commissioners, the Pomak delegates declared that they were driven to arms by the abominable cruelties practised upon them by Bulgarians, who had, they alleged, hunted them down like wild beasts. Some exaggeration it was natural to expect in their account, but there were many patent facts which substantiated the complaints of the Thracian Moslems and rendered their despair intelligible. From Adrianople to Philippopolis nothing was to be seen but the blackened ruins of deserted villages. The Mahommedans of that region who had not time to fly before the Russian advance overtook them were pillaged, slaughtered, or dispersed as soon as the Russians entered the district. The attention of the Russian commanders was absorbed in military arrangements, and while they were thus occupied the Bulgars improved the shining hour and enjoyed a glorious feast of blood, rape, and plunder; and this condition of affairs lasted for some time after the signature of peace. There were, indeed, Bul-

garians who took no part in these acts of ferocity; but the great majority pursued the Moslem with fanatical hate, bent, seemingly, on his extermination. The first act of Russian organisation in new Bulgaria was to place the police and the magistracy in the hands of the Bulgars, and to disarm all the Mahommedan population. Thus the Bulgars were invested with powers which enabled them to follow up the persecution of the Moslems with telling effect, using the law as their instrument of oppression. "I have seen," said Wassa Effendi, one of the Turkish commissioners, "a Mahommedan's house sold over his head by decree of a Bulgar magistrate for a paltry sum, and the buyer forthwith destroy it and sell the materials." The Mahommedan fugitives who, furnished with Russian passes from head-quarters at San Stefano, had returned to their former homes, were not permitted to take possession of their property. The Bulgarian police entirely ignored the Russian permit. It is true that a Russian officer presided over every tribunal; but as he did not understand Bulgarese, he could exercise no real check over the proceedings on the Bench. Bulgarian delinquents thus enjoyed a very wide liberty, and were never convicted on the accusation either of Moslem or Greek. Round about Philippopolis the commissioners saw camped in the marshes several thousand Mahommedan refugees literally rotting away with miasmatic diseases. They were only permitted to encamp in these pestilential spots, not being even suffered to depart and join their brethren in the mountains. A ration of three-quarters of a pound of bread was allowed by the municipality to the children, and that body also offered work on the roads to the men. But the able-bodied men were so few, the wages so small, and the payment so tardy that few found relief in this manner. When the commissioners expostulated with General Stolepine, commanding at Philippopolis, on the carelessness, indifference, and incapacity displayed by the Russian officers in the execution of civil functions, his Excellency replied that there was nothing astonishing in the fact. The officers so employed were, he said, all military men, totally untrained for civil employment, and for the most part very ignorant; had they been capable men they would have been retained for civil employment in Russia. In the town of Philippopolis the police compelled the Mahommedan residents to sweep the streets. While the commissioners were in Philippopolis a raid against the fez worn by all Ottoman subjects except the Bulgars was made by the Bulgarian populace, and for two days this symbol of allegiance to the Sultan was snatched from the head of every wearer who dared to appear with it in the street, and then torn and trampled under foot. The third day the fury calmed down, Greeks, Catholics, and Jews who were fez-wearers before having sought peace under shelter of that shaggy shako of sheepskin which Bulgarians wear, and which is called a calpak. "If we suppose," says Wassa Effendi, "that Greeks and Catholics fare much better than the Moslems, we are certainly under a delusion." While the commission was sitting in Philippopolis the Bulgarians attacked a Catholic institution in a suburban village, stripped the *curé* of the church naked, and in his presence violated the sisters of the institution. "My note-book," added Wassa Effendi, "is full of cases of cruelty, injustice, or outrage which from day to day came within the range of my own observation." With regard to the mission with which Wassa Effendi and his colleague, Samih Pasha, were charged, it was, as the Russians who asked for it knew it would be, an utter failure. No amount of persuasion would induce these unfortunate people to surrender themselves to the Christian mercies of the Bulgars. The commissioners invited the chiefs to come and confer with them, but the chiefs refused. A deputation composed of Turkish and Russian officers was therefore despatched to the mountain to hold a parley with the commanders of the militia of the Pomak nation, the style assumed by the combatants of the Rhodope. The deputation was received at the Pomak outposts, and conducted to the tent of the chief, who spoke to them as follows:—

"We are here solely to protect ourselves from the Bulgars. All through the war we were hunted and massacred. After the war, misled by false promises of the Russians, we went back to our homes, where we were again hunted and massacred. You yourselves have seen our ruined villages. We saw that our extermination was planned, and we prefer fighting for our lives to being butchered like sheep. We will molest no one, but we will defend ourselves against attack. We shall not descend into the plain, for we are not insurgents; we are not here to attack, but only to defend. We will listen to no advice, nor believe any pro-

mises. We will not lay down our arms; in our greatest agony we appealed for help and protection in vain. We have only ourselves to trust to. We have no political project, no ideas of revolt."

The deputation wished to see another chief superior to the author of the foregoing declaration, but the Pomaks would not consent to take the Russian officers to him. At first the Turkish delegates refused to be separated from their Russian colleagues; but on the Pomaks pointing out that on their own ground it was for them to make their own rules, the Turkish officers consented to go without the Russians to the presence of a leading member of the provisional government of the Pomak people. The big chief held much the same language as the little chief outside had before held, but added:—

"We have no serious cause of complaint against the Russians. From time to time they have even protected us against the Bulgars, but they are quite powerless to give us efficacious and constant protection. They have not the means to do so. The Bulgars have massacred us, are massacring us, and will massacre us; so we will listen to no promise, to no advice. We will not lay down our arms; and now that you have heard that, go to your homes and come here no more."

The officers of the deputation stated that the Pomaks occupied strategic points, and were organised and encamped as an army in time of war. Another deputation, despatched later, was turned back by the outposts. They saw abundance of cattle and of agricultural implements; also great numbers of women and children. It was the belief of the commissioners, that if the Russians had been at all equal to the task they undertook, and had made any serious effort to protect life and property and maintain justice between Christian and Mussulman, the subsequent difficulties would not have arisen. There was, however, strong reason to believe that General Ignatieff planned the expulsion or extermination of the Mussulmans; as, it will be remembered, the first decision regarding the fugitives was that they should not be permitted to return to their homes. When this decision, against which Austria protested, was revoked, it was already too late. Most of the mischief had been done, and the Bulgars had broken loose from the control of their liberators. The position of the Pomaks was most pitiable. The commission was held and it failed, but its failure gave to the Russians a warrant for attacking the Pomaks in their mountain refuge; so that those who escaped getting their throats cut had only to look forward to being shot by the Russian troops.

Much the same state of things prevailed on the Greek frontiers in Thessaly, in Albania, along the Montenegrin frontier, and in Crete. All parties, the Turks included, expected wonders from the Berlin congress; and interesting to the participators in all these local struggles as their individual deeds might be, Europe did but little more than shrug her shoulders and say, "I told you so." In fact, everybody triumphantly said to everybody else, no matter to what phase of the question he referred, "I told you so." And the strange part of it all was, that almost every one of these vain-glorious persons was right—such was the diversity of interests, and such was the multitude of possibilities and probabilities which allowed persons of the most divergent opinions to be right on some point or other of one and the same question, the said point, of course, appearing to the arguer to exhaust the whole subject.

Meantime, however, the negotiations for the assembling of the congress had gradually come to a conclusion. Each of the cabinets concerned had at last found a method of arranging the basis upon which each thought it could successfully dupe the other; and thus at last the grand news gradually leaked out, towards the end of May, 1878, that all difficulties had been smoothed away, and that the congress would meet in Berlin on June 13, 1878.

CHAPTER XXXVII.

THE BERLIN CONGRESS.

For many days after it had been definitely settled that the congress was to meet at Berlin, this city was highly excited. For, although the attempts of Hoedel and Nobiling on the old emperor's life had cast a certain gloom over the town, the buoyant spirits of the Berliners could not long be damped, especially as the choice of their town for so important a meeting was a direct homage to the new position of glory which Germany had attained in consequence of her successful war across the Rhine.

Great, also, was the excitement in all the other capitals—least of all, perhaps, in Paris, which considered itself, somehow or other, defrauded out of the congress; and in St. Petersburg, where hopes were low, and fears were high. In London, on the other hand, there was almost a pæan of expectant victory rising above the subdued murmur of the Liberal malcontents, and entirely drowning the hoarse wail of Mr. Gladstone, when it was known that the modern Dick Whittington of politics, Benjamin Disraeli, Earl of Beaconsfield, was about to cross the seas and enter the lists against the wily Chancellor of the White Czar. No pains were spared duly to impress this fact upon the world at large. The newspapers—above all, the *Times*, popularly supposed to have been specially purchased by the Queen for the private use of Lord Beaconsfield and Prince Bismarck—sent hosts of correspondents to the city on the Spree, and opened enormous accounts at the Berlin bankers for ordinary and extraordinary expenses. There were there M. Blovitz, a Franco-Bohemian, the ordinary correspondent of the *Times* at Paris, and who afterwards became known, for a short time, as M. *de* Blovitz. There was Mr. Mackenzie Wallace, who was special correspondent at St. Petersburg; and there was M. L. Abel, a talented Prussian, who was the standing correspondent at Berlin. Then there was M. E. Simon, of the *Mémorial Diplomatique* of Paris; Herr Skreijschowski, of the *Politik* at Prague; M. Etienne, of the *Neue Freie Presse*, and about 100 more, all ready to chronicle word and deed, and say what ought to be, what ought not to be, and what might, could, and should have been.

As for the plenipotentiaries and diplomats, with or without a seat at the green table, their name was legion. *Great Britain* was represented by three plenipotentiaries—Lord Beaconsfield, Marquis of Salisbury, Lord Odo Russell. Secretaries—Mr. Montagu Corry, Mr. Philip Currie, Mr. Henry Neville Dering, Mr. Hertslet, Mr. Algernon Turnor, Mr. Austin Lee, Hon. J. Bertie, Hon. Eric Barrington, Mr. Charles Hopwood, Mr. E. Le Marchant Gosselin, Mr. Arthur Balfour, Lieutenant-General Sir Lintorn Simmons, Captain Edwards, Captain Ardagh, and Captain Fitzgerald.

Germany.—Prince Bismarck, Under-Secretary of State Von Bülow, Ambassador Prince Hohenlohe Schillingfürst. Secretaries—Privy Councillor of Legation Bücher, Envoy Von Radowitz, Councillors of Legation Busch and Baron Holstein, Secretaries of Legation Von Bülow, Count Herbert Bismarck, and Count Rantzan.

Russia.—Plenipotentiaries—Ambassador Count Schouvaloff, Ambassador Baron D'Oubril, Prince Gortschakoff. Secretaries—Privy Councillor Baron Jomini, Councillor of State Baron Fredericks, Secretary of Legation Count Adlerberg, General Anjutschin, Colonels Bobrikoff and Bogoluboff, and Councillors Sorokin and Toonoff.

Austria.—Plenipotentiaries—Count Andrassy, Ambassador Count Karolyi, Privy Councillor Baron Haymerle. Secretaries—Chief of Section Baron Schwegel, Envoy Herr von Teschenberg, Councillors Baron Hübner, Von Kosiek, Doczy, Von Ascher, Secretary Von Peschy, Baron Mayer, and Baron Pasette.

France.—Plenipotentiaries—M. Waddington, Ambassador Comte de St. Vallier. Secretaries—M. Després, Directeur des Affaires Politiques; M. Duclerc, Sous Chef de Cabinet; Secretaries of Embassy, Comte de Mouy, Fourchon, Paul Després de la Motte, Attachés Comte Montalivet, Vicomte de Beaucaire.

Italy.—Plenipotentiaries—Count Corti,

Ambassador Count Launay. Secretaries—Councillors of Embassy Curtopassi and Chevalier Tosi, Secretaries Marquis Bialbi and Marquis de Malaspina.

Turkey.—Plenipotentiaries—Alexander Carathéodori Pasha, Ambassador Sadoullah Bey, General Mehemed Ali Pasha. Secretaries—Parnies Effendi, Conseiller du Ministére des Affaires Etrangères; Feridoun Bey, Chef de Département au Ministère des Affaires Etrangères; Secrétaire d'Ambassade Ohan Bagdadlian Effendi; Hatchik Effendi, Navum Effendi, Chefs de Bureau au Ministère des Affaires Etrangères.

Besides these, there were in Berlin, but without any right to a seat at the congress, the Roumanian ministers, MM. Bratiano and Cogalniceano; the Montenegro Senators, Petrovitch and Radonitsch; the Servian premier, Ristics; and the Greek minister, M. Delyannis.

The Radziwill Palace, shortly before purchased by the German government, and assigned to Prince Bismarck as his official residence, immediately after being taken possession of by the new tenant, was destined to become the scene of this most distinguished diplomatic assembly. The palace, an old-fashioned structure in the flat *renaissance* characteristic of the later style of the 18th century, occupies three sides of a quadrangle, the fourth being taken up by a paved court, with a garden in front. Unpretending in size and design, the building has yet an aristocratic air. The large windows of the central section betoken noble halls; the low side wings indicate indifference to the use of space; while the obsolete architecture, and the time-worn, discoloured bricks of the roof, combine with the new pointing of the walls to show antiquity in an excellent state of repair. The interior of the building is in keeping with the front view. A wide hall and a spacious staircase lead to the central circular saloon, which was the appointed home of the congress. All the apartments are in white stucco, with Grecian columns, perhaps a little bare, but noble in their chaste and lofty simplicity. There is a special entrance to the wing inhabited by Princess Bismarck, guarded by well-proportioned statues of Germania and Borussia. Close to the saloon, the ceiling of which is decorated with the escutcheons of the various German States, is Prince Bismarck's study and a reception-hall, furnished in gorgeous Persian taste. All these rooms, with several adjoining chambers appointed as *bureaux*, were allotted to the congress. From the first three rooms large folding-doors open upon a splendid old park, the umbrageous recesses of which might be visited by the plenipotentiaries either for private *tête-à-têtes* or for recreation after the fatigues of the exhausting debates. In accordance with the taste of the prince and princess, the furniture of the house, especially in the sitting-rooms, is very unpretending. The prince himself was in good health, the excitement of the grand meeting acting as a tonic upon his poor susceptible nerves. So that there was no further talk of his resignation, which had been spoken of, as it always is when things go wrong—that is, not exactly to his mind.

But though Prince Bismarck was nominally the central planet round which the rest of the brilliant galaxy revolved, Lord Beaconsfield was a star of more than the first magnitude, difficult as it may be to imagine such a dimension.

The reception given to Lord Beaconsfield, on the one hand, and Prince Gortschakoff on the other, offered a significant contrast. Lord Beaconsfield's journey from the German frontier to Berlin was a veritable triumph. Curiosity and enthusiasm everywhere prevailed, and people thronged to the station to see him. At Cologne, where there was two hours' notice of his approach, the station was invaded by Germans, who greeted him with hurrahs; and had he looked round him, he might have seen the Grand Duke of Oldenburg, who, not wishing to make himself conspicuous, took off his hat like the rest of the crowd. On re-entering the saloon, Lord Beaconsfield found it decorated with flowers; and when, on starting, he expressed his thanks for this attention, and sent a rose to the lady who superintended these arrangements, fresh cheers greeted this act of gallantry. At Berlin there was the same eagerness; and here, in the Kaiserhof Hotel, the Crown Princess prepared a mark of distinction by a present of flowers and strawberries from the new palace nurseries at Potsdam—a present which gave rise to many pleasant remarks that a dukedom was waiting for the successful earl. Nothing of the kind, however, was there for Prince Gortschakoff. He knew that the man against whom he had so long been pitted was receiving the homage of Germany, which was indifferent about himself. His arrival made no stir,

nor disturbed the usual solitude prevailing around the Russian embassy. Here, however, was the very danger which engaged the attention of all the prominent members of the congress. The simultaneous presence of Lord Beaconsfield and Prince Gortschakoff was one, and perhaps the principal, cause which might derange all calculations. The latter was in a state of health which made him nervous. He felt that he was nearing his end, and he would not have liked to sink below the horizon without leaving behind him a ray of glory. He would not have liked to end with a defeat. Lord Beaconsfield, younger and in better preservation than the prince, was at the pinnacle of his career, and aspired to a crowning triumph. Between the two men any question might become a personal one, and reason would then no longer suffice to solve it. The great and only chance of averting this danger lay with Prince Bismarck, who, for many reasons, did not at that moment desire to see a conflict break out that might have involved himself, as it undoubtedly would have done had the congress dissolved without agreeing. What might happen afterwards did not so much matter.

Punctually at the appointed time, June 13th, at two o'clock, the first sitting of the congress was opened by Prince Bismarck in the grand hall of his new official residence. An hour before the meeting a crowd assembled in the Wilhelmstrasse to see the plenipotentiaries alight. The first to arrive were the Italian ambassadors, Count Corti and Count Launay, in grand uniforms covered with gold lace and embroidery. They were speedily followed by Count Andrassy, dressed as a Honved hussar, and Count Karolyi, conspicuous in the furred cloak peculiar to the Hungarian magnate. Then came, in official garb, Prince Gortschakoff and Baron D'Oubril, Baron Haymerle, Count Schouvaloff, M. Waddington, Count St. Vallier, and the German and British plenipotentiaries. The first sitting was entirely taken up with the exchange of credentials and other indispensable preliminaries.

The moment of the opening of the congress was marked by the hoisting of the German standard on the flag-staff of the Chancellor's mansion. Prince Bismarck invited the members to take their seats at the semicircular table placed in the centre of the spacious hall, where they sat according to the alphabetical order of the names of the countries represented by them.

At the commencement of the sitting, as pre-arranged, Count Andrassy, in the name of all the members of the congress, expressed the hope that the health of his majesty would soon be restored, and mentioned the unanimous anxiety of Europe for his prompt recovery. Count Andrassy also expressed the satisfaction of the plenipotentiaries at the reception Germany had given them. Prince Bismarck replied, expressing his belief in the success of the congress, and his particular desire to see perfect harmony established among the eminent representatives of Europe. The appointment of secretaries to the congress was then proceeded with, Herr Bucher and M. de Mouy being chosen. Deputy-secretaries, in case of their absence, were also nominated. Prince Herbert Bismarck was among the latter. The secretaries were then immediately introduced and officially presented to the congress by Prince Bismarck. Prince Bismarck then solicited secrecy for the deliberations. The members present agreed to this, but no promise or oath was demanded. Lord Beaconsfield then addressed the congress upon the advisability of withdrawing the Russian and British forces from before Constantinople; but Count Schouvaloff objected on the score of the danger of an outbreak. Here the matter dropped, and it was then resolved to adjourn till Monday, in order to give the members time to become personally better acquainted with each other, and to negotiate between themselves as much as possible before the divers subjects were broached in congress itself.

The day then wound up with a grand dinner at the palace; whilst the Crown Princess invited Lord Beaconsfield to a domestic tea, Lord Salisbury remaining at work in the English embassy.

So far, therefore—that is, for twelve hours—everything had passed off most happily. So did the first twelve hours of the following day; but then there came a thunderbolt.

The very day after congress had met, and its members pledged themselves to secrecy, the *Globe* printed the text of an agreement between the governments of England and Russia, signed at the Foreign Office on the 30th of May. The agreement comprised two memorandums. The title of the first memorandum was, "Project of a Memorandum determining the points upon which

an understanding has been established between the governments of Russia and Great Britain, and which will serve as a mutual engagement for the Russian and English plenipotentiaries at the congress."

After a preamble, expressing the desire of the Russian and English governments to establish an understanding that may obviate the settlement of the Eastern Question by the sword, the memorandum runs thus:—

"1. England discards the longitudinal division of Bulgaria, but the representative of Russia reserves to himself to point out the advantages of it to the congress, promising, nevertheless, not to insist upon it against the definitive opinion of England.

"2. The arrangement of the boundaries of Southern Bulgaria should be modified in such a manner as to remove them from the Ægean Sea, according to the southern delimitation of the Bulgarian provinces proposed by the conference of Constantinople. This does not concern the question of the frontiers so much as it refers to the exclusion of the littoral of the Ægean Sea—that is to say, to the west of Lagos. From this point to the coast of the Black Sea the discussion of the frontier will remain free.

"3. The western frontiers of Bulgaria should be rectified upon the base of nationalities so as to exclude from that province the non-Bulgarian populations. The western frontiers of Bulgaria ought not to pass in principle a line traced from close to Novi-Bazar to Koursha Balkan.

"4. The Bulgaria replaced in the limits which are mentioned in the points 2 and 3 shall be divided into two provinces—namely:—The one to the north of the Balkans should be endowed with political autonomy, under the government of a prince; and the other to the south of the Balkans should receive a large measure of administrative self-government (*autonomie administrative*)—for instance, like that which exists in English colonies—with a Christian governor named, with the acquiescence of Europe, for five to ten years.

"5. The Emperor of Russia attaches a peculiar importance to the retreat of the Turkish army from Southern Bulgaria. His majesty does not see any security or guarantee for the Bulgarian population in the future if the Ottoman troops are maintained there. Lord Salisbury accepts the retreat of the Turkish troops from Southern Bulgaria, but Russia will not object to what is enacted by the congress respecting the mode and the cases where the Turkish troops would be allowed to enter the southern province to resist an insurrection or invasion, whether in a state of execution or in a state of menace. England, nevertheless, reserves to herself to insist at the congress on the right of the Sultan to be able to canton troops on the frontiers of Southern Bulgaria. The representative of Russia reserves to himself, at the congress, complete liberty in the discussion of this last proposition of Lord Salisbury.

"6. The British government demands that the superior officers (*chefs supérieurs*) of the militia in Southern Bulgaria should be named by the Porte with the consent of Europe.

"7. The promises concerning Armenia stipulated by the preliminary treaty of San Stefano should not be made exclusively to Russia, but to England also.

"8. The government of her Britannic majesty taking, as well as the imperial government, a warm interest in the future organisation of the Greek provinces of the Balkan Peninsula, the Article 15 of the preliminary treaty of San Stefano shall be modified in such a manner that the other Powers, and notably England, may have, like Russia, a consulting voice in the future organisation of Epirus, Thessaly, and the other Christian provinces resting under the dominion of the Porte.

"9. In so far as the war indemnity is concerned, his majesty the emperor has never had the intention of converting it into territorial annexations, and he does not refuse to give assurances in this respect. It is understood that the war indemnity will not deprive the English government of its rights as creditor, and it will, in this respect, remain in the same state that it stood before the war. Without contesting the final decision which Russia will take with respect to the amount of the indemnity, England reserves to herself to point out to the congress the serious objections which she sees to it.

"10. As to the valley of Alashkert and the town of Bayazid, that valley being the great transit route for Persia, and having an immense value in the eyes of the Turks, his majesty the emperor consents to restore it to them; but he has demanded and obtained, in exchange, the cession to Persia of the little territory of Khotour, which the commissioners of the two mediatory Courts have found just to restore to the Shah.

"11. The government of her Britannic majesty would have to express its profound regret in the event of Russia insisting definitively upon the retrocession of Bessarabia. As, however, it is sufficiently established that the other signatories to the treaty of Paris are not ready to sustain by arms the delimitation of Roumania, stipulated in that treaty, England does not find herself sufficiently interested in this question to be authorised to incur alone the responsibility of opposing herself to the change proposed, and thus she binds herself not to dispute the decision in this sense. In consenting not to contest the desire of the Emperor of Russia to occupy the port of Batoum and to guard his conquests in Armenia, the government of her majesty do not hide from themselves that grave dangers, menacing the tranquillity of the populations of Turkey in Asia, may result in the future by this extension of the Russian frontier. But her majesty's government are of opinion that the duty of protecting the Ottoman empire from this danger, which henceforth will rest largely (*d'une mesure speciale*) upon England, can be effected without exposing Europe to the calamities of a fresh war. At the same time the government of the Queen take cognizance of the assurance given by his imperial majesty that in the future the Russian frontier will be no more extended on the side of Turkey in Asia. Her majesty's government being consequently of opinion that the modifications of the treaty of San Stefano, approved in this memorandum, suffice to mitigate the objections that they find in the treaty in its actual form, engage themselves not to dispute the articles of the preliminary treaty of San Stefano which are not modified by the ten preceding points if, after the articles have been duly discussed in congress, Russia persists in maintaining them.

"It may be, that during the discussions in congress the two governments may find it preferable to introduce, of a common accord, fresh modifications, which it would be impossible to foresee; but, if the understanding respecting these new modifications be not established between the Russian and English plenipotentiaries, the present memorandum is destined to serve as a mutual engagement in congress for the plenipotentiaries of Russia and Great Britain.

"In faith of which this document has been signed by the Russian ambassador at London and the principal Secretary of State of her Britannic majesty.—Done at London the 30th of May, 1878.

"SCHOUVALOFF.
"SALISBURY."

The second memorandum forms an annex to the first, and was signed by both plenipotentiaries on the same date. It runs as follows:—

"Besides the stipulations of the preceding memorandum, the British government reserve to themselves to point out to the congress the following points:—

"(*a*) The English government reserve to themselves to demand of the congress the participation of Europe in the administrative organisation of the two Bulgarian provinces.

"(*b*) The English government will discuss in congress the duration and the nature of the Russian occupation of Bulgaria and of the passage through Roumania.

"(*c*) The name to be given to the southern province.

"(*d*) Without touching on the territorial question, the British government reserve to themselves to discuss the questions of the navigation of the Danube, in which matter England has rights by treaty.

"(*e*) The English government reserve to themselves to discuss in congress all questions relative to the Straits. But the Russian ambassador at London takes cognizance of the verbal communication which he has made to the principal Secretary of State—that is to say, the imperial cabinet stands by the declaration of Lord Derby of the 6th of May, 1877, and notably:—'The existing arrangements made under European sanction which regulate the navigation of the Bosphorus and the Dardanelles appear to them (the British government) wise and salutary; and there would be, in their judgment, serious objections to their alteration in any material particular.' And the Russian plenipotentiary will insist at the congress on the *status quo*.

"(*f*) The English government will address to his majesty the Sultan a request to promise Europe to protect equally on Mount Athos the monks of other nationalities.

"SCHOUVALOFF.
"SALISBURY."

This memorandum was received with very mixed feelings in all quarters. It was profoundly displeasing to that faction at

St. Petersburg which thought even the treaty of San Stefano too mild, and which would have risked a conflict with England rather than have allowed the government of Constantinople to escape from a state of vassaldom to the Czar. It was equally displeasing to a large party in England. Expectations, it will be remembered, were spread before the conference of Constantinople. A small section of the public was afterwards as much annoyed as the great mass of the people was gratified by the moderate spirit of the instructions which Lord Salisbury carried to the Turkish capital, and by the proposals which he himself made for the improvement of the Ottoman empire. Precisely the same kind of surprise came to many people again. The ministerial plans for the future of Turkey were found to be national in the best sense of the term, short of delaying war, and hence they were disappointing alike to an active party which would cancel all the Russian conquests, and to another equally active band which would clear away the whole of the Ottoman administration. What, it was asked, has the government gained by obtaining the vote of credit for six millions, by bringing the Indian troops to Malta, and by constituting itself the champion of international law?

The answer is very simple. In the first place, if government had not used firm language and made military preparations—played the same game of brag, in fact, to which we have already alluded—the Russians might have done much more than enforce the treaty of San Stefano. They could have found a score of pretexts for entering Constantinople itself. In fact, the blundering and the rashness of the Turks would have given the Grand Duke Nicholas some such excuse every forty-eight hours. Perhaps he might have taken up and expressed his purpose of holding a strong position on one side or other of the Bosphorus, and thus the action of the Russian troops would have made it indescribably difficult to prevent the outbreak of another war. But the firm front of the government did much more than prevent the Russian army from passing beyond San Stefano. It also brought about some highly important changes in the conditions of peace. The first, as the agreement between the two powers shows, was in the administrative arrangements for European Turkey. The treaty of San Stefano virtually included the whole of that country within the limits of one great Bulgaria. Bosnia and Herzegovina were, indeed, left to the Porte; but, as they were cut off from Constantinople by the new province, the connexion between them and Constantinople could not have lasted for a month, though, at the same time, there cannot be the least doubt that the treaty presupposed the annexation of these provinces by Austria, to whom they were offered, and by whom they were virtually accepted. The Greek provinces were also left; but, as they were also to be separated from the capital by Bulgaria, they would also have fallen away. A strip of territory along the Black Sea and the Sea of Marmora was to remain under the direct authority of the Porte; but it was to be so small that it would have afforded little revenue and slender military protection. Thus the government of Constantinople, whatever the future character of it might be, would have had a formidable neighbour in the new State; and it is difficult to say what would have been the strength or the tendencies of such a province. That danger was prevented by the agreement of the two governments. Thus Constantinople was emancipated for the moment, at least from influences which might have been fatal to its independence. It was to be left in possession of territory not only considerably larger than the portion which was specified in the treaty of San Stefano, but stretching along the coast of the Ægean, and offering an unimpeded passage to all the provinces which were still connected with the Porte. Another great change was the division of Bulgaria into two parts. The Northern, stretching from the Danube to the Balkans, was, it is true, to be virtually independent of Constantinople; but such a change had been made inevitable by the war. The Southern Bulgaria, on the other hand, was not to receive much greater powers of self-government than those suggested by the preliminary conference of Constantinople. The Sultan would be able to appoint the chief officers of the local militia, and the congress had liberty to provide that, in case of emergency, he might garrison the strong places of the province. The two Bulgarias together were not to be so large as the one mapped out at San Stefano. That to the south of the Balkans was not to touch the Ægean or go so far to the west as in General Ignatieff's bold draught, and was

in some respects smaller than that which was sketched at the conference. Thus the Slavs were to be prevented from swamping the Greek communities on the shores of the Ægean Sea and towards the west of Turkey. Government also stipulated that it, as well as Russia, should have a share in determining the administrative arrangements of the Balkan peninsula. Both the Bulgarias were to be fashioned by the congress instead of by Russia; and, so far, the treaty of San Stefano was repealed. Nor had Russia made good her claim to decide what kind of self-government was to be given to the Greek provinces. She was to share that power with England and the rest of Europe. The memorandum of agreement showed, therefore, that government had gained much, even in European Turkey; but still more important were the stipulations with respect to the Asiatic provinces. The relinquishment of Bayazid and the valley of the Alashkert was in itself a considerable change. It was trivial, however, in comparison with the arrangements foreshadowed by some short phrases in the memorandum. The government, after stating that it would not prevent the Czar from occupying Batoum and keeping his conquests in Armenia, added that, in consequence of such an extension of the Russian frontier, the tranquillity of the populations of Turkey in Asia would probably be menaced by grave dangers. Hence it took note of the assurance given by the emperor, that the frontiers of Russia should not in future be extended further into Turkey in Asia. That was the record of a highly important pledge. It was a promise made, not to a weak government like the Porte, or to the European powers collectively, but to England individually. Thus Russia recognised the special right of England to protect the Asiatic part of the Ottoman territory. To free that point from the slightest ambiguity, Lord Salisbury inserted a still more significant phrase. The duty of guarding Turkey in Asia will henceforth, he said, "rest in a special manner on England." Thus Russia put her seal to a document which unequivocally stated that England may assert a right of guardianship over Asia Minor.

But having said so much, all that can be said in favour of the memorandum, or the policy which dictated it, is exhausted.

Though it was condoned, belauded, and exalted as a clever work, meeting the exigencies of the moment for the sake of peace, there was a deep concealed feeling against it. It was felt unworthy of England, and people were glad to forget it, and glad when it was merged in the decisions of the congress and buried out of sight, it was hoped, for ever. In two words, it was felt that this memorandum, which practically resulted in a partition of Turkey and a share of the spoil, and in defiance of former treaties, ill became a country whose boast had been, up to the last moment, that it was prepared to defend those treaties at any cost, and had fraudulently appropriated the applause of Europe on that score at the very moment its government was violating its cherished principles and treaties.

Henceforth it was easy to foresee that the decisions of the congress would be closed more or less on the principles and conditions laid down in this document. It was equally evident that some similar arrangement had been arrived at between Russia and Austria; of which arrangement England was as well aware as Austria had been aware of the Anglo-Russian agreement.

That Austria was aware of the arrangement is proved by one small but significant fact. That is, that when asked in the Austrian chamber whether the document published by the *Globe*, through the instrumentality of a writer paid at the rate of 10*d.* an hour for copying it, was authentic, Count Andrassy replied in exactly the same terms as his British colleague, the Marquis of Salisbury—that the document in question was unauthenticated and "unworthy of your lordship's confidence."

What the Anglo-Austro-Russian agreement was, became evident from the sitting on June 28th.

The sitting might well be entitled the morganatic marriage of Bosnia with Count Andrassy. It might be said that the congress, after having occupied itself with the Bulgarian drama, had now proceeded to the high Bosnian and Herzegovinian comedy. It was a patent fact, that ever since the commencement of the insurrection in Turkey, Austria had cast longing eyes towards this province, the cradle of the insurrection which resulted in the meeting of the congress. Count Andrassy's persistent coquetry had finished by triumphing over time and difficulties; but even at the last moment he had not the courage to lead the object he coveted publicly to the altar. Congress was kind enough to facilitate a morganatic

marriage between them. But though Count Andrassy only married Bosnia and Herzegovina with his left hand for the moment, it was quite well understood that it would not be long before the hand changed. In short, congress decided unanimously—the Turks excepted—that Austria should proceed to the military occupation of Bosnia, and have charge of the administration of that country. At the beginning of the sitting, Count Andrassy rose and read a *mémoire*, which might be called an indirect demand of marriage. He showed that for a whole year Austria was alarmed at the insurgent condition prevailing on her frontiers, and at the agitation which crossed them and spread into the interior of the Austrian empire. He pointed out that Austria had 150,000 Bosnian refugees on her hands, who refused to return to Bosnia while it remained under Turkish domination, which could afford them neither existence nor security, and that they would prefer to support the misery and humiliation of exile and Austrian charity to returning to their homes, either already devastated or threatened with being so later. Count Andrassy showed that Turkey was not in a position to maintain tranquillity in this province; that it would remain in a state of misery and revolutionary agitation against the domination of Turkey; that this revolutionary agitation would infallibly reach the adjoining Slav populations; and that congress, if it allowed such a state of things to exist, would have serious responsibilities as regards the future tranquillity of Europe. Count Andrassy added that he did not ask public marriage with Bosnia—that is to say, he did not ask that the province should be annexed to Austria—he only begged the congress to come to some solution; and if this solution appeared to him practical and acceptable, Austria would be the first to adhere to it.

The Marquis of Salisbury then rose, and following the example of Prince Bismarck, constituted himself the honest broker of the indirect union of Bosnia with the Austrian empire. The Marquis of Salisbury also read a *mémoire*. In it he declared that England was penetrated by the justness of the observations of the first Austrian plenipotentiary; and as his noble friend rejected public appropriation, and contented himself with left-hand annexation, he proposed to the congress to decide that Austria be charged to occupy Bosnia and Herzegovina, and administer them; that it was of public interest for Europe to place these provinces under the direct protection of a powerful State; that this State could only be the empire of Austria, which was the immediate neighbour of Bosnia and Herzegovina; and that it was on this empire that the task devolved of bringing the insurrection to an end.

M. Waddington, acting as first witness of the proposed union, then begged to be heard, and declared that, after having listened to the two papers which had just been read, he thought Lord Salisbury's proposal should be adopted by the congress in the interest of Turkey herself, seeing that the continued possession of Bosnia and Herzegovina would constitute for that power a weak point, imposing on it sacrifices out of proportion either to its own resources or those of Bosnia, and would expose it on that side to fresh troubles and fresh claims. He concluded by saying that, in the name of France, he adhered to the proposal just submitted to the congress by the Marquis of Salisbury.

Count Corti, without formulating precise restrictions, put several indirect questions, to which, however, he called for no answer. He agreed, but without any great heartiness, with the proposal submitted to congress, and no doubt thought of a future morganatic marriage between himself and—say, the Italian Tyrol!

Prince Gortschakoff adhered purely and simply to Lord Salisbury's motion without any further remarks.

Germany, in the person of Prince Bismarck, who presided over the congress, kept silent, and a moment of suspense followed. It was naturally expected that the mother of the brood whose fate was in question should also express her opinion, and perhaps, that in recalling all the trouble caused her by the province, Turkey would show herself delighted at the idea of getting rid of it in any way whatever. But the maternal heart contains unsearchable mysteries. At last the Turkish plenipotentiary rose, and he, too, read a *mémoire*. Turkey, he said in substance, could not possibly consent to the separation demanded of her. She was only bound, he said, by the treaty of San Stefano, and the demand in question exceeded the limits of that document. Turkey herself was in a position to protect and administer Bosnia, and what the powers proposed to do for her she could take upon herself to accom-

plish. Apart from this, however, the Turkish plenipotentiaries had formal instructions which forbade them to consent to this concession; and without wishing to hamper the work of the congress or shirk the obligations imposed on them by the decisions of this assembly, they declared they could not agree to the proposal of the Marquis of Salisbury.

Hereupon Lord Beaconsfield rose, and declared that England could not but adhere to the motion she had made—that Bosnia and Herzegovina, if left in the keeping of the Porte, would unnecessarily tend to break up that cohesive state of the empire deemed essential to her by the friends of Turkey themselves, and by those who wished to procure for Europe a lasting peace. He called to mind in a trenchant manner how Turkey, even before the war, and when still in the plenitude of her power, was not able to get the better of an insurrection which had broken out in Herzegovina, and stated that, consequently, it was impossible for Europe, in a still worse state of affairs in Turkey, to confide to the Porte the security of these provinces, which must call forth the solicitude of Europe. He concluded by calling for the adoption of the motion before the congress.

Finally, Prince Bismarck rose, and expressed his astonishment that the Turkish plenipotentiaries hesitated to yield to the unanimous opinion of the congress. He reminded them that the congress, by efforts which had been uninterrupted, and by incessant mutual concessions, had determined to restore to Turkey provinces far more considerable than those in question, and which she had renounced by the treaty of San Stefano. With regard to the restrictive instructions referred to by the Turkish plenipotentiaries, he urged them to ask for new directions at once which would permit them to give their adhesion to the views of the congress.

The proposal of the Marquis of Salisbury was then submitted to and adopted unanimously by the members of the congress, except Turkey and Austria, who abstained from voting. Thereupon the bridegroom, Count Andrassy, rose and declared that he accepted the bride presented to him by the congress for better, for worse.

But whilst this morganatic marriage of Count Andrassy with the fair Illyria, or Bosnia, was being consummated in a matter-of-fact prosaic manner before a number of more or less amused witnesses, nobody thought that the sedate widower, the essence of all the proprieties, one of the bulwarks of the State, and a pillar of the church—perhaps even a warden of the parish church at Hughenden—had actually contracted a clandestine marriage with a lady of, to say the least, the most doubtful mythological antecedents. Yet so it was. The aged Earl of Beaconsfield had actually wedded the ever youthful, though somewhat notorious Cyprian Venus. With this fair lady he had actually been secretly passing his honeymoon at Berlin, jealously screening her charms and beauties from the gaze of the vulgar herd, until at the last moment when that delectable period was about to end, he led the fair damsel forth from her place of concealment, and proudly introduced her—not to the profane criticisms of a congress—but to the *élite* of the world assembled at Berlin—introduced her to them as his youthful bride, whom all were to admire, but none to approach with undue familiarity.

On July 9th—a few days before the signature of the treaty of Berlin—parliament was presented with a correspondence containing the terms of a convention between Great Britain and Turkey, concluded on June 4, 1878, and setting forth, in the following despatch by Lord Salisbury, some of the reasons for such a convention:—

No. 1.

The Marquis of Salisbury to Mr. Layard.

"Foreign Office, May 30th, 1878.

"Sir,—The progress of the confidential negotiations which have for some time past been in progress between her majesty's government and the government of Russia, make it probable that those articles of the treaty of San Stefano which concern European Turkey will be sufficiently modified to bring them into harmony with the interests of the other European powers, and of England in particular.

"There is, however, no such prospect with respect to that portion of the treaty which concerns Turkey in Asia. Is is sufficiently manifest that, in respect to Batoum and the fortresses north of the Araxes, the government of Russia is not prepared to recede from the stipulations to which the Porte has been led by the events of the war to consent. Her majesty's government have consequently been forced to consider the effect which these agreements, if they are neither annulled nor counteracted, will have

upon the future of the Asiatic provinces of the Ottoman empire and upon the interests of England, which are closely affected by the condition of those provinces.

"It is impossible that her majesty's government can look upon these changes with indifference. Asiatic Turkey contains populations of many different races and creeds, possessing no capacity for self-government, and no aspirations for independence, but owing their tranquillity and whatever prospect of political well-being they possess entirely to the rule of the Sultan. But the government of the Ottoman dynasty is that of an ancient but still alien conqueror, resting more upon actual power than upon the sympathies of common nationality. The defeat which the Turkish arms have sustained, and the known embarrassments of the government will produce a general belief in its decadence, and an expectation of speedy political change, which in the East are more dangerous than actual discontent to the stability of a government. If the populations of Syria, Asia Minor, and Mesopotamia see that the Porte has no guarantee for its continued existence but its own strength, they will, after the evidence which recent events have furnished of the frailty of that reliance, begin to calculate upon the speedy fall of the Ottoman domination, and to turn their eyes towards its successor.

"Even if it be certain that Batoum, and Ardahan, and Kars will not become the base from which emissaries of intrigue will issue forth, to be in due time followed by invading armies, the mere retention of them by Russia will exercise a powerful influence in disintegrating the Asiatic dominion of the Porte. As a monument of feeble defence on the one side, and successful aggression on the other, they will be regarded by the Asiatic population as foreboding the course of political history in the immediate future, and will stimulate, by the combined action of hope and fear, devotion to the power which is in the ascendant, and desertion of the power which is thought to be falling into decay.

"It is impossible for her majesty's government to accept, without making an effort to avert it, the effect which such a state of feeling would produce upon regions whose political condition deeply concerns the Oriental interests of Great Britain. They do not propose to attempt the accomplishment of this object by taking military measures for the purpose of replacing the conquered districts in the possessisn of the Porte. Such an undertaking would be arduous and costly, and would involve great calamities, and it would not be effective for the object which her majesty's government have in view, unless subsequently strengthened by precautions which can be taken almost as effectually without incurring the miseries of a preliminary war. The only provision which can furnish a substantial security for the stability of Ottoman rule in Asiatic Turkey, and which would be as essential after the re-conquest of the Russian annexations as it is now, is an engagement on the part of a power strong enough to fulfil it, that any further encroachments by Russia upon Turkish territory in Asia will be prevented by force of arms. Such an undertaking, if given fully and unreservedly, will prevent the occurrence of the contingency which would bring it into operation, and will, at the same time, give to the populations of the Asiatic provinces the requisite confidence that Turkish rule in Asia is not destined to a speedy fall.

"There are, however, two conditions which it would be necessary for the Porte to subscribe before England could give such assurance.

"Her majesty's government intimated to the Porte, on the occasion of the conference at Constantinople, that they were not prepared to sanction misgovernment and oppression; and it will be requisite, before they can enter into any agreement for the defence of the Asiatic territories of the Porte in certain eventualities, that they should be formally assured of the intention of the Porte to introduce the necessary reforms into the government of the Christian and other subjects of the Porte in these regions. It is not desirable to require more than an engagement in general terms, for the specific measures to be taken could only be defined after a more careful inquiry and deliberation than could be secured at the present juncture,

"It is not impossible that a careful selection and a faithful support of the individual officers to whom power is to be intrusted in those countries would be a more important element in the improvement of the condition of the people than even legislative changes; but the assurance required to give England a right to insist on satisfactory arrangements for these pur-

poses, will be an indispensable part of any agreement to which her majesty's government could consent. It will further be necessary, in order to enable her majesty's government efficiently to execute the engagements now proposed, that they should occupy a position near the coast of Asia Minor and Syria. The proximity of British officers, and, if necessary, British troops, will be the best security that all the objects of this agreement shall be attained. The island of Cyprus appears to them to be in all respects the most available for this object. Her majesty's government do not wish to ask the Sultan to alienate territory from his sovereignty, or to diminish the receipts which now pass into his treasury. They will, therefore, propose that, while the administration and occupation of the island shall be assigned to her majesty, the territory shall still continue to be part of the Ottoman empire, and that the excess of the revenue over the expenditure, whatever it at present may be, shall be paid over annually by the British government to the treasury of the Sultan.

"Inasmuch as the whole of this proposal is due to the annexations which Russia has made in Asiatic Turkey, and the consequences which it is apprehended will flow therefrom, it must be fully understood that if the cause of the danger should cease, the precautionary agreement will cease at the same time. If the government of Russia should at any time surrender to the Porte the territory it has acquired in Asia by the recent war, the stipulations in the proposed agreements will cease to operate, and the island will be immediately evacuated.

"I request, therefore, your Excellency to propose to the Porte to agree to a convention to the following effect, and I have to convey to you full authority to conclude the same on behalf of the government:—

"'If Batoum, Ardahan, Kars, or any of them, shall be retained by Russia, and if any attempt shall be made at any future time by Russia to take possession of any further portion of the Asiatic territories of the Sultan, as fixed by the definitive treaty of peace, England engages to join the Sultan in defending them by force of arms. In return the Sultan promises to England to introduce necessary reforms (to be agreed upon later between the two powers) into the government of the Christian and other subjects of the Porte in these territories; and, in order to enable England to make necessary provision for executing her engagement, the Sultan further consents to assign the island of Cyprus to be occupied and administered by England.'—I am, &c.,

"SALISBURY."

No. 2.

Sir A. H. Layard to the Marquis of Salisbury.

"Therapia, June 5, 1878.

"My Lord,—I have the honour to enclose the convention of defensive alliance between England and Turkey to secure the Sultan's territories in Asia for the future against Russia, signed yesterday at the imperial palace of Yeldiz by his Excellency Safvet Pasha, the Turkish Minister for Foreign Affairs, and myself, as her majesty's ambassador extraordinary and plenipotentiary.

"I have, &c.,

(Signed) "A. H. LAYARD."

(Enclosure in No. 2.)

Convention of Defensive Alliance between Great Britain and Turkey, signed June 4, 1878.

"Her majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, and his imperial majesty the Sultan, being mutually animated with the sincere desire of extending and strengthening the relations of friendship happily existing between the two empires, have resolved upon the conclusion of a convention of defensive alliance with the object of securing for the future the territories in Asia of his imperial majesty the Sultan.

"Their majesties have accordingly chosen and named as their plenipotentiaries, that is to say:—

"Her majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, the Right Honourable Austen Henry Layard, her majesty's ambassador extraordinary and minister plenipotentiary at the Sublime Porte;

"And his imperial majesty the Sultan, his Excellency Safvet Pasha, Minister for Foreign Affairs of his imperial majesty;

"Who, after having exchanged their full powers, found in due and good form, have agreed upon the following Articles:—

"ART. 1.—If Batoum, Ardahan, Kars, or any of them shall be retained by Russia, and if any attempt shall be made at any future time by Russia to take possession of any further territories of his imperial majesty the Sultan in Asia, as fixed by the definitive treaty of peace, England engages to join his imperial majesty the Sultan in defending them by force of arms.

"In return, his imperial majesty the Sultan promises to England to introduce necessary reforms, to be agreed upon later between the two powers, into the government, and for the protection of the Christian and other subjects of the Porte in these territories: and in order to enable England to make necessary provision for executing her engagement, his imperial majesty the Sultan further consents to assign the island of Cyprus to be occupied and administered by England.

"ART. 2.—The present convention shall be ratified, and the ratifications thereof shall be exchanged, within the space of one month, or sooner if possible.

"In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

"Done at Constantinople, the fourth day of June, in the year one thousand eight hundred and seventy-eight.

(L. S.) "A. H. LAYARD.
(L. S.) "SAFVET."

No. 3.

Sir A. H. Layard to the Marquis of Salisbury.

(Received July 8.)

"Therapia, July 1, 1878.

"My Lord,—I have the honour to enclose the original annex to the convention entered into between England and Turkey, for the occupation of the island of Cyprus by the former, signed this day by the grand vizier and myself.

"Your lordship will perceive that I have made the alterations in Articles 3 and 4, as instructed by your lordship, to prevent the Porte from claiming as average revenue under the third clause the yield of land which it has let or sold under the fourth. The grand vizier insisted upon inserting in Article 3 the amount of surplus of revenue over expenditure, but it is provided that the sum mentioned is to be verified hereafter.

"The Article providing that Turkey shall not be called upon, in case of the evacuation of the island, to pay for improvements, &c., was withdrawn from the annex on the assurance given by me to the grand vizier that your lordship would cause a revised Article to be framed in the sense desired by his highness, but at the same time meeting the objections put forward by your lordship.

"I have, &c.,

(Signed) "A. H. LAYARD."

(Enclosure in No. 3.)

Annex to the Convention of Defensive Alliance between Great Britain and Turkey, signed June 4, 1878.

"The Right Honourable Sir A. H. Layard, G.C.B., and his highness Safvet Pasha, now the grand vizier of his majesty the Sultan, have agreed to the following annex to the convention signed by them, as plenipotentiaries of their respective governments, on the 4th of June, 1878:—

"ANNEX.—It is understood between the two high contracting parties, that England agrees to the following conditions relating to her occupation and administration of the island of Cyprus:—

"1. That a Mussulman religious tribunal (Mehkéméi Shéri) shall continue to exist in the island, which will take exclusive cognizance of religious matters, and of no others, concerning the Mussulman population of the island.

"2. That a Mussulman resident in the island shall be named by the Board of Pious Foundations in Turkey (Evkaf), to superintend, in conjunction with a delegate to be appointed by the British authorities, the administration of the property, funds, and lands belonging to mosques, cemeteries, Mussulman schools, and other religious establishments existing in Cyprus.

"3. That England will pay to the Porte whatever is the present excess of revenue over expenditure in the island; this excess to be calculated upon and determined by the average of the last five years, stated to be 22,936 purses, to be duly verified hereafter, and to the exclusion of the produce of State and Crown lands let or sold during that period.

"4. That the Sublime Porte may freely sell and lease lands and other property in Cyprus belonging to the Ottoman Crown and State (Arazii Miriyé vé Emlaki Houmayoun), the produce of which does not form part of the revenue of the island referred to in Article 3.

"5. That the English government, through their competent authorities, may purchase compulsorily, at a fair price, land required for public improvements, or for

other public purposes, and land which is not cultivated.

"6. That if Russia restores to Turkey Kars, and the other conquests made in Armenia during the last war, the island of Cyprus will be evacuated by England, and the convention of the 4th of June, 1878, will be at an end.

"Done at Constantinople, the 1st day of July, 1878.

(Signed) "A. H. LAYARD.
"SAFVET."

This convention was a plain declaration to the world, that for the future England meant to put an end to all mischievous ambiguities regarding Turkey. Government would no longer be entangled in the snare of a common engagement for an uncertain object, such as the seventh clause of the treaty of Paris of 1856, regarding the guarantees for the integrity of the Turkish empire. As the proceedings of the congress proved, England did not abandon her right to make her voice heard, if it should seem necessary, in respect to changes in European Turkey. But the military guarantee for which she became responsible would be henceforth one and simple—*i.e.*, to resist by force of arms any future attempt by Russia to take possession of any further territories of the Sultan in Asia as fixed by the definitive treaty of peace; and an undertaking thus fully and unreservedly given could not, as Lord Salisbury urged, but tend to "prevent the occurrence of the contingency which would bring it into operation."

There was certainly much to fire the imagination in the bond which practically added Cyprus to the possessions of the English Crown. Cyprus is a type of the islands and the provinces which make up the loose fabric of the Ottoman empire. The old records of our civilisation begin in those lands, and the technicalities of the Eastern Question are blended with the most familiar names of Biblical story or classic legend. Cyprus has gone through the usual vicissitudes of places over which conquest after conquest has rolled. The Greek, the Roman, the Saracen, the Crusader, the Genoese, the Venetian, and the Turk have all in turn been its masters and woven its name into the literature of Europe. They have all used it for purposes of conquest, and for little else. The idea that the masters of a dependency should look to the welfare of its people is a modern addition to political morality, and the light of it has never shone on Cyprus. The Crusaders employed it as a resting-place, the Italian republics as a source of wealth, and the Turks as a place for the production of revenue. As the Ottoman empire has made little change in its fiscal practices, Cyprus lived under a system admirably fitted for stifling human energy, and the island is in much the same state as it was generations ago. But henceforth everything will be changed. The strength, the quietude, and the security of British rule will bring capital to the place and offer a rich field for commercial enterprise. Harbours will be deepened or constructed. There will be a naval station, and thus the constant bustle of English activity. If a railway should ever be made from any port of the Levant to the Persian Gulf, Cyprus may become a place of some commercial importance. In fact, the best news which it has ever heard in the course of its long history is, that it has passed under the rule of England. The Mussulman as well as the Christian part of the population did not fail to rejoice over the arrival of an English governor, as nations do when delivered from foreign occupation. Cyprus will now be able to profit by some of the prosperity that has come to Western lands which were peopled by wandering tribes when it had already a considerable place in history.

To England the possession will be of much maritime importance. It might have seemed that Mitylene would have been a better naval station, because it is within easy sail of the Dardanelles; but, in truth, it would always be easy for the greatest of maritime powers to close that narrow passage without permanently lying in wait at the entrance. If Constantinople is in some ways an incomparable port, it has the disadvantage of being more easily sealed up than many naval stations even of the fifth and sixth magnitude. Cyprus, on the other hand, is much better adapted for protecting the most important link in the chain of British communications with the sea, since it is the nearest island to the Suez Canal. Short of a position in Egypt close to the Canal itself, Cyprus is the best place that England could have occupied. But for many reasons the taking of Egyptian territory was impracticable, and the possession of the island is attended with certain special advantages. It will enable British ships to be always in the neighbourhood of the Canal, and it will put an end to the fear that the passage

could be stopped. At the same time it practically makes England the master of Syria. It has sometimes been predicted that Russia would gradually steal through Armenia until she should reach the Gulf of Alexandretta, and thus make herself a Mediterranean power. In still bolder flights of fancy it has been supposed that she would push through the Syrian Desert until she should reach Egypt, and cut off the route to India. These are not very wise speculations. But, even if they were once high probabilities, they need now cause no alarm. Cyprus closes the Gulf of Scanderoon, the point to which Russia would naturally come if she should meet with no resistance, and the port of the same name could at any time be occupied by British ships. It is one of the finest natural harbours in the world. Indeed, some enthusiastic witnesses maintain that it is the finest. Others qualify the description by saying that, at certain seasons of the year, the violence of the winds makes the anchorage uncertain. There can be no doubt, at least, that the place is made terribly unhealthy by the marshes with which it is surrounded. Still, if the port were to become necessary for any of the purposes specified in the engagement with Turkey, those marshes might be drained. Batoum, which was once very unhealthy, is said to have lost its bad repute since the draining of the marshes behind the town. And such is the configuration of the coast, that the power which commands any one part of the way can bar the whole of the coast-road to Egypt. The space between the mountains and the sea is so narrow that, sallying from Cyprus or Alexandretta, a naval power could cut it at any point. As for the idea that an invading army could gradually creep towards Egypt through the Syrian Desert, it is enough to say that England must first of all have to lose the command of the sea, and therefore the power of sending troops to positions which could be easily held by a small force.

Cyprus is thus, on the whole, the best station that could have been chosen. The Porte will now be expected to develop the vast natural resources of its Asiatic empire, or, at least, to let that task be done by others. The country must now be opened up by roads, and, perhaps, by railways. Something more will doubtless be heard of the scheme to construct a railway through the Euphrates or the Tigris Valley—a proposition which the select committee of the House of Commons investigated in 1872, and to which it gave a qualified assent. A good many facts and opinions may then be culled from the evidence of the witnesses against as well as for the project. To construct a line through more than 900 miles of thinly populated and sometimes desert country would certainly be a bold enterprise. But, if the government should think that such a railway is necessary to insure the safety of British communications with India, the starting-point would in any case be commanded by Cyprus. That island will, in fact, be an admirable naval station, whether for the purpose of protecting the Suez Canal, securing a second road to India, or giving Great Britain the requisite authority in its relations with the Porte.

With this convention, the Anglo-Russian agreement, and the Austro-Hungarian commission to occupy Bosnia and Herzegovina, interest in the doings of the congress culminated for the moment, and the subsequent negotiations were hurried over with but a scant show of decency; and on July 13th—just one month after the assembling of congress—the Berlin treaty of peace was signed in the Chancellor's mansion at Berlin. To perform the solemn act the plenipotentiaries appeared in uniform, attended by their secretaries and staffs. The ceremony was opened by Prince Bismarck thanking the plenipotentiaries for the zeal evinced in promoting the pacific result of the debates, and for the assistance they had kindly given him in accelerating the prompt and satisfactory despatch of business. Dwelling upon the mutual concessions made, the prince regarded them as a good omen for the future, and was fain to hope that the conciliatory attitude assumed by all parties concerned would have permanent results for the consolidation of peace.

The seven copies of the treaty, printed on parchment and bound in red morocco leather, were then placed on the table and signed by the plenipotentiaries, the seals having been previously affixed by the secretaries. The parting scene had now arrived. The French name of his country beginning with an A, Count Andrassy, according to the alphabetical order of precedence observed by the congress, rose to deliver the following address to the president of the assembly:—

"Gentlemen,—At this, the moment when our efforts have resulted in a general under-

standing, it would be impossible for us not to render homage to the eminent statesman who has directed our labours. He has invariably aimed at assuring and consolidating peace. With this in view, he has devoted all his endeavours to reconcile differences, and put an end as speedily as possible to the uncertainty which weighed so heavily on Europe. Thanks to the wisdom and the untiring energy with which our president has guided our labours, he has contributed in a high degree to the prompt success of the work of pacification which we undertook in common. I feel sure, therefore, of meeting with the unanimous assent of this august assembly in proposing to offer our warmest thanks to his most serene highness Prince Bismarck. And while we are now about to separate, I think I shall furthermore best respond to your feelings by uttering our respectful gratitude for the gracious hospitality we have received from his majesty the German emperor and his august imperial family."

All the members rose to signify their recognition of the services rendered by the German Chancellor in directing the debates. Prince Bismarck said a few words of thanks, and all was over. The sitting occupied nearly an hour. When the plenipotentiaries left the palace there was a large concourse of people in the Wilhelmplatz, waiting to profit by the last opportunity of seeing the diplomatic celebrities. Prince Gortschakoff was carried down-stairs. Lord Beaconsfield seemed in good health, and looked grave and gratified as he entered his carriage to drive to the Crown Prince's palace. M. Waddington had a private interview with Prince Bismarck after the sitting. Count Schouvaloff had his little son with him, the boy having apparently been taken to the entrance-hall to give him an opportunity of remembering the event. Princess Bismarck, Countess Bismarck, and a few other ladies looked down upon the ceremony from a box in the hall, while Herr von Werner, the painter, whose brush was to perpetuate the congress, sat at the table with the plenipotentiaries.

At six o'clock in the afternoon the Crown Prince and Crown Princess entertained 170 persons, including the plenipotentiaries, ambassadors, envoys, and entire diplomatic staff, at a grand dinner in the White Hall of the old Schloss. All the princes and princesses of the royal family were present. After the second dish his imperial highness rose and proposed the following official toast:—

"The hopes with which a month ago, in the name of the emperor, I greeted the illustrious statesmen assembled in congress have been happily realised. The work of achieving peace, so much desired by Europe, has just been crowned by their efforts. As interpreting the feelings of my august father, I rejoice to render homage to the wisdom and the spirit of conciliation which have brought about this great result. The understanding which has just been established will be a new pledge of peace and public weal. The assistance of Germany is secured beforehand in all tending to assure and preserve these great blessings. In the name of his majesty, I drink to the health of the sovereigns and governments whose representatives have signed, on this memorable date, the treaty of Berlin."

Thus ended the first act of the great drama which began in 1876, when the curtain rose upon the wild mountains and forests of Bosnia and Herzegovina, lurid with the gleam of fires, and re-echoing with the clang and clash of war.

For two long years the sanguinary scenes shifted, now to Servia, now to Montenegro, to Bulgaria, to Asia, till the curtain fell at Berlin.

Yet, scarcely was the ink dry with which the treaty of peace was written, when the curtain rose again for the second act, after a stormy overture, upon the selfsame scene which opened the first act—upon the wild mountain lands of Bosnia and Herzegovina, upon the same lurid conflagrations, and the same clang and clash of war.

Such was the first practical commentary upon the treaty of peace, which required the united labours of ninety diplomatists for thirty days to conclude.

Consequently it fully deserves a chapter to itself.

CHAPTER XXXVIII.

THE TREATY OF BERLIN.

THE following despatch from the Marquis of Salisbury, enclosing a copy of the treaty signed at Berlin, July 13, 1878, was presented to parliament on July 19, 1878.

The Marquis of Salisbury to her Majesty's Principal Secretary of State.

(Received July 15.)

"Berlin, July 13, 1878.

"Sir,—I have the honour to enclose a copy of the treaty which was signed to-day at Berlin by the seven signatory powers of the treaty of Paris.

"The treaty is one of unusual length, and enters fully into the various questions raised by the treaty of San Stefano, so far as they affect the dispositions of the treaty of Paris. The alterations which are made in the preliminary treaty are very large, and extend to nearly all the articles of that instrument. Their general effect has been to restore, with due security for good government, a very large territory to the government of the Sultan, and they tend powerfully to secure from external assault the stability and independence of his empire. Provisions having for their object to insure entire equality of all religions before the laws have been applied to all the territories affected by the treaty.

"The policy which has received the sanction of the congress of Berlin is generally coincident with that which has been sustained by her majesty's government since the treaty of San Stefano was published, and which was indicated in the circular of the 1st of April. A statement has been made, and constantly repeated, especially upon the continent, that the views set forth in that despatch have been abandoned in the subsequent action of her majesty's government. To obviate the continuance of such a misconception, it may be well to point out in detail how far the decisions to which her majesty's government have assented in the congress of Berlin correspond with the language of the circular.

"The essential contention of the circular, that the articles of the preliminary treaty, as being a departure from the treaty of Paris, must be discussed by congress as a whole, has, it is hardly necessary to say, both in theory and practice, been admitted to the largest possible extent. Of the detailed objections made in the circular to the treaty of San Stefano, the first and the most important is couched in the following terms:—

"The most important consequences to which the treaty practically leads are those which result from its action as a whole upon the nations of South-Eastern Europe. By the articles creating the new Bulgaria, a strong Slav State will be created under the auspices and control of Russia, possessing important harbours upon the shores of the Black Sea and the Archipelago, and conferring upon that power a preponderating influence over both the political and commercial relations in those seas.

"It will be so constituted as to merge in the dominant Slav majority a considerable mass of population which is Greek in race and sympathy, and which views with alarm the prospect of absorption into a community alien to it, not only in nationality, but in political tendency and religious allegiance.

"The provision by which this new State is to be subjected to a ruler whom Russia will practically choose, its administration framed by a Russian commissary, and the first working of its institutions commenced under the control of a Russian army, sufficiently indicates the political system of which in future it is to form a part.

"It will be seen that all these objections have been removed by the treaty of Berlin. It has radically changed the disposition of the vast region to which, in the treaty of San Stefano, the name of Bulgaria is given. Nearly two-thirds of it have been replaced under the direct political and military rule of the Sultan: and in this re-transfer are included Thrace and Macedonia, in which the Greek populations affected by that instrument are almost exclusively to be found. Bulgaria, speaking generally, is now confined to the river barrier of the Danube, and, consequently, has not only ceased to

possess any harbour on the Archipelago, but is removed by more than 100 miles from the neighbourhood of that sea. On the Euxine the important port of Burgas has been restored to the government of Turkey; and Bulgaria retains less than half the seaboard originally assigned to it, and possesses no other port except the roadstead of Varna, which can hardly be used for any but commercial purposes. The new Slav State, therefore, is no longer strong—no longer merges in a Slav majority any considerable mass of Greek population, and will certainly not confer upon Russia any preponderating influence over either the political or commercial relations of those seas.

"The events of the late war must for many years secure to Russia a great authority in this State, which will be assisted by affinity of language and similarity of religion. But the influences under which its institutions were to have been formed and to have commenced their working, will no longer be specially Russian. The Russian and Ottoman commissaries, who will supervise the election of the prince and the selection of a constitution by the 'notables,' will be placed under the authority of the conference of ambassadors at Constantinople, acting through a consular commission upon the spot; and the retirement of the Russian army from the province must take place before the period at which the working of the new institutions is to begin. Its administration, therefore, will be framed by others besides a Russian commissary, and the first working of its institutions will not be commenced under the control of a Russian army.

"The territorial severance from Constantinople of the provinces left under the government of the Porte by the extension of Bulgaria to the Ægean, was another of the results indicated by the circular of the 1st of April, as tending to weaken the political strength of the government of Turkey. The restriction of Bulgaria to the valley of the Danube has necessarily restored the continuity of the dominions remaining to the Porte. The special protection which is stipulated for ecclesiastics of the Russian religion, and for Russian monasteries on Mount Athos, and the power reserved to the Russian government of shaping the institutions to be given to the rest of European Turkey, were objected to by her majesty's government as tending to increase the power of the Russian empire in the countries and on the shores where a Greek population predominates.

"These exclusive stipulations have been entirely abandoned. The treaty contains large provisions for securing religious liberty to all persons, natives or foreigners, living within the Ottoman dominions; but no special privileges are created for the members of any single nation. Improved institutions will be given to Thessaly and Epirus, but their form will be determined in the last resort, not by the government of Russia, but by a European commission.

"The pecuniary indemnity, to which many objections were taken by her majesty's government, has been excluded altogether from the treaty of Berlin. The congress declined to revise a contract which was no infraction of the treaty of Paris, and which it was, therefore, within the competence of two independent powers to conclude. But declarations were made in congress, and are recorded upon the protocol, which profoundly modify its practical effect. The Russian plenipotentiaries declared that Russia would not seek to annex territory in satisfaction of the indemnity, and that they would not contend that it should be preferred either to debts guaranteed by other governments, or to debts in respect to which Turkish revenues had been hypothecated. The English plenipotentiaries declared that they could not recognise in the indemnity any claim of priority over the debts of any kind which were anterior to it in date. It results from these declarations that Turkey is not internationally bound, and cannot be compelled to pay any portion of the indemnity until the claims of the creditors of loans anterior to the war have been paid in full. If the prosperity of Turkey should ever increase to such a height as to satisfy this condition, then the indemnity may be undoubtedly demanded. But in such a contingency it will no longer be a disproportional, or even a heavy burden upon the finances of Turkey. The stipulation must be regarded as one which in its actual form is not contrary to international law, but of which the performance must, in the nature of things, be postponed to a period infinitely remote.

"The replacement under Turkish rule of Burgas, and the southern half of the seaboard of Bulgaria on the Euxine, and the strictly commercial character assigned by

the treaty to Batoum, have largely obviated the menace to the liberty of the Black Sea which was contained in the original proposals. The retrocession of the district of Bayazid necessarily removes all apprehensions of any obstacle being interposed to arrest the European trade from Trebizond to Persia.

"So far, the congress has applied an adequate remedy to all the dangers which, in the judgment of her majesty's government, were threatened by the treaty of San Stefano.

"On the other hand, the provisions of the treaty of Berlin have not withdrawn from Russia any of the Armenian strongholds which had been acquired in the late war, though a portion of the annexed district has been surrendered.

"Her majesty's government have already provided by arrangements, external to the action of the congress, suitable precautions against the dangers threatened by those annexations.

"This completes the list of the detailed objections advanced against the treaty of San Stefano in the circular of April. With the exception of those last named, which are dealt with by the recent convention with Turkey, these objections have all been met by the treaty of Berlin.

"But in that circular it was emphatically declared that it is not to any of those details, taken separately, that the opposition of England was chiefly directed. 'Their separate and individual operation, whether defensible or not, is not that which should engage the most earnest attention of the signatory Powers. Their combined effect, in addition to the results upon the Greek populations, and upon the balance of maritime power, which have been already pointed out, is to depress, almost to the point of entire subjection, the political independence of the government of Constantinople. It cannot be otherwise than a matter of extreme solicitude that that government should be so closely pressed by the political outposts of a greatly superior Power, that its independent action or even existence is almost impossible.'

"To these three cardinal objections the congress of Berlin has supplied an entire remedy. The Greek populations no longer fall within the boundaries of the autonomous Slav principality; and all Russian influence has been removed to a distance from the shores of the Ægean Sea. The same territorial arrangements have the effect of attaining the essential aim which in their recent negotiations her majesty's government have had in view—the independent existence and action of the government of Constantinople. The political outposts of Russian power have been pushed back to the region beyond the Balkans, and its opportunities for establishing influence in the reduced Bulgaria have been materially diminished.

"The Sultan's dominions have been provided with a defensible frontier, far removed from his capital. The interposition of the Austrian power between the two independent Slav States, while it withdraws from him no territory of strategical or financial value, offers him a security against renewed aggression on their part which no other possible arrangement could have furnished. Rich and extensive provinces have been restored to his rule; at the same time that careful provision against future misgovernment has been made, which will, it may be hoped, assure their loyalty, and prevent a recurrence of the calamities which have brought the Ottoman power to the verge of ruin.

"Arrangements of a different kind, but having the same end in view, have provided for the Asiatic dominions of the Sultan security for the present, and the hope of prosperity and stability in the future.

"Whether use will be made of this—probably the last—opportunity which has been thus obtained for Turkey by the interposition of the Powers of Europe, and of England in particular, or whether it is to be thrown away, will depend upon the sincerity with which Turkish statesmen now address themselves to the duties of good government and the task of reform.

"I have, &c.,

"SALISBURY."

To facilitate future reference we give the official English text of the treaty.

(Translation.)

"In the name of the Omnipotent God.

"Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, His Majesty the Emperor of Germany, King of Prussia, His Majesty the Emperor of Austria, King of Bohemia, &c., Apostolic King of Hungary, the President of the French Republic, His Majesty the King of Italy, His Majesty the Emperor of all the Russias, and His Majesty the Emperor of the Ottomans, desiring to regulate with a view to European order, conformably to the stipulations of the Treaty of Paris of 30th of March, 1856, the questions raised in the East by the events of the last years

and by the war terminated by the preliminary Treaty of San Stefano, have been unanimously of opinion that the meeting of a Congress would offer the best means of facilitating an understanding.

"Their said Majesties and the President of the French Republic have, in consequence, appointed as their Plenipotentiaries, to wit:

"Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, the Right Honourable Benjamin Disraeli, Earl of Beaconsfield, Viscount Hughenden, Peer of Parliament, Member of Her Majesty's Most Honourable Privy Council, First Lord of Her Majesty's Treasury, and Prime Minister of England; the Most Honourable Robert Arthur Talbot Gascoyne Cecil, Marquis of Salisbury, Earl of Salisbury, Viscount Cranborne, Baron Cecil, a Peer of Parliament, Member of Her Majesty's Most Honourable Privy Council, Her Majesty's Principal Secretary of State for Foreign Affairs; and the Right Honourable Lord Odo William Leopold Russell, Member of Her Majesty's Privy Council, Her Ambassador Extraordinary and Plenipotentiary at the Court of His Majesty the Emperor of Germany, King of Prussia;

"His Majesty the Emperor of Germany, King of Prussia, Otho, Prince Bismarck, His President of the Council of Ministers of Prussia, Chancellor of the Empire; Bernard Ernest de Bulow, His Minister of State and Secretary of State for Foreign Affairs; and Chlodwig Charles Victor, Prince of Hohenlohe-Schillingsfürst, Prince of Ratibor and Corvey, His Ambassador Extraordinary and Plenipotentiary to the French Republic, Great Chamberlain of the Crown of Bavaria;

"His Majesty the Emperor of Austria, King of Bohemia, &c., and King Apostolic of Hungary, Jules, Count Andrassy of Csik of Szent-Király and Karasna-Horka, Grandee of Spain of the First Class, Privy Councillor, His Minister of the Imperial Household and for Foreign Affairs, Lieutenant Field-Marshal in His Armies; Louis Count Károlyi of Nagy-Károlyi, Chamberlain and Privy Councillor, His Ambassador Extraordinary and Plenipotentiary at the Court of His Majesty the Emperor of Germany, King of Prussia; and Henri, Baron de Haymerle, Privy Councillor, His Ambassador Extraordinary and Plenipotentiary at the Court of His Majesty the King of Italy;

"The President of the French Republic, William Henry Waddington, Senator, Member of the Institute, Minister Secretary of State for Foreign Affairs; Charles Raymond de la Croix de Chevrière, Count de Saint-Vallier, Senator, French Ambassador Extraordinary and Plenipotentiary at the Court of His Majesty the Emperor of Germany, King of Prussia; and Félix Hippolyte Desprez, Councillor of State, Minister Plenipotentiary of the First Class, charged with the direction of Political Affairs at the Department for Foreign Affairs;

"His Majesty the King of Italy, Louis, Count Corti, Senator, His Minister for Foreign Affairs; and Edward, Count de Launay, His Ambassador Extraordinary and Plenipotentiary at the Court of His Majesty the Emperor of Germany, King of Prussia;

"His Majesty the Emperor of all the Russias, Alexander, Prince Gortschakoff, His Chancellor of the Empire; Peter, Count de Schouvaloff, General of Cavalry, His Aide-de-Camp General, Member of the Council of the Empire, and His Ambassador Extraordinary and Plenipotentiary at the Court of Her Britannic Majesty; and Paul d'Oubril, Privy Councillor, His Ambassador Extraordinary and Plenipotentiary at the Court of His Majesty the Emperor of Germany, King of Prussia;

"And His Majesty the Emperor of the Ottomans, Alexander Carathéodory Pasha, His Minister of Public Works; Mehemet Ali Pasha, Mushir of His Armies; and Sadoullah Bey, His Ambassador Extraordinary and Plenipotentiary at the Court of His Majesty the Emperor of Germany, King of Prussia;

"Who, according to the propositions of the Court of Austria-Hungary, and on the invitation of the Court of Germany, met at Berlin furnished with full powers, which were found in good and due form.

"An understanding having been happily established between them, they have agreed to the following stipulations:—

"ARTICLE I.—Bulgaria is constituted an autonomous and tributary principality under the suzerainty of his imperial majesty the Sultan; it will have a Christian government and a national militia.—2. The principality of Bulgaria will include the following territories:—The frontier follows on the north the right bank of the Danube from the former frontier of Servia up to a point to be determined by a European commission to the east of Silistria, and thence runs to the Black Sea to the south of Mangália, which is included in Roumanian territory. The Black Sea forms the eastern boundary of Bulgaria. On the south the frontier follows upwards from its mouth the mid-channel of the brook near which are situated the villages of Hodzakiöj, Selam-Kiöj, Aivadsik, Kulibe, Sudzuluk; crosses obliquely the valley of the Deli-Ka mcik, passes south of Belibe and Kemhalik and north of Hadzimahale after having crossed the Deli-Kamcik at 2½ kilom. above Cengei; reaches the crest at a point situated between Tekenlik and Aidos-Bredza, and follows it by Karnabad Balkan, Prisevica Balkan, Kazan Balkan to the north of Kotel as far as Demir Kapu. It proceeds by the principal chain of the Great Balkan, the whole length of which it follows up to the summit of Kosica. There it leaves the crest of the Balkan, descends southwards between the villages of Pirtop and Duzanci, the one being left to Bulgaria and the other to Eastern Roumelia, as far as the brook of Tuzlu Dere, follows that stream to its junction with the Topolnica, then the latter river until it meets the Smovskio Dere near the village of Petricevo, leaving to Eastern Roumelia a zone with a radius of 2 kilom. above that junction, ascends between the brooks of Smovskio Dere and the Kamenica, following the line of the watershed so as to turn to the south-west at the level of Voinjak and reach directly the point 875 of the Austrian Staff map. The frontier line cuts at right angles the upper basin of the brook of Ichtiman Dere, passes between Bogdina and Karaúla, so as to rejoin the line of the watershed separating the basins of the Isker and the Marica, between Camurli and Hadzilar, follows that line by the summits of Velina Mogila, the 'col' 531, Zmailica Vrh, Sumnatica, and adjoins the administrative boundary of the Sandjak of Sofia between Sivri Tas and Cadir Tepe. From Cadir Tepe, the frontier, taking a south-westerly direction, follows the watershed between the basins of the Mesta Karasu on the one side and the Struma Karasu on the other, runs along the crests of the mountains of Rhodope called Demir Kapu, Iskoftepe, Kadimesar Balkan, and Aiji Gedük up to Kapetnik Balkan, and thus joins the former administrative frontier of the Sandjak of Sofia. From Kapetnik Balkan the frontier is indicated by the watershed between the valleys of the Rilska reka and of the Bistrica reka, and follows the ridge called Vodenica Planina, descending into the valley of the Struma at the junction of this river with the Rilska reka, leaving the village of Barakli to Turkey. It ascends then south of the village of Jelesnica, and reaches by the shortest line the chain of Golema Planina at the summit of Gitka, and rejoins there the former administrative frontier of the Sandjak of Sofia, leaving, however, to Turkey the whole of the basin of the Suha reka. From Mount Gitka the western frontier goes towards Mount Crni Vrh by the mountains of Karvena Jabuka, following the former administrative limit of the Sandjak of Sofia in the upper part of the basins of Egrisu and of the Lepnica, ascends with it the crests of Babina Polana, and reachesMount Crni Vrh. From Mount Crni Vrh the frontier follows the watershed between the Struma and the Morava by the summits of the Streser, Vilogolo, and Mesid Planina, rejoins by the Gacina, Crna Trava, Darkovska, and Drainica Plan, then the Descani Kladanec, the watershed of the High Sukowa and of the Morava, goes straight to the Stol, and descends from it so as to cut the road from Sofia to Pirot, 1,000 metres north-west of the village of Segusa. It ascends in a straight line the Vidlic Planina and thence Mount Radocina in the chain of the Kodza Balkan, leaving to Servia the village of Doikinci, and to Bulgaria that of Senakos. From the summit of Mount Radocina the frontier follows towards the west the crest of the Balkans by Ciprovec Balkan and Stara Planina up to the former eastern frontier of the principality of Servia, near to the Kula Smiljova Cuka, and thence that former frontier as far as the Danube, which it rejoins at Rakovitza. This delimitation shall be fixed on the spot by the European commission, on which the signatory Powers shall be represented. It is understood —*a*. That this commission will take into consideration the necessity for his imperial majesty the Sultan to be able to defend the Balkan frontiers of Eastern Roumelia. —*b*. That no fortifications may be erected within a radius of 10 kilom. from Samakow.—3. The Prince of Bulgaria shall be freely elected by the population, and confirmed by the Sublime Porte, with the assent of the Powers. No member of the reigning dynasties of the great European Powers may be elected Prince of Bulgaria. In case of a vacancy in the princely dignity, the election of the new prince shall take place under the same conditions and with the same forms.—4. An assembly of notables of Bulgaria, convoked at Tirnova, shall, before the election of the prince, draw up the organic law of the principality. In the districts where Bulgarians are intermixed with Turkish, Roumanian, Greek, or other populations, the rights and interests of these populations shall be taken into consideration as regards the elections and the drawing up of the organic law.—5. The following points shall form the basis of the public law of Bulgaria:—The difference of religious creeds and confessions shall not be alleged against any person as a ground for exclusion or incapacity in matters relating to the enjoyment of civil and political rights, admission to public employments, functions, and honours, or the exercise of the various professions and industries in any locality whatsoever. The freedom and outward exercise of all forms of worship are assured to all persons belonging to Bulgaria, as well as to foreigners, and no hindrance shall be offered either to the hierarchical organisation of the different communions, or to their relations with their spiritual chiefs.—6. The provisional administration of Bulgaria shall be under the direction of an imperial Russian commissary until the completion of the organic law. An imperial Turkish commissary, as well as the consuls delegated *ad hoc* by the other Powers, signatory of the present Treaty, shall be called to assist him so as to control the working of this provisional *regime*. In case of disagreement amongst the consular delegates, the vote of the majority shall be accepted, and in case of a divergence between the majority and the imperial Russian commissary or the imperial Turkish commissary, the representatives of the signatory Powers at Constantinople, assembled in conference, shall give their decision.—7. The provisional *régime* shall not be prolonged beyond a period of nine months from the exchange of the ratifications of the present Treaty. When the organic law is completed the election of the Prince of Bulgaria shall be proceeded with immediately. As soon as the prince shall have been installed, the new organisation shall be put into force, and the principality shall enter into the full enjoyment of its autonomy.—8. The treaties of commerce and of navigation as well as all the conventions and arrangements concluded between foreign Powers and the Porte, and now in force, are maintained in the principality of Bulgaria, and no change shall be made in them with regard to any Power without its previous consent. No transit duties shall be levied in Bulgaria on goods passing through that principality. The subjects and citizens and commerce of all the Powers shall be treated in the principality on a footing of strict equality. The immunities and privileges of foreigners, as well as the rights of consular jurisdiction and protection as established by the capitulations and usages, shall remain in full force so long as they shall not have been modified with the consent of the parties concerned.—9. The amount of the annual tribute which the principality of Bulgaria shall pay to the Suzerain Court— such amount being paid into whatever bank the Porte may hereafter designate—shall be fixed by an agreement between the Powers signatory of the present Treaty at the close of the first year of the working of the new organisation. This tribute shall be calculated on the mean revenue of the territory of the principality. As Bulgaria is to bear a portion of the public debt of the empire, when the Powers fix the tribute they shall take into consideration what portion of that debt can, on the basis of a fair proportion, be assigned to the principality.—10. Bulgaria takes the place of the imperial Ottoman government in its undertakings and obligations towards the Rustchuk-Varna Railway Company, dating from the exchange of the ratifications of the present Treaty. The settlement of the previous accounts is reserved for an understanding between the Sublime Porte, the government of the principality, and the administration of this company. The principality of Bulgaria, likewise, so far as it is concerned, takes the place of the Sublime Porte in the engagements which the latter has contracted, as well towards Austria-Hungary as towards the company, for working the railways of European Turkey in respect to the completion and connection, as well as the working of the railways situated in its territory. The conventions necessary for the settlement of these questions shall be concluded between Austria-Hungary, the Porte, Servia, and the principality of Bulgaria immediately after the conclusion of peace.—11. The Ottoman army shall no longer remain in Bulgaria; all the old fortresses shall be razed at the expense of the principality within one year, or sooner if possible; the local government shall immediately take steps for their demolition, and shall not construct fresh ones. The Sublime Porte shall have the right of disposing as it likes of the war material and other effects belonging to the Ottoman government which may have remained in the fortresses of the Danube already evacuated in virtue of the armistice of the 31st January, as well as of those in the strongholds of Schumla and Varna.—12. Mussulman proprietors or others who may take up their abode outside the principality, may continue to hold there their real property, by farming it out, or having it administered by third parties. A Turco-Bulgarian commission shall be appointed to settle, within a period of two years, all questions relative to the mode of alienation, working, or use on the account of the Sublime Porte, of property belonging to the State and religious foundations (Vakoufs), as well as of the questions regarding the interests of private persons engaged therein. Persons belonging to the principality of Bulgaria, who shall travel or dwell in the other parts of the Ottoman empire, shall be subject to the Ottoman authorities and laws.—13. A province is formed south of the Balkans which will take the name of 'Eastern Roumelia,' and will remain under the direct political and military authority of his imperial majesty the Sultan, under conditions of administrative autonomy. It shall have a Christian governor-general.—14. Eastern Roumelia is bounded on the north and north-west by Bulgaria, and comprises the territories included by the following line:—Starting from the Black Sea the frontier follows upwards from its mouth the mid-channel of the brook near which are situated the villages of Hodzakiöj, Selam-Kiöj, Aivadsik, Kulibe, Sudzuluk, crosses obliquely the valley of the Deli Kamcik, passes south of Belibe and Kemhalik, and north of Hadzimahale, after having crossed the Deli-Kamcik at 2½ kilom. above

Cengei; reaches the crest at a point situated between Tekenlik and Aidos-Bredza, and follows it by Karnabad Balkan, Prisevica Balkan, Kazan Balkan to the north of Kotel as far as Demir Kapu. It proceeds by the principal chain of the Great Balkan, the whole length of which it follows up to the summit of Kosica. At this point the western frontier of Roumelia leaves the crest of the Balkan, descends southwards between the villages of Pirtop and Duzanci—the one being left to Bulgaria and the other to Eastern Roumelia, as far as the brook of Tuzlu Dere, follows that stream to its junction with the Topolnica, then the latter river until it meets the Smovskio Dere near the village of Petricevo, leaving to Eastern Roumelia a zone with a radius of 2 kilom. above that junction, ascends between the brooks of Smovskio Dere and the Kamenica, following the line of the watershed so as to turn to the south-west at the level of Voinjak and reach directly the point 875 of the Austrian Staff map. The frontier line cuts at right angles the upper basin of the brook of Ichtiman Dere, passes between Bogdina and Karaúla, so as to rejoin the line of the watershed separating the basins of the Isker and the Marica, between Camurli and Hadzilar, follows that line by the summits of Velina Mogila, the 'col' 531, Zmailica Vrh, Sumnatica, and rejoins the administrative boundary of the Sandjak of Sofia between Sivri Tas and Cadir Tepe. The frontier of Roumelia leaves that of Bulgaria at Mount Cadir Tepe, following the line of the watershed between the basins of the Marica and of its affluents on one side, and of the Mesta Karasu and of its affluents on the other, and takes the direction south-east and then south along the crest of the Despoto Dagh Mountains, towards Mount Kruschowa (whence starts the frontier line of the Treaty of San Stefano). From Mount Kruschowa the frontier is the same as the line laid down by the Treaty of San Stefano; that is to say, the chain of the Black Balkans (Kara Balkan), the mountains Kulaghy-Dagh, Eschek-Tschepellü, Karakolas, and Ischiklar, from whence it descends due south-east till it reaches the river Arda, and follows the mid-channel of this river up to a point close to the village of Adacali, which remains to Turkey. From this point the frontier line ascends the crest of the Bestepe-Dagh, which it follows, then descends and crosses the Maritza, at a point situated 5 kilom. above the bridge of Mustafa Pasha; thence it takes a northerly direction by the line of the watershed between Demirhanli Dere and the small affluents of the Maritza to Küdeler Baïr, whence it runs east to Sakar Baïr; from this point it crosses the valley of the Tundza in the direction of Büjük Derbend, which is left to the north, as also is Soudzak. From Büjük Derbend it regains the line of the watershed between the affluents of the Tundza on the north and those of the Maritza on the south, up to the level of Kaibilar, which is included in Eastern Roumelia, and passes to the south of V. Almali between the basin of the Maritza to the south and the various streams which flow straight into the Black Sea, between the villages of Belevrin and Alatli; it follows to the north of Karanlik the crests of Vosna and Zuvak, the line which separates the waters of the Duka and those of the Karagac-Su, and rejoins the Black Sea between those two rivers.—15. His majesty the Sultan shall have the right of providing for the defence of the land and sea frontiers of the province by erecting fortifications on those frontiers, and maintaining troops there. Internal order is maintained in Eastern Roumelia by a native gendarmerie assisted by a local militia. In forming these corps, the officers of which are nominated by the Sultan, regard shall be paid in the different localities to the religion of the inhabitants. His imperial majesty the Sultan undertakes not to employ irregular troops, such as Bashi-Bazouks and Circassians, in the garrisons of the frontiers. The regular troops detailed for this service must not in any case be billeted on the inhabitants. When they pass through the province they shall not make a stay there.—16. The governor-general shall have the right of summoning the Ottoman troops in the event of the internal or external security of the province being threatened. In such an eventuality the Sublime Porte shall inform the representatives of the Powers at Constantinople of such a decision, as well as of the exigencies which justify it.—17. The governor-general of Eastern Roumelia shall be nominated by the Sublime Porte, with the assent of the Powers, for a term of five years.—18. Immediately after the exchange of the ratifications of the present Treaty, a European commission shall be formed to arrange, in concert with the Ottoman Porte, the organisation of Eastern Roumelia. This commission will have to determine, within three months, the powers and functions of the governor-general, as well as the administrative, judicial, and financial system of the province, taking as its basis the various laws for the vilayets and the proposals made in the eighth sitting of the Conference of Constantinople. The whole of the arrangements determined on for Eastern Roumelia shall form the subject of an imperial firman, which will be issued by the Sublime Porte, and which it will communicate to the Powers.—19. The European commission shall be charged to administer, in concert with the Sublime Porte, the finances of the province until the completion of the new organisation.—20. The treaties, conventions, and international arrangements of any kind whatsoever, concluded or to be concluded between the Porte and foreign Powers, shall apply in Eastern Roumelia as in the whole Ottoman empire. The immunities and privileges acquired by foreigners, whatever their status, shall be respected in this province. The Sublime Porte undertakes to enforce there the general laws of the empire on religious liberty in favour of all forms of worship.—21. The rights and obligations of the Sublime Porte with regard to the railways of Eastern Roumelia are maintained in their integrity.—22. The strength of the Russian corps of occupation in Bulgaria and Eastern Roumelia, which shall be composed of six divisions of infantry and two divisions of cavalry, shall not exceed 50,000 men. It shall be maintained at the expense of the country occupied. The army of occupation will preserve its communications with Russia not only through Roumania, in accordance with arrangements to be concluded between the two States, but also through the ports of the Black Sea, Varna, and Bourgas, where it may, during the period of occupation, organise the necessary depôts. The period of the occupation of Eastern Roumelia and Bulgaria by the imperial Russian troops, is fixed at nine months from the date of the exchange of the ratifications of the present Treaty. The imperial Russian government undertakes that within a further period of three months the passage of its troops across Roumania shall cease, and that principality shall be completely evacuated.—23. The Sublime Porte undertakes scrupulously to apply in the Island of Crete the organic law of 1868, with such modifications as may be considered equitable. Similar laws adapted to local requirements, excepting as regards the exemption from taxation granted to Crete, shall also be introduced into the other parts of Turkey in Europe for which no special organisation has been provided by the present Treaty. The Sublime Porte shall depute special commissions, in which the native element shall be largely represented, to settle the details of the new laws in each province. The schemes of organisation resulting from these labours shall be submitted for examination to the Sublime Porte, which, before promulgating the Acts for putting them into force, shall consult the European commission instituted for Eastern Roumelia.—24. In the event of the Sublime Porte and Greece being unable to agree upon the rectification of frontier suggested in the 13th Protocol of the Congress of Berlin, Germany, Austria-Hungary, France, Great Britain, Italy, and Russia reserve to themselves to offer their mediation to the two parties to facilitate negotiations.—25. The provinces of Bosnia and Herzegovina shall be occupied and administered by Austria-Hungary. The government of Austria-Hungary, not desiring to undertake the administration of the Sandjak of Novi-Bazar, which extends between Servia and Montenegro in a south-easterly direction to the other side of Mitrovitza, the Ottoman administration will continue to exercise its functions there. Nevertheless, in order to assure the maintenance of the new political state of affairs, as well as freedom and security of communications, Austria-Hungary reserves the right of keeping garrisons and having military and commercial roads in the whole of this part of the ancient vilayet of Bosnia. To this end the governments of Austria-Hungary and Turkey reserve to themselves to come to an understanding on the details.—26. The independence of Montenegro is recognised by the Sublime Porte and by all those of the high contracting parties who had not hitherto admitted it.—27. The high contracting parties are agreed on the following conditions:—In Montenegro the difference of religious creeds and confessions shall not be alleged against any person as a ground for exclusion or incapacity in matters relating to the enjoyment of civil and political rights, admission to public employments, functions, and honours, or the exercise of the various professions and industries in any locality whatsoever. The freedom and outward exercise of all forms of worship shall be assured to all persons belonging to Montenegro, as well as to foreigners, and no hindrance shall be offered either to the hierarchical organisation of the different communions, or to their relations with their spiritual chiefs.—28. The new frontiers of Montenegro are fixed as follows:—Starting at Ilino-brdo to the north of Klobuk, the line descends to the Trebinjcica towards Grancarevo, which remains to Herzegovina, then ascends the course of that river up to a point 1 kilom. below its confluence with the Cepelica, and from thence passes by the most direct line on to the heights which border the river Trebinjcica. It then proceeds in the direction of Pilatova, leaving that village to Montenegro, and continues along the heights in a northerly direction, maintaining as far as possible a distance of 6 kilom. from the Bilek-Korito-Gacko road, up to the 'col' between the Somina Planina and Mount Curilo, whence it proceeds in an easterly direction by Vratkovici, leaving this village to Herzegovina, up to Mount Orline. Starting from this point, the frontier, leaving Ravno to Montenegro, goes straight to the north-north-east, crossing the summits of the Lebersnik and of the Volujak, then descends by the shortest line on to the river Piva, which it crosses, and rejoins the river Tara, passing between Crkvica and Nedvina. From this point it ascends the Tara to Mojkovac, from which place it passes along the crest of the ridge as far as Siskojezero. Leaving this point, it coincides with the former frontier as far as the village of Sekulare. From there the new frontier passes along the crests of the Mokra Planina, the village of Mokra remaining to Montenegro; it then reaches the point 2166 on the Austrian Staff map, following the principal chain and the line of the watershed between the Lim on the one side, and the Drin as well as the Cievna (Zem) on the other. It then coincides with the existing boundaries between the tribe of the Kuci-Drekalovici on one side, and the Kucka-Krajna, as well as the tribes of the Klementi and Grudi, on the other, to the plain of Podgorica, from whence it proceeds towards Plavnica, leaving the Klementi, Grudi, and Hoti tribes to Albania. Thence the new frontier crosses the lake near the Islet of Gorica-Topal, and, from Gorica-Topal, takes a straight line to the top of the crest, whence it follows the watershed between Megured and Kalimed, leaving Mrkovic to Montenegro, and reaching the Adriatic at V. Kruci. On the north-west the frontier will be formed by a line passing from the coast between the villages of Susana and Zubci, and terminating at the extreme south-east point of the existing frontier of Montenegro on the Vrsuta Planina.—29. Antivari and its sea-board are annexed to Montenegro under the following conditions:—The districts situated to the south of that territory, in accordance with the delimitation above laid down, as far as the Boyana, including Dulcinjo, shall be restored to Turkey. The commune of Spica, as far as the southernmost point of the territory indicated in the detailed description of the frontiers, shall be incorporated with Dalmatia. Montenegro shall have full and complete freedom of navigation on the Boyana. No fortifications shall be constructed on the course of that river except such as may be necessary for the local defence of the stronghold of Scutari, and they shall not extend beyond a distance of 6 kilom. from that town. Montenegro shall have neither ships of war nor flag of war. The port of Antivari and all the waters of Montenegro shall remain closed to the ships of war of all nations. The fortifications situated on Montenegrin territory between the lake and the coast shall be razed, and none shall be rebuilt within this zone. The administration of the maritime and sanitary police, both at Antivari and along the coast of Montenegro, shall be carried out by Austria-Hungary by means of light coast-guard boats. Montenegro shall adopt the maritime code in force in Dalmatia. On her side Austria-Hungary undertakes to grant consular protection to the Montenegrin merchant flag. Montenegro shall come to an understanding with Austria-Hungary on the right to construct and keep up across the new Montenegrin territory a road and a railway. Absolute freedom of communication shall be guaranteed on these roads.—30. Mussulmans or others possessing property in the territories annexed to Montenegro, who may wish to take up their residence outside the principality, can retain their real property either by farming it out, or by having it administered by third parties. No one shall be liable to be expropriated otherwise than by legal process for the public welfare, and with a previous indemnity. A Turco-Montenegrin commission shall be appointed to settle, within a period of three years, all questions relative to the mode of alienation, working, or use, on the account of the Sublime Porte, of property belonging to the State and religious foundations (Vakoufs), as well as of the questions regarding the interests of private parties engaged therein.—31. The principality of Montenegro shall come to a direct understanding with the Ottoman Porte with regard to the establishment of Montenegrin agents at Constantinople, and at certain places in the Ottoman empire where the necessity for them shall be admitted. Montenegrins travelling or residing in the Ottoman empire shall be subject to the Ottoman laws and authorities, according to the general principles of international law, and the customs established with regard to Montenegrins.—32. The Montenegrin troops shall be bound to evacuate within twenty days from the date of the ratification of the present Treaty, or sooner if possible, the territory that they occupy at present beyond the new limits of the principality. The Ottoman troops shall evacuate the territories ceded to Montenegro within the same period of twenty days. A supplementary period of fifteen days shall, however, be granted to them, as well for evacuating the fortresses and withdrawing the stores and material of war from them, as for drawing up inventories of the implements and articles which cannot be immediately removed.—33. As Montenegro is to bear a portion of the Ottoman public debt for the new territories assigned to her by the Treaty of Peace, the representatives of the Powers at Constantinople shall determine the amount of the same in concert with the Sublime Porte on an equitable basis.—34. The high contracting parties recognise the independence of the principality of Servia, subject to the conditions set forth in the following Article.—35. In Servia the difference of religious creeds and confessions shall not be alleged against any person as a ground for exclusion or incapacity in matters relating to the enjoyment of civil and political rights, admission to public employments, functions, and honours, or the exercise of the various professions and industries, in any locality whatsoever. The

freedom and outward exercise of all forms of worship shall be assured to all persons belonging to Servia, as well as to foreigners, and no hindrance shall be offered either to the hierarchical organisation of the different communions, or to their relations with their spiritual chiefs. —36. Servia receives the territories included in the following delimitation :—The new frontier follows the existing line ascending the mid-channel of the Drina from its confluence with the Save, leaving Mali Zwornik and Sakhar to the principality, and continues to follow the former boundary of Servia as far as the Kopaonik, leaving it at the summit of the Kanilug. From that point it follows at first the western boundary of the Sandjak of Nisch by the southern spur of the Kopaonik, by the crests of the Marica and Mrdar Planina, which form the watershed between the basins of the Ibar and Sitnica on one side, and that of the Toplica on the other, leaving Prepolac to Turkey. It then turns to the south by the watershed between the Brvenica and the Medvedja, leaving the whole of the basin of the Medvedja to Servia ; follows the crests of the Goljak Planina (which forms the watershed between the Kriva-Rjeka on one side, and the Poljanica, Veternica, and Morawa on the other), as far as the summit of the Poljanica. It then follows the spur of the Karpina Planina as far as the confluence of the Koinska and the Morawa, crosses this river, and ascends by the watershed between the Koinska brook and the stream which falls into the Morawa near Neradovce, to reach the Sv. Ilija Planina above Trgoviste. Thence it follows the crest of the Sv. Ilija as far as Mount Kljuc, and passing by the points marked 1516 and 1547 on the map, and by the Babina Gora, it reaches Mount Crni-Vrh. From Mount Crni-Vrh, the new delimitation coincides with that of Bulgaria, that is to say :—The line of frontier follows the watershed between the Struma and the Morava by the summits of Streser, Vilogolo, and Mesid Planina, rejoins by the Gacina, Crna Trava, Darkovska, and Drainica Plan, then the Descani Kladanec, the watershed of the High Sukowa and of the Morava, goes straight to the Stol, and descends from it so as to cut the road from Sofia to Pirot, 1,000 metres north-west of the village of Segusa. It ascends in a straight line the Vidlic Planina, and thence Mount Radocina in the chain of the Kodza Balkan, leaving to Servia the village of Doikinci, and to Bulgaria that of Senakos. From the summit of Mount Radocina the frontier follows towards the north-west, the crest of the Balkans by Ciprovec Balkan and Stara Planina up to the former eastern frontier of the principality of Servia, near to the Kula Smiljova cuka, and thence that former frontier as far as the Danube, which it joins at Rakovitza.—37. Until the conclusion of fresh arrangements no change shall be made in Servia in the actual conditions of the commercial intercourse of the principality with foreign countries. No transit duties shall be levied on goods passing through Servia. The immunities and privileges of foreign subjects, as well as the rights of consular jurisdiction and protection, as at present existing, shall remain in full force so long as they shall not have been modified by mutual consent between the principality and the Powers concerned.—38. The principality of Servia takes the place, so far as it is concerned, of the Sublime Porte in the engagements which the latter has contracted as well towards Austria-Hungary as towards the company for the working of the railways of Turkey in Europe, in respect to the completion and connection, as well as the working of the railways to be constructed on the territory newly acquired by the principality. The conventions necessary for settling these questions shall be concluded, immediately after the signature of the present Treaty, between Austria-Hungary, the Porte, Servia, and, within the limits of its competency, the principality of Bulgaria.—39. Mussulmans possessing property in the territories annexed to Servia, who may wish to reside outside the principality, may retain their real property, either by farming it out or by having it administered by third parties. A Turco-Servian commission shall be appointed to settle, within a period of three years, all questions relative to the mode of alienation, working, or use, on the account of the Sublime Porte, of the property belonging to the State and religious foundations (Vakoufs), as well as of the questions regarding the interests of private persons engaged therein. —40. Until the conclusion of a treaty between Turkey and Servia, Servian subjects travelling or residing in the Ottoman empire shall be treated according to the general principles of international law.—41. The Servian troops shall be bound to evacuate within fifteen days from the exchange of the ratifications of the present Treaty the territory not comprised within the new limits of the principality. The Ottoman troops shall evacuate the territories ceded to Servia within the same term of fifteen days. A supplementary term of an equal number of days shall, however, be granted to them as well for evacuating the fortresses and withdrawing the provisions and material of war as for drawing up the inventory of the implements and objects which cannot be removed at once.—42. As Servia is to bear a portion of the Ottoman public debt for the new territories assigned to her by the present Treaty, the representatives at Constantinople shall fix the amount of it in concert with the Sublime Porte on an equitable basis. —43. The high contracting parties recognise the independence of Roumania, subject to the conditions set forth in the two following articles.—44. In Roumania the difference of religious creeds and confessions shall not be alleged against any person as a ground for exclusion or incapacity in matters relating to the enjoyment of civil and political rights, admission to public employments, functions, and honours, or the exercise of the various professions and industries in any locality whatsoever. The freedom and outward exercise of all forms of worship shall be assured to all persons belonging to the Roumanian State, as well as to foreigners, and no hindrance shall be offered either to the hierarchical organisation of the different communions, or to their relations with their spiritual chiefs. The subjects and citizens of all the Powers, traders or others, shall be treated in Roumania, without distinction of creed, on a footing of perfect equality.—45. The principality of Roumania restores to his majesty the Emperor of Russia that portion of the Bessarabian territory detached from Russia by the Treaty of Paris of 1856, bounded on the west by the mid-channel of the Pruth, and on the south by the mid-channel of the Kilia Branch and the Stary-Stamboul mouth.—46. The islands forming the Delta of the Danube, as well as the Isle of Serpents, the Sandjak of Toultcha, comprising the districts (cazas) of Kilia, Soulina Mahmoudie, Isaktcha, Toultcha, Matchin, Babadagh, Hirsovo, Kustendje, Medjidie, are added to Roumania. The principality receives in addition the territory situated to the south of the Dobroutcha as far as a line starting from the east of Silistria and terminating on the Black Sea, south of Mangalia. The frontier line shall be determined on the spot by the European commission appointed for the delimitation of Bulgaria.—47. The question of the division of the waters and the fisheries shall be submitted to the arbitration of the European commission of the Danube.—48. No transit duties shall be levied in Roumania on goods passing through the principality.—49. Roumania shall have power to make conventions to determine the privileges and attributes of consuls in regard to protection within the principality. Existing rights shall remain in force so long as they shall not have been modified by the mutual consent of the principality and the parties concerned.—50. Until the conclusion of a treaty between Turkey and Roumania, fixing the privileges and attributes of consuls, Roumanian subjects travelling or residing in the Ottoman empire, and Ottoman subjects travelling or residing in Roumania, shall enjoy the rights guaranteed to the subjects of other European Powers.—51. With regard to public works and other enterprises of a like

nature, Roumania shall be substituted for the Sublime Porte as regards its rights and obligations throughout the ceded territory.—52. In order to increase the guarantees which assure the freedom of navigation on the Danube which is recognised as of European interest, the high contracting parties determine that all the fortresses and fortifications existing on the course of the river from the Iron Gates to its mouths shall be razed, and no new ones erected. No vessel of war shall navigate the Danube below the Iron Gates with the exception of vessels of light tonnage in the service of the river police and Customs. The 'stationnaires' of the Powers at the mouths of the Danube may, however, ascend the river as far as Galatz.—53. The European commission of the Danube on which Roumania shall be represented is maintained in its functions, and shall exercise them henceforth as far as Galatz in complete independence of the territorial authorities. All the treaties, arrangements, acts, and decisions relating to its rights, privileges, prerogatives, and obligations are confirmed.—54. One year before the expiration of the term assigned for the duration of the European commission the Powers shall come to an understanding as to the prolongation of its powers, or the modifications which they may consider necessary to introduce.—55. The regulations respecting navigation, river police, and supervision from the Iron Gates to Galatz shall be drawn up by the European commission, assisted by delegates of the Riverain States, and placed in harmony with those which have been or may be issued for the portion of the river below Galatz.—56. The European commission of the Danube shall come to an arrangement with the proper authorities to ensure the maintenance of the lighthouse on the Isle of Serpents.—57. The execution of the works which have for their object the removal of the obstacles which the Iron Gates and the Cataracts place in the way of navigation is entrusted to Austria-Hungary. The Riverain States on this part of the river shall afford every facility which may be required in the interest of the works. The provisions of the 6th Article of the Treaty of London of the 13th March, 1871, relating to the right of levying a provisional tax in order to cover the cost of these works, are maintained in favour of Austria-Hungary.—58. The Sublime Porte cedes to the Russian empire in Asia the territories of Ardahan, Kars, and Batoum, together with the latter port, as well as all the territories comprised between the former Russo-Turkish frontier and the following line :—The new frontier starting from the Black Sea, and coinciding with the line laid down by the Treaty of San Stefano as far as a point to the north-west of Khorda, and to the south of Artwin, continues in a straight line as far as the River Tchoroukh, crosses this river and passes to the east of Aschmichen, going in a straight line to the south so as to rejoin the Russian frontier indicated in the Treaty of San Stefano, at a point to the south of Nariman, leaving the town of Olti to Russia. From the point indicated near Nariman the frontier turns to the east, passes by Tebrenec, which remains to Russia, and continues as far as the Pennek Tschaï. It follows this river as far as Bardouz, then turns towards the south, leaving Bardouz and Jönikioy to Russia. From a point to the west of the village of Karaougan, the frontier takes the direction of Medjingert, continues in a straight line towards the summit of the mountain Kassadagh, and follows the line of the watershed between the affluents of the Araxes on the north and those of the Mourad Sou on the south, as far as the former frontier of Russia.—59. His majesty the Emperor of Russia declares that it is his intention to constitute Batoum a free port, essentially commercial.—60. The valley of Alaschkerd (arranged in detail by commission, subsequently) and the town of Bayazid, ceded to Russia by Article 19 of the Treaty of San Stefano, are restored to Turkey. The Sublime Porte cedes to Persia the town and territory of Khotour, as fixed by the mixed Anglo-Russian commission for the delimitation of the frontiers of Turkey and of Persia.—61. The Sublime Porte undertakes to carry out, without further delay, the improvements and reforms demanded by local requirements in the provinces inhabited by the Armenians, and to guarantee their security against the Circassians and Kurds. It will periodically make known the steps taken to this effect to the Powers, who will superintend their application.—62. The Sublime Porte having expressed the intention to maintain the principle of religious liberty, and give it the widest scope, the contracting parties take note of this spontaneous declaration. In no part of the Ottoman empire shall difference of religion be alleged against any person as a ground for exclusion or incapacity as regards the discharge of civil and political rights, admission to the public employments, functions and honours, or the exercise of the various professions and industries. All persons shall be admitted, without distinction of religion, to give evidence before the tribunals. The freedom and outward exercise of all forms of worship are assured to all, and no hindrance shall be offered either to the hierarchical organisation of the various communions or to their relations with their spiritual chiefs. Ecclesiastics, pilgrims, and monks of all nationalities travelling in Turkey in Europe, or in Turkey in Asia, shall enjoy the same rights, advantages, and privileges. The right of official protection by the diplomatic and consular agents of the Powers in Turkey is recognised both as regards the above-mentioned persons and their religious, charitable, and other establishments in the Holy Places and elsewhere. The rights possessed by France are expressly reserved, and it is well understood that no alterations can be made in the *status quo* in the Holy Places. The monks of Mount Athos, of whatever country they may be natives, shall be maintained in their former possessions and advantages, and shall enjoy, without any exception, complete equality of rights and prerogatives.—63. The Treaty of Paris of March 30, 1856, as well as the Treaty of London of March 13, 1871, are maintained in all such of their provisions as are not abrogated or modified by the preceding stipulations.—64. The present Treaty shall be ratified, and the ratifications exchanged at Berlin within three weeks, or sooner if possible. In faith whereof the respective plenipotentiaries have signed it, and affixed to it the seal of their arms.—Done at Berlin, the thirteenth day of the month of July, one thousand eight hundred and seventy-eight.—(Signed), Beaconsfield, Salisbury, Odo Russell, V. Bismarck, Bülow, Hohenlohe, Andrassy, Károlyi, Haymerle, Waddington, Saint-Vallier, H. Desprez, L. Corti, Launay, Gortchakow, Schouvaloff, P. D'Oubril, Al. Carathéodory, Mehemed Ali, Sadoullah."
